Re: Proposed Change to Administrative Order SWD 879

Gentlemen:

Calpine Natural Gas L.P. wishes to propose an amendment to Administrative Order SWD-879. The Order is in reference to utilizing the Roosevelt #1 (API 30-045-31448) for Salt Water Disposal. The Order called for the well to be completed in the Point Lookout (3735-3830) and Cliff House (2802-2895) formations. As a result of the proposed completion, the wellhead injection pressure was limited to 560 psi, or .2 psi times the upper most perforation (2802').

Based on conversations with other operators, Calpine completed the well in only the Point Lookout formation (3735-3830) and not the Cliff House.

Calpine proposes that the maximum wellhead injection pressure for Order SWD-879 be amended to 747 psi or .2 psi times the upper most perforation (3735').

Please feel free to call me if you have any questions.

Thanks for all your help,

Hugo Cartaya
