Mr. Joe D. Ramey
Secretary - Director
New Mexico Oil Conservation Commission
P. O. Box 2088
Santa Fe, New Mexico 87501

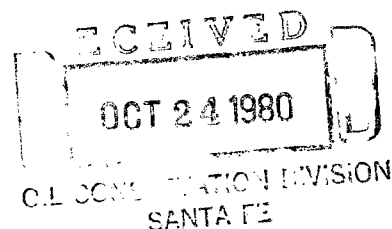

Dear Sir:

I hereby apply for administrative approval of the unorthodox location of our Berry Federal # 1 located in Section 35, T-18-S, R-32-E, Lea County, being 330' from the west and 1650' from the north lines of Section 35. This well was drilled to a total depth of 4165' as a Queen sand test in the Querecho Plains Queen Associated Field. The top of the Queen was picked at 3956' and the interval from 3969' to 4000' was perforated and swabbed and recovered 3 bbls. of formation water per hour with no shows of hydrocarbons. The well was plugged back to 3900' and the Yates zone from 3249' to 3259' was perforated, fraced and initially completed for 7 bbls. oil, 8.1 MCF of gas and 2 bbl. of water on June 25, 1980. This well was placed in the Querecho Plains - Yates Field. Further testing of this well by Phillips and El Paso revealed that it truly is a gas well. A copy of the Phillips retest shows the well flowing on a stabilized rate on a 10/64" choke of 231 MCFPD, tubing pressure of 490#. Talking to your Hobbs office they have now approved the new Querecho Plains Yates Gas Field into which this well will be placed.

Our original location, being 330' from the west line, was an orthodox location for oil in the Querecho Plains Queen Associated Field but this location now violates the 330 rule since it has become a new discovery well for the Querecho Plains Yates Gas Field.

We have sent notification by certified mail to the following off-set operators:

Petroleum Development Corp.
