Re: Melzer Exploration Company
#2 Bilberry
House Field
Lea Co., New Mexico

Dear Mr. Stogner,

By this letter Melzer Exploration Company formally applies for an "unorthodox location" for the captioned 3250' gas well under State of New Mexico Rule No. 104. This application is made necessary by conditions beyond the control of the operator; conditions which would prevent Melzer Exploration Company from attempting to drill and complete the captioned well.

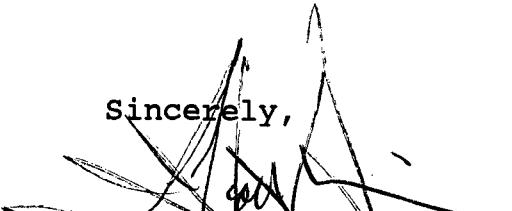

Melzer Exploration Company, operator of the west half of Section 6, T20S, R39E, Lea County had initially proposed to drill the #2 Bilberry 1980' FNL and 1980' FWL. Upon staking the well at this standard location it was noted that the survey stake for the well was located on a gas pipeline right-of-way which runs in a generally northeast to southwest direction across the west half of Section 6 (see attached map). To avoid the potential risk associated with drilling on this pipeline right-of-way, Melzer Exploration Company was forced to move the drilling location. In an effort to determine the optimum direction to move the well Melzer Exploration evaluated all of the options available to us. The options were to move the well north, across the pipeline an estimated 160 feet, move the well west or northwest across the pipeline in excess of 160' or we could move the location south 100'. A move in any direction other than south would put the well at risk geologically and increase our chances of drilling a dry or marginal well (see attached geological review and map). After due consideration of these options, the decision was made to move the minimum distance, or south 100 feet.

Melzer Exploration Company believes this location is not only optimal due to surface and subsurface considerations, it should also represent the least objectionable location from the stand point of offset operators. The #2 Bilberry location will not impact the offset operators on the north or the west since the

chosen location is 100' further south than a standard 1980' location. Seay Exploration, Inc., operator of the east half of Section 6 was directly involved in convincing Melzer Exploration Company to drill the #2 Bilberry and in fact asked for Melzer Exploration to accept operations on the west half of Section 6 when Seay could not undertake the venture themselves. Seay has stated that the proposed location is acceptable to them (see attached waiver). Melzer Exploration Company itself is the offset operator to the south.

Melzer Exploration Company as required by Rule 104 has prepared and circulated Letters of Waiver to the offset operators of the captioned tract. Enclosed is a list of the offset operators as well as the signed and approved Letter of Waiver from Melzer Exploration Company and Seay Exploration, Inc.. Upon receipt of the outstanding letters of waiver we will forward same for your files.

It is our hope that the information provided herein is complete and satisfactory for approval of our "unorthodox location" for the #2 Bilberry. Should you desire or require any additional information please advise and we will be happy to respond. Thank you for assistance in this matter.

Sincerely,

H. Scott Davis

LETTER OF WAIVER

Re: Melzer Exploration Company
#2 Bilberry
2080' FNL, 1980' FWL, Sec. 6,
T20S, R39E, Lea Co., N.M.

Dear Sir,

The undersigned is an offset operator to the captioned. By this letter the undersigned hereto waives all objection to Melzer Exploration Company drilling and completing the captioned well at the below described "unorthodox location":

Melzer Exploration Company #2 Bilberry to be drilled 2080' from the north line and 1980' from the west line of Section 6, Township 20 South, Range 39 East, Lea County, New Mexico.

GEOLOGICAL REVIEW
MELZER EXPLORATION COMPANY
#2 BILBERRY
HOUSE FIELD, LEA CO., NEW MEXICO

The House Yates/Seven Rivers gas field was discovered in 1982 as a result of drilling for deeper horizons. MGF Oil and Gas drilled the #1 J. Wright as a 7800' Drinkard test. When this zone proved to be non-commercial, the operator plugged back to the Yates/Seven Rivers formation and completed the well as gas producer. MGF subsequently added development wells to the new field by adding the J. Speight No.1 in the SE/4 of Section 31, T19S, R39E and the MGF-Sun #1 located in the SW/4 of Section 32, T19S, 39E.

The Yates/Seven Rivers formation in the House field is composed of thinly bedded sandy dolomites with interbedded anhydrites from 2900' to approximately 3200'. The better wells in the Field (those capable of ultimate production in excess .5 Bcf of gas) tend to be located on the crests of small structural features defined by 30 to 35 feet of structural relief. The Yates/Seven Rivers formation blankets the southeastern portion of Lea County but it is these small structural highs that appear to contain the long term commercial gas reserves ranging from 500 MMCFG to 800 MMCFG.

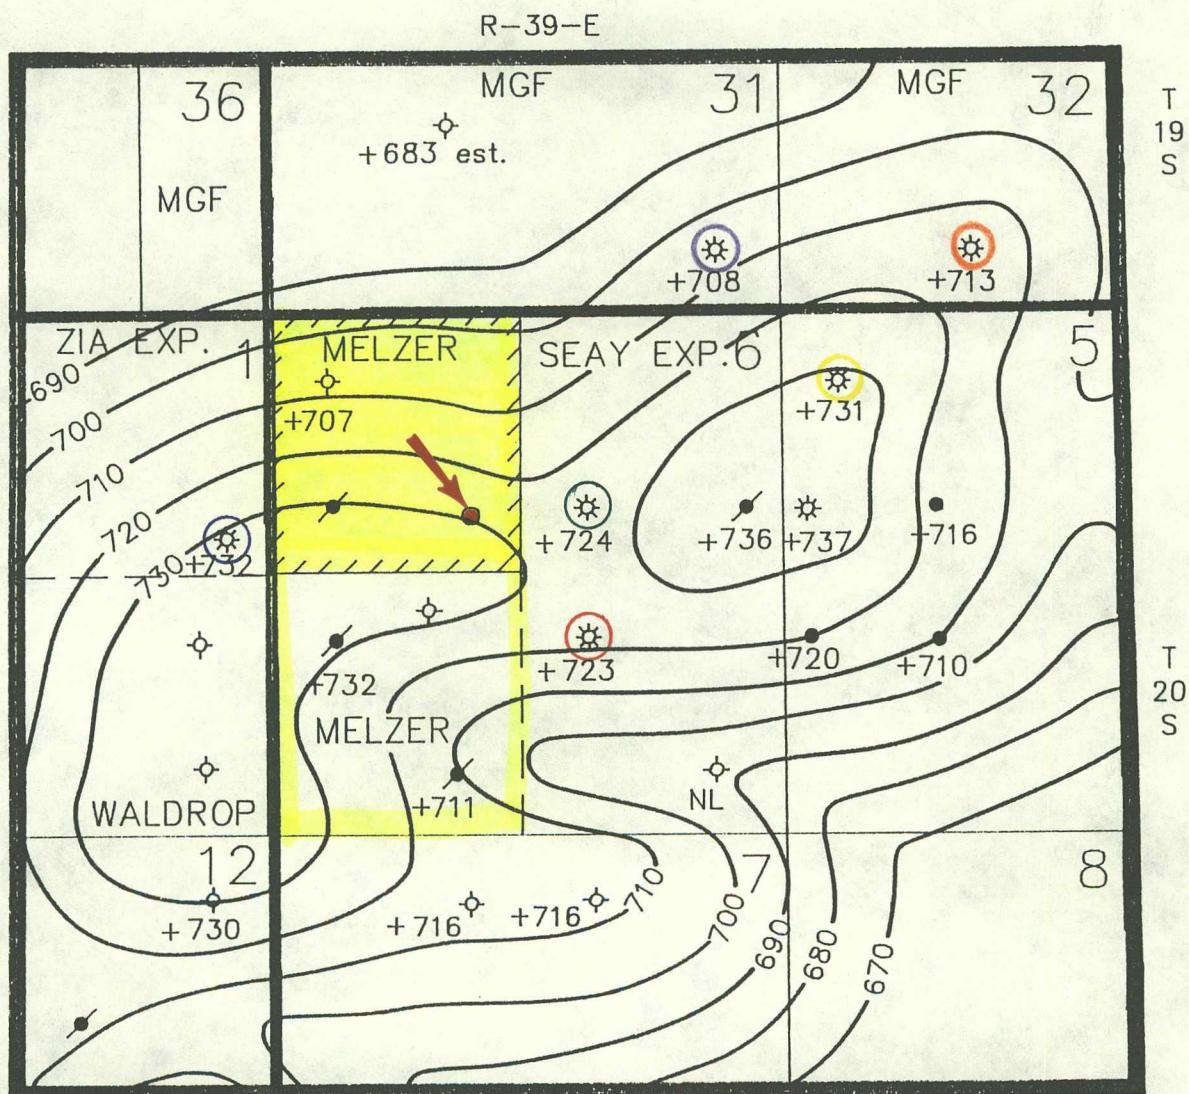

Sub-surface mapping of the House Field and Melzer Exploration Company's acreage in the W/2 of Section 6, T20S, R39E indicates that the possibility exists for gaining structure by moving in a southerly direction from the centerline of the west half of the section. As one moves closer to the south boundary of Section 6 one would expect to gain 10 to 15 feet of critical structure. This structural enhancement could improve the reserves attributable to the well by some 250,000 mcf.
