Santa Fe, New Mexico 87505

RE: 2007 Annual Report for the EPNG San Juan River Plant Project
NMOCD Reference Number: AP-69-0

Dear Mr. Von Gonten:

MWH Americas, Inc., on behalf of El Paso Natural Gas Company (EPNG) is submitting the enclosed 2007 Annual Report for the San Juan River Plant project. The report presents the 2007 monitoring data and includes recommendations for 2008 activities at this Site.

If you have any questions or comments concerning the enclosed report, please call either Nancy Prince of EPTPC (719-520-4690) or me (303-291-2276).

Sincerely,

Jed Smith
Project Manager

EXECUTIVE SUMMARY

The San Juan River Plant (SJRP) is located in San Juan County, near Kirtland, New Mexico. The SJRP processes natural gas collected from production wells located in the San Juan Basin of New Mexico and southern Utah. In June 1992, the SJRP was sold to Western Gas Resources, Inc. (WGR), which is now a wholly owned subsidiary of Anadarko Petroleum Corporation. Closure of evaporation ponds, pits, and other potential source areas within the SJRP occurred in 1992 through 1995. Based on past soil and soil gas investigations, the dissolved phase hydrocarbons are associated with relatively limited soil contamination. Groundwater monitoring has been performed at the SJRP since 1995.

Hydrocarbon impacts to groundwater have been observed primarily in the vicinity of monitoring wells MW-8 and MW-9. Samples from these two wells have consistently indicated that benzene is the only hydrocarbon constituent exceeding the New Mexico Oil Conservation Division (NMOCD) groundwater standards. El Paso Natural Gas (EPNG) has accordingly pursued active groundwater remediation, consisting of chemical oxygen enhancement and air sparging, to reduce the dissolved-phase benzene concentrations in this area.

Groundwater monitoring suggests that concentrations in monitoring well MW-8 have generally declined through the use of in-well oxygen-releasing compound socks, though the data show significant seasonal fluctuations. MW-8 benzene concentrations during 2007 ranged from <2.0 ug/L to 28.1 ug/L. The air sparging system at MW-9 was shut down in February 2004 and has remained off throughout 2007 in order to assess groundwater conditions. During this shut-down period, benzene concentrations in MW-9 have slowly increased. In 2007, concentrations of benzene ranged from 44.8 ug/L to 90.9 ug/L. The remediation efforts at monitoring wells MW-8 and MW-9 will continue, as needed, until quarterly sampling results indicate compliance with standards. The remedial efforts will then be suspended and closure monitoring will begin.

The NMOCD has requested annual monitoring of metals and inorganic parameters in all site monitoring wells as part of the current groundwater monitoring program. Elevated concentrations of some inorganic constituents, including total dissolved solids and sulfate, have historically been detected in various wells. It is possible that these elevated concentrations may be associated with past practices; however, past closure activities have addressed any site-related sources and this region is known to contain elevated total dissolved solids concentrations. There are no known affected downgradient users of the groundwater.

EPNG has initiated a Stage I Abatement Plan to investigate hydrocarbon impacts encountered in groundwater near the Praxair lined pond. The results of the initial investigation were discussed in the Stage I Interim Report, submitted to the NMOCD on March 28, 2006. This report included a work plan for additional investigation activities. In September 2006, EPNG made slight revisions to the work plan and re-submitted it. EPNG is currently awaiting work plan approval from the NMOCD.

1.0 INTRODUCTION

This annual report has been prepared on behalf of El Paso Natural Gas Company (EPNG) to present a summary of physical activities performed and analytical data collected at the San Juan River Plant (SJRP) during 2007. This site is located in San Juan County, Township 29N, Range 15W, Section 1, near Kirtland, New Mexico, as shown on **Figure 1.**

Current remedial action at the SJRP is limited to in-situ oxygen enhancement of groundwater through use of oxygen-releasing compound (ORC) in monitoring well MW-8. Dissolved phase groundwater impacts are monitored annually for the entire site and quarterly in the MW-8/MW-9 area.

Site Description. EPNG owned the SJRP until June 1992. Since that time, the facility has been owned and operated by Western Gas Resources, Inc. (WGR), which is now a wholly owned subsidiary of Anadarko Petroleum Corporation. The plant processes natural gas collected from production wells located in the San Juan Basin of New Mexico and southern Utah. The SJRP is a 630-acre facility that has contained gas processing facilities, two raw water ponds (now closed), three wastewater evaporation ponds (now closed), a sulfur recovery plant, water and hydrocarbon tanks, a pigging station, flare pits, and several 16- to 24-inch-diameter natural gas pipelines that cross the facility. In 2002-2003, the Praxair Nitrogen Plant was built in the area north of the SJRP, to the south of monitoring wells MW-8 and MW-9. **Figure 2** presents a detailed site map of the SJRP. Closure of the evaporation ponds, flare pits, and other potential contaminant source areas was completed during 1992 through 1995. Groundwater has been monitored at this site since 1995.

Report Organization. This report is organized into six sections and supporting appendices. **Section 2.0** provides a discussion of the SJRP project history. **Section 3.0** includes a summary of field activities conducted at the SJRP during 2007, and **Section 4.0** provides a discussion of results. Conclusions and recommendations are provided in **Section 5.0**, and references are listed in **Section 6.0**.

2.0 PROJECT HISTORY

The SJRP was previously owned by EPNG, but was sold to the current operator, WGR, on June 19, 1992. Investigation and remediation activities conducted at the SJRP have included the following components:

- Several investigations were conducted at the SJRP between 1985 and 1995. As a result, 24 monitoring wells have been installed at various locations at the plant.

- The north and south flare pits were closed in 1992 after removing 18,200 cubic yards (cy) and 3,520 cy of contaminated material from the north and south pits, respectively.

- The former wastewater evaporation ponds were closed during 1995 and early 1996. The pit and pond closure activities included capping the ponds with compacted, low-permeability soils.

- EPNG abandoned 17 monitoring wells, upgraded two wells, installed five new monitoring wells, and conducted a soil gas investigation during the summer of 1995. Results of the soil gas investigation indicated shallow hydrocarbon contamination near monitoring wells MW-8 and MW-9.

- EPNG submitted a groundwater remediation work plan to the New Mexico Oil Conservation Division (NMOCD) in January 2001 to address elevated benzene in monitoring wells MW-8 and MW-9, and received approval to begin remedial actions on June 4, 2001. The work plan included provisions to install an air sparging system with two air sparging wells; one injection point located within 10 feet of each monitoring well.

- The air sparging system air injection wells (SW-8 and SW-9) were installed on October 30, 2001. Both wells were developed on November 12, 2001.

- A pre-pilot air sparging test was conducted at both wells on November 13, 2001. Results from this test indicated good communication between SW-9 and MW-9 but poor communication between SW-8 and MW-8.

- Because of poor communication between SW-8 and MW-8, an ORC sock consisting of magnesium peroxide and manufactured by Regenesis, Inc., was recommended for remediation in this area. The ORC sock was installed in MW-8 on November 14, 2001.

- The air sparging pilot test was initiated on November 14, 2001. With the exception of a 48-hour shutdown prior to the four-week sampling event on December 26, 2001, the air sparging system operated continuously from November 14, 2001 to January 18, 2002. The air sparging pilot test culminated with a sampling event on January 25, 2002. An additional sampling event was performed on February 21, 2002, to evaluate the potential for contaminant concentration rebound following a four-week shutdown.

- From February 2002 through December 2002, site activities included continued operation and maintenance (O&M) of the air sparging system, which was placed into continuous operation following the pilot test, and site-wide annual groundwater monitoring.

- During 2003, site activities included periodic O&M of the air sparging system, replacement of ORC socks into MW-8, quarterly sampling of MW-8 and MW-9, and site-wide annual groundwater monitoring.

- Based on benzene, toluene, ethylbenzene and total xylenes (BTEX) concentrations below New Mexico Water Quality Control Commission (NMWQCC) standards, the air sparging system was shut-down in February 2004 to assess static groundwater conditions at the site.

- During 2004 through 2006, site activities included replacement of ORC socks into MW-8, quarterly sampling of MW-8 and MW-9, and site-wide annual groundwater monitoring.

- EPNG submitted a Stage I Abatement Plan to NMOCD in November 2005 to investigate hydrocarbon impacts encountered in groundwater near the Praxair evaporation pond at the SJRP. Approval was received on January 23, 2006 to begin investigative actions. Results of this investigation are detailed in the Stage I Interim Report, submitted March 28, 2006, which recommended that further investigation be conducted via hollow-stem auger, as the effectiveness of direct push technology at the site was found to be limited.

- The air sparge system has remained off since system shut down in 2004. Site activities for 2007 included quarterly sampling of MW-8 and MW-9, and site-wide annual groundwater monitoring.

- In May 2007, monitoring well MW-7, which was located immediately adjacent to the Praxair facility, was plugged and abandoned at Praxair's request, in order to facilitate new process construction.

3.0 SUMMARY OF 2007 ACTIVITIES

The current environmental program at the SJRP consists of dissolved-phase hydrocarbon remediation (chemical oxygen enhancement) and site-wide groundwater monitoring. In February 2004, the air sparging system was shut down in anticipation of groundwater sampling. The system has remained off since that time in order to monitor static groundwater conditions at the site and pending additional investigation in the area. The following section details site activities conducted at the SJRP during 2007.

3.1 GROUNDWATER MONITORING PROGRAM

The groundwater monitoring program included the following components during 2007:

- On August 23, 2007, the six site monitoring wells (W-2, MW-4 through MW-9) were sampled for BTEX compounds, NMWQCC trace metals, total dissolved solids (TDS), alkalinity, chloride, and sulfate.

- Remediation monitoring wells MW-8 and MW-9 were sampled quarterly in February, May, August, and December 2007 and analyzed for BTEX compounds to evaluate the effectiveness of hydrocarbon remediation activities.

- Site-wide groundwater elevation measurements were collected quarterly at each well.

All groundwater monitoring activities during 2007 were conducted by Lodestar, Inc. Laboratory analyses were performed by Accutest Laboratories in Houston, Texas.

3.2 HYDROCARBON REMEDIATION

Since 2002, dissolved phase hydrocarbon remediation activities at the SJRP have included oxygen enhancement using ORC socks in MW-8 and air sparging in the vicinity of MW-9. The following paragraphs describe 2007 remediation activities.

ORC Enhancement. The ORC socks in MW-8 were not replaced during 2007. Dissolved oxygen was measured during the February, May and August sampling events; dissolved oxygen concentrations were 9.02 mg/L, 11.4 mg/L, and 4.82 mg/L respectively, indicating that sufficient oxygen was still available for biodegradation. In addition, BTEX concentrations in MW-8 were below their respective NMWQCC standards in the third and fourth quarters of 2007. ORC socks will generally be replaced annually, or as-needed, based on quarterly monitoring of dissolved oxygen and BTEX concentrations in this well.

Air Sparging System. As described in Section 2.0, air sparging has not been conducted at the site since January 2004. Pending additional source material investigation in the vicinity of MW-8 and MW-9, the system will likely remain off.

4.0 DISCUSSION OF 2007 RESULTS

This section describes the results of activities conducted at the SJRP during 2007.

4.1 SITE-WIDE GROUNDWATER MONITORING RESULTS

Groundwater Elevation Monitoring. Groundwater elevation maps for each quarter are presented in **Figures 3** through **6**. In general, groundwater flows radially outward from the topographic rise on which the SJRP is located. In the north plant area, groundwater flows towards the northwest. Groundwater beneath the southern portion of the plant generally flows to the southwest. Field documentation for water level monitoring activities is presented in **Appendix A**.

BTEX Sampling Results. **Figures 9, 10,** and **11** depict long-term trends in the three wells with detectable concentrations (i.e., MW-5, MW-8, and MW-9). BTEX results from annual samples collected during August 2007 are presented in **Table 1** and on **Figure 5**. During the annual sampling event, BTEX concentrations in W-2 and MW-6, were below analytical detection limits. MW-4 and MW-5 had a benzene concentrations of 0.37 µg/L (estimated results below the reporting limit) and 3.7 µg/L respectively, both below the NMWQCC standard of 10 µg/L. These results are consistent with the results from 2002 through 2006. Results from MW-8 and MW-9 are discussed in the next section, along with the other quarterly sampling results. Documentation of 2007 field activities are included in **Appendix A**, and the analytical laboratory reports are included in **Appendix B**.

Inorganic Sampling Results. Results for inorganic samples collected during 2007 are presented in **Table 2.** Elevated concentrations of some inorganic constituents, including TDS and sulfate, were detected in various wells. This finding is consistent with previous annual sampling events. Isoconcentration maps presenting TDS and sulfate concentrations for samples collected during August 2007 are shown on **Figures 7** and **8**, respectively. It is possible that these elevated concentrations may be associated with past practices; however, past closure activities have addressed any site-related sources of these constituents, and this region is known to contain elevated inorganic concentrations. There are no downgradient users of the groundwater. Documentation of field activities and laboratory reports are presented in **Appendix A** and **Appendix B**, respectively.

4.2 QUARTERLY SAMPLING RESULTS

The quarterly groundwater sampling results are shown on **Table 1** and on **Figures 3** through **6**. During the 2007 quarterly sampling, MW-8 benzene concentrations were above NMWQCC standards at 28.1 µg/L and 19.6 µg/L in the first and second quarters, respectively, then fell below detection limits in the third and fourth quarters of 2007. Concentrations in this well show significant fluctuations historically.

Benzene concentrations in MW-9 have remained above standards (44.8 µg/L, 82 µg/L, 88.1 µg/L, and 90.9 µg/L), during each respective quarter. These results indicate that air sparging in the area was effective when operational and that continued remediation would

help to further reduce BTEX concentrations. However, it is unclear whether or not sparging would be able to remediate the area sufficiently to prevent rebounding concentrations in MW-9. Air sparging will be re-evaluated following the pending additional investigation activities.

5.0 CONCLUSIONS AND RECOMMENDATIONS

The following conclusions and recommendations are provided based on the information presented in this report.

5.1 SITE-WIDE GROUNDWATER MONITORING PROGRAM

Groundwater sampling performed as part of the site-wide groundwater monitoring at SJRP resulted in the following conclusions and recommendations:

- Groundwater flows radially away from the topographic rise on which SJRP is located. In the north plant area, groundwater flow is towards the northwest; in the south plant area, groundwater flow is primarily towards the southwest.

- The remaining groundwater impacts in excess of BTEX standards appear to be in the region of MW-8 and MW-9.

- Consistent with historic monitoring, inorganic constituents were measured above NMWQCC standards during the August 2007 sampling event. The elevated concentrations of TDS and sulfate may result from past site practices; however, it is likely that some elevated concentrations are naturally occurring in the region.

- EPNG recommends continuation of the annual site-wide groundwater monitoring program.

5.2 HYDROCARBON REMEDIATION PROGRAM

The following conclusions and recommendations are provided regarding the hydrocarbon remediation performed near wells MW-8 and MW-9:

- Benzene concentrations in MW-9 have remained above standards. However, the benzene concentrations in MW-8 were non-detect during the third and fourth quarters of 2007.

- EPNG recommends continuation of quarterly monitoring at MW-8 and MW-9 for BTEX concentrations and dissolved oxygen content.

- ORC socks will be replaced in MW-8, as needed, based on quarterly monitoring of dissolved oxygen and BTEX concentrations.

- In November 2005, EPNG submitted a Stage I Abatement Plan to NMOCD to investigate hydrocarbon impacts encountered in groundwater near the Praxair evaporation pond at the SJRP. Approval of this abatement plan was received from NMOCD on January 23, 2006, and the investigation was performed in February 2006. Results of the initial investigation were detailed in the Stage I Interim Report submitted by March 28, 2006. Revisions to the work plan for additional investigation

included in the Stage I Interim Report were submitted on September 28, 2006. The MW-9 area will be evaluated following the additional investigation activities.

SAMPLE DELIVERY GROUP CASE NARRATIVE

Client: Montgomery Watson **Job No** T16473

Site: San Juan River Plant (SJRP) **Report Date** 3/2/2007 3:58:16 PM

2 Samples were collected on 02/27/2007 and were received at Accutest on 02/28/2007 properly preserved, at 2 Deg. C and intact. These Samples received an Accutest job number of T16473. A listing of the Laboratory Sample ID, Client Sample ID and dates of collection are presented in the Results Summary Section of this report.

Except as noted below, all method specified calibrations and quality control performance criteria were met for this job. For more information, please refer to QC summary pages.

Volatiles by GC By Method SW846 8021B

Matrix AQ **Batch ID:** GKK1020

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) T16479-7MS, T16479-7MSD were used as the QC samples indicated.

Accutest Laboratories Gulf Coast (ALGC) certifies that this report meets the project requirements for analytical data produced for the samples as received at ALGC and as stated on the COC. ALGC certifies that the data meets the Data QualityObjectives for precision, accuracy and completeness as specified in the ALGC Quality Manual except as noted above. This report is to be used in its entirety. ALGC is not responsible for any assumptions of data quality if partial data packages are used

ACCUTEST Laboratories

SAMPLE DELIVERY GROUP CASE NARRATIVE

Client: Montgomery Watson **Job No** T17627

Site: San Juan River Plant (SJRP) **Report Date** 6/8/2007 1:47:05 PM

2 Samples were collected on 05/25/2007 and were received at Accutest on 05/30/2007 properly preserved, at 2.2 Deg. C and intact. These Samples received an Accutest job number of T17627. A listing of the Laboratory Sample ID, Client Sample ID and dates of collection are presented in the Results Summary Section of this report.

Except as noted below, all method specified calibrations and quality control performance criteria were met for this job. For more information, please refer to QC summary pages.

Volatiles by GC By Method SW846 8021B

Matrix AQ **Batch ID:** GKK1088

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) T17634-1MS, T17634-1MSD were used as the QC samples indicated.

Accutest Laboratories Gulf Coast (ALGC) certifies that this report meets the project requirements for analytical data produced for the samples as received at ALGC and as stated on the COC. ALGC certifies that the data meets the Data QualityObjectives for precision, accuracy and completeness as specified in the ALGC Quality Manual except as noted above. This report is to be used in its entirety. ALGC is not responsible for any assumptions of data quality if partial data packages are used

N indicates data review were not a project specific requirement
N/A indicates criteria are not applicable for the specified analytical method or sample
N/R indicates data not available for review

NOTES:

1) Laboratory replicate (LR) relative percent difference (RPD) outside acceptance criteria for lead (30.1% [20]) and zinc (105.6% [20]). Qualify data with a "J" flag indicating that the data are estimated.
2) Matrix spike (MS) and/or matrix spike duplicate (MSD) recoveries outside acceptance criteria for magnesium (92%/72%[75-125]), potassium (131%/123%[75-125]) and sodium (400%/220% [75-125]). Sample concentration greater than four time spike concentration for magnesium and sodium and therefore MS/MSD recoveries do no apply and data are not qualified. Qualify potassium data with a "J+" indicating that the datum is estimated, potentially biased high.

X indicates verification criteria were not met
N indicates data review were not a project specific requirement
N/A indicates criteria are not applicable for the specified analytical method or sample
N/R indicates data not available for review

NOTES:

1) Sample was not preserved, thus reducing the holding time from 14 days to seven. Sample analyzed thirteen days after sample collection or six days outside of holding time, introducing a possible low bias. Qualify associated positive sample results with "J-" flags, indicating the data are estimated and possibly biased low. Qualify associated non-detect sample results with "UJ" flags, indicating possible false negatives.

ACCUTEST Laboratories

SAMPLE DELIVERY GROUP CASE NARRATIVE

Client: Montgomery Watson **Job No** T18606

Site: EPFS San Juan Basin Groundwater Site **Report Date** 9/10/2007 4:48:06 PM

6 Samples were collected on 08/23/2007 and were received at Accutest on 08/24/2007 properly preserved, at 1.7 Deg. C and intact. These Samples received an Accutest job number of T18606. A listing of the Laboratory Sample ID, Client Sample ID and dates of collection are presented in the Results Summary Section of this report.

Except as noted below, all method specified calibrations and quality control performance criteria were met for this job. For more information, please refer to QC summary pages.

Volatiles by GC By Method SW846 8021B

Matrix AQ **Batch ID:** GKK1177

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) T18613-5MS, T18613-5MSD were used as the QC samples indicated.
- Matrix Spike Recovery(s) for Toluene are outside control limits. Outside control limits due to high level in sample relative to spike amount.

Matrix AQ **Batch ID:** GKK1178

- All samples were analyzed within the recommended method holding time.
- Sample(s) T18708-2MS, T18708-2MSD were used as the QC samples indicated.
- All method blanks for this batch meet method specific criteria.

Metals By Method SW846 6010B

Matrix AQ **Batch ID:** MP6507

- All samples were digested within the recommended method holding time.
- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) T18606-6DUP, T18606-6MS, T18606-6MSD, T18606-6SDL, T18606-6DUP were used as the QC samples for metals.
- Matrix Spike Recovery(s) for Potassium are outside control limits. Spike recovery indicates possible matrix interference.
- Matrix Spike Duplicate Recovery(s) for Potassium are outside control limits. Probable cause due to matrix interference.
- RPD(s) for Duplicate for Arsenic, Chromium, Cobalt, Copper, Lead, Nickel, Potassium, Zinc are outside control limits for sample MP6507-D1. RPD acceptable due to low duplicate and sample concentrations.
- RPD(s) for Serial Dilution for Aluminum, Potassium are outside control limits for sample MP6507-SD1. Percent difference acceptable due to low initial sample concentration (< 50 times IDL).
- MP6507-SD1 for Potassium: Serial dilution indicates possible matrix interference.

Metals By Method SW846 7470A

Matrix AQ **Batch ID:** MP6503

- All samples were digested within the recommended method holding time.
- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) T18606-5DUP, T18606-5MS, T18606-5MSD were used as the QC samples for metals.

Wet Chemistry By Method EPA 160.1

Matrix AQ	Batch ID: GN12322

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) T18606-1DUP were used as the QC samples for Solids, Total Dissolved.

Wet Chemistry By Method EPA 310.1

Matrix AQ	Batch ID: GN12319

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) T18606-1DUP, T18606-1MS were used as the QC samples for Alkalinity, Total as CaCO3.
- Matrix Spike Recovery(s) for Alkalinity, Total as CaCO3 are outside control limits. Probable cause due to matrix interference.

Wet Chemistry By Method EPA 325.3

Matrix AQ	Batch ID: GN12320

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) T18606-3DUP, T18606-3MS were used as the QC samples for Chloride.

Wet Chemistry By Method EPA 353.2

Matrix AQ	Batch ID: GN12314

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) T18539-1DUP, T18539-1MS were used as the QC samples for Nitrogen, Nitrate + Nitrite.

Wet Chemistry By Method EPA 375.3

Matrix AQ	Batch ID: GN12321

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) T18606-6DUP, T18606-6MS were used as the QC samples for Sulfate.
- Matrix Spike Recovery(s) for Sulfate are outside control limits. Spike amount low relative to the sample amount. Refer to lab control or spike blank for recovery information.

Matrix AQ	Batch ID: GN12364

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) T18606-5DUP, T18606-5MS were used as the QC samples for Sulfate.

Accutest Laboratories Gulf Coast (ALGC) certifies that this report meets the project requirements for analytical data produced for the samples as received at ALGC and as stated on the COC. ALGC certifies that the data meets the Data QualityObjectives for precision, accuracy and completeness as specified in the ALGC Quality Manual except as noted above. This report is to be used in its entirety. ALGC is not responsible for any assumptions of data quality if partial data packages are used

(a) List QC batch identification if different than Batch ID
A indicates verification criteria were met
A/L indicates verification criteria met based upon Laboratory's QC Summary Form
X indicates verification criteria were not met
N indicates data review were not a project specific requirement
N/A indicates criteria are not applicable for the specified analytical method or sample
N/R indicates data not available for review

NOTES:

1) Sample pH at time of analysis was greater than two, thus reducing the holding time from 14 days to seven. Sample analyzed nine days after sample collection or two days outside of holding time, introducing a possible low bias. Qualify associated positive sample results with "J-" flags, indicating the data are estimated and possibly biased low. Qualify associated non-detect sample results with "UJ" flags, indicating possible false negatives.
2) Trip blank contains toluene @ 1.7 µg/l. Analyte not detected in associated samples, no qualification.

ACCUTEST Laboratories

SAMPLE DELIVERY GROUP CASE NARRATIVE

Client: Montgomery Watson **Job No** T19919

Site: EPFS San Juan Basin Groundwater Site **Report Date** 12/10/2007 4:19:56 PM

3 Samples were collected on 11/28/2007 and were received at Accutest on 11/30/2007 properly preserved, at 2.3 Deg. C and intact. These Samples received an Accutest job number of T19919. A listing of the Laboratory Sample ID, Client Sample ID and dates of collection are presented in the Results Summary Section of this report.

Except as noted below, all method specified calibrations and quality control performance criteria were met for this job. For more information, please refer to QC summary pages.

Volatiles by GCMS By Method SW846 8260B

Matrix AQ **Batch ID:** VB1552

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) T19925-32MS, T19925-32MSD were used as the QC samples indicated.
- Matrix Spike Recovery(s) for m,p-Xylene are outside control limits. Outside control limits due to matrix interference.
- T19919-1: Sample was not preserved to a pH < 2; reported results are considered minimum values.

Matrix AQ **Batch ID:** VF2798

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.

Accutest Laboratories Gulf Coast (ALGC) certifies that this report meets the project requirements for analytical data produced for the samples as received at ALGC and as stated on the COC. ALGC certifies that the data meets the Data QualityObjectives for precision, accuracy and completeness as specified in the ALGC Quality Manual except as noted above. This report is to be used in its entirety. ALGC is not responsible for any assumptions of data quality if partial data packages are used
