*WATER @ 55' BGS @ 06/25/09*

Describe Cause of Problem and Remedial Action Taken.\*  
The area is historical, weathered hydrocarbon hardpan located at the Annie Christmas battery. JHHC is voluntarily performing this housekeeping action to build a berm around the facility tanks for environmental protection measures.

Describe Area Affected and Cleanup Action Taken.\*  
The impacted hardpan area will be excavated and restored with clean material purchased from the landowner. Impacted soils > 1000 ppm TPH will be transported to the John H. Hendrix Corp. landfarm. Ground water is 55-60' BGS at this location (USGS and NMOSE databases). Initial Chloride analysis (560 mg/kg) was performed at Cardinal Labs. Photos are attached.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
