Greetings Edward:

ROC has scheduled a Geoprobe to be at the site on November 11th and advance borings to further delineate the site and provide more data in estimating the chloride mass in the vadose zone. We will submit a work plan soon after gathering the new data.

Thanks - Gil

Dear Mr. Conder:

The New Mexico Oil Conservation Division (OCD) has received the Investigation and Characterization Report for the EME B-8 Release Site, dated October 19, 2009, and has conducted a review of the report. The report indicates that the Rice Operating Company (ROC) has not completed the delineation requirements in accordance with 19.15.29 NMAC (formerly, Rule 116). Therefore, the OCD cannot accept a request for closure for above-referenced site at this time. Due to the chloride concentrations in the vadose zone and its proximity to groundwater at this site, the OCD is requiring the following:

ROC must submit a plan to the OCD for approval within 60 days for chloride mass removal in groundwater based on vadose zone loading.

If you have any questions regarding this matter, please contact me at 505-476-3489.
