280 acres

Dear Sir:

The above captioned well is currently in the East Tanneyhill Cisco Pool. It is scheduled for reclassification to the South Peterson-Pennsylvanian Associated Pool at the August Nomenclature hearing.

Under the provisions of section II of Rule 104, Energy Reserves Group hereby requests administrative approval of a non standard gas unit for the above captioned well. The non standard unit consist of the East 1/2 of Sec. 8 less the 40 acres dedicated to the No. 1 well. The quarter-quarter sections are contiguous for the unit and are within a single half section. The offset operators are being notified with a copy of this request by certified mail. The well is 660' from the nearest unit boundry.

The following are C-115 Production exerppts:

Month	Barrels Oil	MCF Gas	GOR (Cu.Ft./BBL)
March	4,742	53,028	11,183
April	3,657	45,775	12,517
May	609	17,105	28,087

Production was curtailed for the month of May because of gas overproduction and the GOR dramatically increased. Current condensate gravity is 51.2° @ 60°F.

The attached map has the proposed non standard unit in orange outline. The immediately adjacent land ownership is updated from our March 1982 general land map.

R. L. Robertson
Production Engineer II
