RE: Application for Exception for Downhole Commingling
Bugler #3-House Field-API # 30-025-39648
Unit L, Section 13, T-20-S, R-38-E
House; Blinebry, South House; Tubb and House; Drinkard Pools
Lea County, New Mexico

Dear Mr. Kautz,

I am proposing to use offset production allocation data to determine the allocation percentages used when downhole commingling the Blinebry, Tubb, and Drinkard Oil & Gas pools. I have enclosed the administrative application form (C-103) and attachments used to determine the new allocation method proposed for the Bugler #3 completion. The ownership (WI, NRI, and ORRI) of these pools are identical in this well. The fluids from each of these zones are compatible as seen in other surrounding commingled wells in this area. Commingling these fluids together will not damage the wellbore nor have any impact on the value of the total remaining production. The wells in this area are operated by a production lift system which maximizes production by keeping the well pumped off. This system can easily handle cross flow without encountering any problems. Overall, commingling will improve the efficiency of our present and future recovery operations.

This allocation method was found by calculating the cumulative and average production data for each individual zone in a nine section area surrounding the Bugler #3. By analyzing the average oil, gas and water production for the Blinebry, Tubb and Drinkard pools, I was unable to calculate the percentage production allocation for each zone. Please refer to the attached spreadsheets for my calculations.

If you need additional information or have any questions, please give me a call at (918) 491-4968.

Sincerely,

Amber Cooke
