Describe Cause of Problem and Remedial Action Taken.* A small hole was found in the pipeline. The pipeline was uncovered to repair the hole. All contaminated material was placed on plastic to await disposal in a Division approved facility.		
Describe Area Affected and Cleanup Action Taken.* The affected area was approximately 100'x 30'. The area was excavated to a depth of approximately 5' BGS. Three soil samples were obtained and analyzed at Cardinal Lab in Hobbs. Lab results indicated no presence of TPH or BTEX and chloride levels were well below levels set forth by NMOCID. Results were presented to Geoff Leking at NMOCID for his review. He approved the closure of the site. The area was backfilled with clean material, contoured to match the surrounding terrain, and seeded with a custom blend of seed.		
I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCID rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCID marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCID acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
