Re: Plains All American – 2010 Annual Monitoring Reports
2 Sites in Lea County, New Mexico

RECEIVED OCD
2011 MAR 23 A 11:38

Dear Mr. Hansen:

Plains All American is an operator of crude oil pipelines and terminal facilities in the state of New Mexico. Plains All American actively monitors certain historical release sites exhibiting groundwater impacts, consistent with assessments and work plans developed in consultation with the New Mexico Oil Conservation Division (NMOCD). In accordance with the rules and regulations of the NMOCD, Plains All American hereby submits our Annual Monitoring reports for the following sites:

<u>Livingston Line-Bob McCasland</u>	1R-0395	<u>Section 3, T21S, R37E, Lea County</u>
<u>Livingston Ridge to Hugh-P. Sims</u>	1R-0398	<u>Section 3, T21S, R37E, Lea County</u>

Terracon prepared these documents and has vouched for their accuracy and completeness, and on behalf of Plains All American, I have personally reviewed the documents and interviewed Terracon personnel in order to verify the accuracy and completeness of these documents. It is based upon these inquiries and reviews that Plains All American submits the enclosed Annual Monitoring Reports for the above facilities.

If you have any questions or require further information, please contact me at (575) 441-1099.

Sincerely,

Jason Henry
Remediation Coordinator
Plains All American

CC: Geoff Leking, NMOCD, Hobbs, NM

Dear Mr. Henry:

Terracon is pleased to submit four copies of the 2010 Annual Groundwater Monitoring Report for the above referenced site.

We appreciate the opportunity to perform these services for Plains Pipeline, L.P. Please contact either of the undersigned at (432) 684-9600 if you have questions regarding the information provided in the report.

Sincerely,
Terracon

1.0 INTRODUCTION

1.1 Site Description

Site Name	Livingston Line – Bob McCasland
Site Location	Approximately 5 miles north-northeast of Eunice, Lea County, New Mexico on Loop 207.
General Site Description	Pipeline right-of-way surrounded by native pasture land, in close proximity of the abandoned Carbon Black Plant.

A topographic map is included as Figure 1 and a site plan is included as Figure 2 of Appendix A.

On July 13, 2001, a reported four barrels of crude oil were released from the Livingston four-inch steel pipeline. The release covered an area of approximately 1,600 square feet of pipeline right-of-way and caliche road.

Initial investigative activities were conducted from August 16, 2001 through August 22, 2001, and included advancing 17 soil borings. It was determined during this time that groundwater, situated approximately 30 feet below ground surface (bgs), had been impacted. Three groundwater monitor wells (MW-1, MW-2 and MW-3) were installed around the release area to evaluate the extent and magnitude of the release. Samples collected from the groundwater monitor wells indicated groundwater concentrations for benzene, toluene, ethylbenzene, and total xylenes (BTEX) were above New Mexico Water Quality Control Commission (NMWQCC) Groundwater Standards. Three additional groundwater monitor wells (MW-4, MW-5 and MW-6) were installed at the site. Phase separated hydrocarbon (PSH) was detected in groundwater monitor well MW-4 following its installation.

In December 2001, approximately 11,445 cubic yards of hydrocarbon impacted soil were excavated and stockpiled on-site. Earthen berms were constructed around the stockpiles to prevent runoff. Analytical results for soil samples collected from the excavation indicated BTEX concentrations above New Mexico Oil Conservation Division (NMOC) remedial threshold limits.

To delineate the lateral extent of groundwater impact at the site, three additional groundwater monitor wells (MW-7, MW-8 and MW-9) were installed in June 2004. Two additional monitor wells (MW-10 and MW-11) were installed in November of 2004. During installation of these five groundwater monitor wells in June and December 2004, soil samples were collected and submitted to AnalySys, Inc., an analytical laboratory in Austin, Texas for analysis of total petroleum hydrocarbons (TPH) (gasoline and diesel range organics) and BTEX constituents. BTEX constituents for each of soil samples from the monitor wells were below NMOCD remedial threshold limits. TPH concentrations from soil samples collected from groundwater monitor wells MW-7, MW-10 and MW-11 were at or below laboratory analytical method detection limits (MDLs).

1.2 Scope of Work

Terracon's scope of work included assuming oversight of remedial activities on February 1, 2007. Oversight activities included the preparation of 2006, 2007 and 2008 annual groundwater monitoring and soil closure status reports for submittal to the NMOCD. Four quarterly groundwater monitoring and sampling events were conducted during 2010 by Terracon. The events were performed on February 3, 2010, May 27, 2010, August 16, 2010, and November 10, 2010 at the Livingston Line - Bob McCasland site located in Lea County, New Mexico.

The objective of the quarterly sampling events was to gauge the eleven groundwater monitor wells (MW-1 through MW-11) and to collect samples of groundwater from each well for analysis of BTEX (quarterly) and polycyclic aromatic hydrocarbons (PAHs), (annually). Groundwater samples for PAH analysis were collected from monitoring well MW-5 only, on November 10, 2010.

1.3 Standard of Care

Terracon was awarded this project on February 1, 2007. A previous consultant hired by Plains performed site activities prior to Terracon assuming over site on this project. Terracon makes no assumptions or warranties regarding services being performed in a manner consistent with generally accepted practices of the profession undertaken in similar studies in the same geographical area during the same time period. Terracon makes no warranties, either express or implied, regarding the findings, conclusions or recommendations. Please note that Terracon does not warrant the work of laboratories, regulatory agencies or other third parties supplying information used in the preparation of the report.

1.4 Additional Scope Limitations

Findings, conclusions and recommendations resulting from these services are based upon information derived from the on-site activities and other services performed under this scope of

work; such information is subject to change over time. Certain indicators of the presence of hazardous substances, petroleum products, or other constituents may have been latent, inaccessible, unobservable, non-detectable or not present during these services, and we cannot represent that the site contains no hazardous substances, toxic materials, petroleum products, or other latent conditions beyond those identified during this remediation activities. Subsurface conditions may vary from those encountered at specific borings or wells or during other surveys, tests, assessments, investigations or exploratory services; the data, interpretations, findings, and our recommendations are based solely upon data obtained at the time and within the scope of these services.

1.5 Reliance

This report has been prepared for the exclusive use of Plains Pipeline, L. P., and any authorization for use or reliance by any other party (except a governmental entity having jurisdiction over the site) is prohibited without the express written authorization of Plains Pipeline, L.P. and Terracon. Any unauthorized distribution or reuse is at the client's sole risk. Notwithstanding the foregoing, reliance by authorized parties will be subject to the terms, conditions and limitations stated in this report, and Terracon's Terms and Conditions. The limitation of liability defined in the terms and conditions is the aggregate limit of Terracon's liability to the client and all relying parties unless otherwise agreed in writing.

2.0 FIELD ACTIVITIES

2.1 Groundwater Monitoring and Sampling

Quarterly monitoring and sampling events were performed on February 3, 2010, May 27, 2010, August 16, 2010, and November 10, 2010, by Terracon. Figure 1 presents the general boundaries and topography of the site on portions of the USGS topographic quadrangle map of Hobbs Southwest, New Mexico (Appendix A). Figure 2 is a site plan that indicates the approximate locations of the monitor wells in relation to the pertinent structures and general site boundaries (Appendix A).

During each sampling event, monitor wells were gauged to determine the depth to groundwater and to check for the presence of crude oil or PSH. Based on the gauging data, PSH was present at a thicknesses ranging from non-detect to 0.06 feet in monitor well MW-4 during 2010. Previously, PSH was present as a sheen in monitor well MW-4. No additional monitor wells at the site contained measurable PSH during 2010. Groundwater monitor well MW-1 was dry in November 2007 and has remained dry throughout 2010. As such, a water sample was not obtained from this well during 2010. Groundwater gradient maps for each quarter are included as Figures 3 through 6 (Appendix A). Gauging data is included in Appendix B as Table 1.

A groundwater sample was collected and analyzed from ten of the eleven groundwater monitor

Plains Pipeline, L.P.
Livingston Line – Bob McCasland
Terracon Project Number A4077007
February 8, 2011

wells in accordance with the NMOCD. Prior to sample collection, each of these monitor wells was micro-purged until consistent values (i.e., less than 10% variance between consecutive readings) were obtained for pH, temperature and conductivity. Following purging, a groundwater sample was collected directly from polyethylene tubing attached to the downhole pump.

Groundwater samples were placed in laboratory-supplied containers appropriate to the analyses requested and placed on ice in a cooler. The sample coolers and completed chain-of-custody forms were delivered to Xenco Laboratories Company, in Odessa, Texas for standard turnaround for analysis of BTEX using EPA SW-846 Method 8021B in each of the four quarters, and TPH using EPA SW-846 Method 8015M and PAHs using EPA SW-846 Method 8270C in February 2010.

3.0 DATA EVALUATION

3.1 Water Level Data

Water level measurement data collected during the respective quarterly sampling events were used to construct groundwater gradient maps that are included as Figures 3, 4, 5, and 6 (Appendix A). Groundwater elevation contours generated from the quarterly sampling events of 2010 indicated the groundwater gradient was generally consistent with previous sampling events. Previous gauging data at the site indicated that the groundwater gradient had been predominately to the south-southeast. Groundwater gradients during 2010 sampling and gauging events are summarized below:

- The gradient/direction during the February 2010 sampling event was 0.005 ft/ft and toward the southeast;
- The gradient/direction during the May 2010 sampling event was 0.003 ft/ft and toward the southeast;
- The gradient/direction during the August 2010 sampling event was 0.005 ft/ft and toward the southeast; and
- The gradient/direction during the November 2010 sampling event was 0.003 ft/ft and toward the southeast.

Groundwater flow direction was relatively consistent during 2010. Water level measurement data is summarized in Table 1 in Appendix B.

Monitor well MW-1 has been dry, containing no fluids, since November 2007. During 2010, groundwater elevations increased by an average 0.48 feet in site monitor wells.

Livingston Line – Bob McCasland
Terracon Project Number A4077007
February 8, 2011

3.2 Groundwater Analysis Data

Laboratory results from the analysis of groundwater samples collected from monitor wells MW-1 through MW-11 are summarized in Table 2 and Table 3 in Appendix B and presented on Figure 7 through Figure 10 in Appendix A. The executed chain-of-custody forms and laboratory data sheets are provided in Appendix C.

1st Quarter 2010

Groundwater samples were collected and analyzed for BTEX constituents during the first quarter on February 3, 2010. The first quarter results are summarized below:

- Groundwater was not collected from monitor well MW-1 in February 2010, as the well was dry and contained no fluids;
- BTEX constituents were not detected in the groundwater samples collected from monitor wells MW-3, MW-6, MW-7, MW-8, MW-9, MW-10 and MW-11 at concentrations which exceeded their respective laboratory reporting limit and/or NMWQCC groundwater standards;
- The groundwater samples collected from monitor wells MW-2 (at 0.0287 mg/l), MW-4 (at 2.019 mg/l), and MW-5 (at 0.0432 mg/l), contained concentrations of benzene which exceeded the NMWQCC groundwater standard of 0.01 mg/l;
- Toluene, ethylbenzene and total xylenes were not detected in any of the groundwater samples collected at the site above their respective laboratory reporting limits and/or NMWQCC groundwater standards; and,
- Measurable PSH was not detected in any of the monitor wells during the first quarter of 2010.

2nd Quarter

Groundwater samples were collected and analyzed for BTEX and PAH constituents during the second quarter on May 27, 2010. The second quarter results are summarized below:

- A groundwater sample was not collected from monitor well MW-1, as it was dry;
- A groundwater sample was not collected from monitor well MW-4 because of a presence of PSH;

- Benzene was not detected at concentrations exceeding the respective laboratory reporting limit and/or NMWQCC groundwater standard in the groundwater samples collected from monitor wells MW-3, MW-6, MW-7, MW-10 and MW-11;
- Benzene was detected in the groundwater samples collected monitor wells MW-2 (at 0.0262 mg/l), MW-5 (at 0.0824 mg/l), MW-8 (at 0.0268 mg/l), and MW-9 (at 0.0279 mg/l); exceeding the NMWQCC groundwater standard of 0.01 mg/l for benzene;
- Toluene, ethylbenzene and total xylenes were not detected in any of the groundwater samples collected at the site above their respective laboratory reporting limits and/or NMWQCC groundwater standards; and,
- Measurable PSH was detected in the monitor well MW-4 during the second quarter of 2010 at a thickness of 0.05 feet.

3rd Quarter

Groundwater samples were collected and analyzed for BTEX constituents during the third quarter on August 16, 2010. The third quarter results are summarized below:

- A groundwater sample was not collected from monitor well MW-1, as it was dry;
- A groundwater sample was not collected from monitor well MW-4 because of a presence of PSH;
- Benzene was not detected at concentrations exceeding the respective laboratory reporting limit and/or NMWQCC groundwater standard in the groundwater samples collected from monitor wells MW-2, MW-3, MW-6, MW-7, MW-10 and MW-11;
- Benzene was detected in the groundwater samples collected from monitor wells MW-5 (at 0.2479 mg/l), MW-8 (at 0.0478 mg/l), and MW-9 (at 0.0373 mg/l), which exceeded the NMWQCC groundwater standard of 0.01 mg/l for benzene;
- Toluene, ethylbenzene and total xylenes were not detected in the groundwater samples collected from the site monitor wells at concentrations above laboratory reporting limits and/or their respective NMWQCC groundwater standards; and,
- Measureable PSH was detected in the monitor well MW-4 during the third quarter of 2010 at a thickness of 0.3 inches.

4th Quarter

Groundwater samples were collected and analyzed for BTEX constituents during the fourth quarter on November 10, 2010. The fourth quarter results are summarized below:

- A groundwater sample was not collected from monitor well MW-1, as it contained no fluids during the fourth quarter sampling event;
- A groundwater sample was not collected from monitor well MW-4 because of a presence of PSH;
- The groundwater samples collected from monitor wells MW-3, MW-6, MW-7, MW-8, MW-10, and MW-11 did not contain benzene at concentrations exceeding the laboratory reporting limit and/or NMWQCC groundwater standard;
- Benzene was detected in the groundwater samples collected from monitor wells MW-2 (at 0.01 mg/l), MW-5 (at 0.0133 mg/l), and MW-9 (at 0.0345 mg/l), exceeding the NMWQCC groundwater standard of 0.01 mg/l for benzene;
- Toluene, ethylbenzene and total xylenes were not detected in any of the groundwater samples collected from the monitor wells at concentrations above their respective laboratory reporting limits and/or NMWQCC groundwater standards;
- PAH constituent were not detected in the groundwater sample collected from monitoring well MW-5 at concentrations exceeding their respective laboratory reporting limits and/or the NMWQCC groundwater standards. Groundwater from monitoring well MW-5 was the only sample to be analyzed for PAH constituents; and,
- Measurable PSH was only detected in monitoring well MW-4 at a thickness of 0.06 inches.

3.3 Historical Data Comparisons

Monitor wells MW-1, MW-3, MW-7 and MW-11 have historically not contained BTEX or TPH at concentrations exceeding their respective laboratory reporting limits and/or NMWQCC groundwater standards. Monitor well MW-1 has been dry since December 2007. Monitor well MW-1 was reportedly drilled to 40 feet bgs and it measures dry at approximately 32 feet bgs likely due to silting of sediments through the well screen. Minor thicknesses or a sheen of PSH

have been detected in monitor well MW-4 since it was installed in January 2002. PSH has been detected periodically in monitor well MW-8; however, PSH has not been detected in monitor well MW-8 during 2010. With a few exceptions, groundwater samples from monitor wells MW-2, MW-4, MW-5, MW-8, and MW-9 have historically contained benzene at concentrations exceeding the NMWQCC groundwater standards. Monitoring wells MW-6 and MW-10 have not contained benzene at concentrations exceeding the laboratory reporting limit and/or the NMWQCC groundwater standards since 2008.

With the exception of periodic concentrations of naphthalene detected in monitor wells MW-4 and MW-5, TPH and PAHs have not been detected at concentrations exceeding the laboratory reporting limits and/or NMWQCC groundwater standards since the monitor wells were installed. During 2010, none of the groundwater samples contained PAH constituents at concentrations exceeding their respective laboratory reporting limits and/or NMWQCC groundwater standards. Terracon has been purging large volumes of groundwater from monitor wells MW-2, MW-4, MW-5, MW-8 and MW-9 during 2010 in an attempt to enhance remediation of the plume at the site.

4.0 FINDINGS AND RECOMMENDATIONS

4.1 Findings

The annual groundwater report presents the results of four groundwater monitoring and sampling events for the 2010 calendar year.

- Monitor well MW-1 contained no fluids during the 2010 sampling events;
- Measurable PSH has not been detected in the monitor wells at the site, with the exception of monitor well MW-4. PSH was measured at thicknesses ranging from a sheen to 0.06 feet in 2010;
- With a few exceptions, groundwater samples collected from monitor wells MW-1, MW-3, MW-7, MW-10, and MW-11 have not contained BTEX constituents above their respective laboratory reporting limits and/or NMWQCC groundwater standards since the monitor wells were installed in 2001 (MW-1 and MW-3) and 2004 (MW-7, MW-10 and MW-11);
- Groundwater samples collected from monitor wells MW-2, MW-4, MW-5, MW-8 and MW-9 contained benzene at concentrations exceeding the NMWQCC groundwater standard during at least two of the four quarters they were sampled in 2010;
- The groundwater samples collected from monitor well MW-6 and MW-10 did not contain

benzene at concentrations exceeding the respective laboratory reporting limit and/or NNMQCC groundwater standard during any of the four quarters of 2010;

- Groundwater samples collected in 2010 did not contain toluene, ethylbenzene and total xylenes at concentrations above their respective laboratory reporting limits and/or the NMWQCC groundwater standards;
- PAH constituents were not detected in the groundwater sample collected from monitoring well MW-5 in November 2010 at concentrations exceeding their respective laboratory reporting limits and/or the NMWQCC groundwater standards;
- The extent of the PSH plume and the dissolved phase plume exceeding the NMWQCC groundwater standards have been defined. Detected concentrations of BTEX and PAHs have demonstrated a decreasing trend since groundwater sampling activities were initiated;
- The NMOCD recommended that a monitor well be installed down-gradient from the release site; however, landowner constraints have delayed any additional activities at the site, with the exception of sampling and gauging the existing monitor wells. However, it should be noted that monitor well MW-11 is slightly down-gradient and monitor well MW-6 is cross-gradient and that both exhibited benzene concentrations below the NMWQCC groundwater standards during 2010; and,
- A Soil Characterization Report and Remediation Plan report dated June 2006, by Environmental Plus, Inc. (EPI) was submitted to the NMOCD. This report detailed remediation activities conducted at the site, in-place soil concentrations, and recommendations for in-situ hydrocarbon-impacted soil closure.

4.2 Recommendations

Based upon the results of this report, EPI's report and correspondence from the NMOCD, Terracon recommends the following:

- Excavate the south-southwest sidewall of the excavation pit and level the excavation floor;
- Collect confirmation soil samples from the sidewalls and floor of the excavated area and analyze for BTEX and TPH;
- Install a 20-mil thick polyethylene liner from the location of former soil boring SB-15

(located approximately 120 feet from the southern most edge of the excavation) to the northern most edge of the excavation along the excavation floor. Cushion the liner with six inches of sand above and below the liner;

- Sample stockpiled material excavated from the release area for BTEX and TPH. If the stockpiled material are less than 1,000 mg/kg TPH and non-detect for BTEX, use the stockpile material to backfill the excavation;
- If the stockpiled materials are impacted above the site-specific risk-based remedial guidelines, blend and mix the stockpiled soils with native soils and/or caliche at the site to concentrations below the site-specific risk-based levels and backfill the excavation to surface grade then grade the release site area to allow natural drainage;
- After grading operations, seed the area with a grass blend approved by the landowner;
- Continue PSH recovery efforts on monitor wells (as necessary) on a bi-weekly schedule;
- Continue quarterly groundwater sampling for BTEX on all monitor wells for the calendar year of 2011 in accordance with the NMOCD approved sample reduction plan;
- Submit an annual report to the NMOCD detailing the 2011 site activities.

Table 2
CONCENTRATIONS OF BTEX AND TPH IN GROUNDWATER

Livingston Line - Bob McCasland Pipeline Leak
Lea County, New Mexico
NMOCD File Number: 1R-0395
Plains Pipeline, L. P. SRS Number 2001-11226
Terracon Project Number A4077007

All concentrations are reported in mg/L

Monitor Well Identification	Date	Benzene	Toluene	Ethylbenzene	m,p-Xylenes	<i>o</i> -Xylene	Gasoline TPH C ₆ -C ₁₂	Diesel TPH >C ₁₂ -C ₂₈	Oil TPH >C ₂₈ -C ₃₅	Total TPH C ₆ -C ₃₅

Table 2
CONCENTRATIONS OF BTEX AND TPH IN GROUNDWATER

Livingston Line - Bob McCasland Pipeline Leak
Lea County, New Mexico
NMOCD File Number: 1R-0395
Plains Pipeline, L. P. SRS Number 2001-11226
Terracon Project Number A4077007

All concentrations are reported in mg/L

Project Address:

Shawn Harris:

We are reporting to you the results of the analyses performed on the samples received under the project name referenced above and identified with the XENCO Report Number 361470. All results being reported under this Report Number apply to the samples analyzed and properly identified with a Laboratory ID number. Subcontracted analyses are identified in this report with either the NELAC certification number of the subcontract lab in the analyst ID field, or the complete subcontracted report attached to this report.

Unless otherwise noted in a Case Narrative, all data reported in this Analytical Report are in compliance with NELAC standards. Estimation of data uncertainty for this report is found in the quality control section of this report unless otherwise noted. Should insufficient sample be provided to the laboratory to meet the method and NELAC Matrix Duplicate and Matrix Spike requirements, then the data will be analyzed, evaluated and reported using all other available quality control measures.

The validity and integrity of this report will remain intact as long as it is accompanied by this letter and reproduced in full, unless written approval is granted by XENCO Laboratories. This report will be filed for at least 5 years in our archives after which time it will be destroyed without further notice, unless otherwise arranged with you. The samples received, and described as recorded in Report No. 361470 will be filed for 60 days, and after that time they will be properly disposed without further notice, unless otherwise arranged with you. We reserve the right to return to you any unused samples, extracts or solutions related to them if we consider so necessary (e.g., samples identified as hazardous waste, sample sizes exceeding analytical standard practices, controlled substances under regulated protocols, etc).

We thank you for selecting XENCO Laboratories to serve your analytical needs. If you have any questions concerning this report, please feel free to contact us at any time.

Respectfully,

Brent Barron, II

CASE NARRATIVE

Client Name: PLAINS ALL AMERICAN EH&S
Project Name: Livingston Line

Project ID: 2001-11226
Work Order Number: 361470

Report Date: 15-FEB-10
Date Received: 02/08/2010

Sample receipt non conformances and Comments:

None

Sample receipt Non Conformances and Comments per Sample:

None

Analytical Non Conformances and Comments:

Batch: LBA-793606 BTEX by EPA 8021
SW8021BM

Batch 793606, 1,4-Difluorobenzene recovered below QC limits . Matrix interferences is suspected; data not confirmed by re-analysis
Samples affected are: 361470-007.

Batch: LBA-793807 BTEX by EPA 8021
SW8021BM

Batch 793807, 1,4-Difluorobenzene recovered below QC limits. Sample data confirmed by re-analysis Qc data not confirmed for surrogate failures. Samples affected are: 550347-1-BLK,361470-009,361470-001.

- X** In our quality control review of the data a QC deficiency was observed and flagged as noted. MS/MSD recoveries were found to be outside of the laboratory control limits due to possible matrix /chemical interference, or a concentration of target analyte high enough to effect the recovery of the spike concentration. This condition could also effect the relative percent difference in the MS/MSD.
- B** A target analyte or common laboratory contaminant was identified in the method blank. Its presence indicates possible field or laboratory contamination.
- D** The sample(s) were diluted due to targets detected over the highest point of the calibration curve, or due to matrix interference. Dilution factors are included in the final results. The result is from a diluted sample.
- E** The data exceeds the upper calibration limit; therefore, the concentration is reported as estimated.
- F** RPD exceeded lab control limits.
- J** The target analyte was positively identified below the MQL and above the SQL.
- U** Analyte was not detected.
- L** The LCS data for this analytical batch was reported below the laboratory control limits for this analyte. The department supervisor and QA Director reviewed data. The samples were either reanalyzed or flagged as estimated concentrations.
- H** The LCS data for this analytical batch was reported above the laboratory control limits. Supporting QC Data were reviewed by the Department Supervisor and QA Director. Data were determined to be valid for reporting.
- K** Sample analyzed outside of recommended hold time.
- JN** A combination of the "N" and the "J" qualifier. The analysis indicates that the analyte is "tentatively identified" and the associated numerical value may not be consistent with the amount actually present in the environmental sample.
- BRL** Below Reporting Limit.
- RL** Reporting Limit

Project Address:

Jason Henry:

We are reporting to you the results of the analyses performed on the samples received under the project name referenced above and identified with the XENCO Report Number 374792. All results being reported under this Report Number apply to the samples analyzed and properly identified with a Laboratory ID number. Subcontracted analyses are identified in this report with either the NELAC certification number of the subcontract lab in the analyst ID field, or the complete subcontracted report attached to this report.

Unless otherwise noted in a Case Narrative, all data reported in this Analytical Report are in compliance with NELAC standards. Estimation of data uncertainty for this report is found in the quality control section of this report unless otherwise noted. Should insufficient sample be provided to the laboratory to meet the method and NELAC Matrix Duplicate and Matrix Spike requirements, then the data will be analyzed, evaluated and reported using all other available quality control measures.

The validity and integrity of this report will remain intact as long as it is accompanied by this letter and reproduced in full, unless written approval is granted by XENCO Laboratories. This report will be filed for at least 5 years in our archives after which time it will be destroyed without further notice, unless otherwise arranged with you. The samples received, and described as recorded in Report No. 374792 will be filed for 60 days, and after that time they will be properly disposed without further notice, unless otherwise arranged with you. We reserve the right to return to you any unused samples, extracts or solutions related to them if we consider so necessary (e.g., samples identified as hazardous waste, sample sizes exceeding analytical standard practices, controlled substances under regulated protocols, etc).

We thank you for selecting XENCO Laboratories to serve your analytical needs. If you have any questions concerning this report, please feel free to contact us at any time.

Respectfully,

Brent Barron, II

CASE NARRATIVE

Client Name: PLAINS ALL AMERICAN EH&S
Project Name: Livingston Line

Project ID: 2001-11043
Work Order Number: 374792

Report Date: 10-JUN-10
Date Received: 05/28/2010

Sample receipt non conformances and Comments:

None

Sample receipt Non Conformances and Comments per Sample:

None

Analytical Non Conformances and Comments:

Batch: LBA-809667 BTEX by EPA 8021
SW8021BM

Batch 809667, 1,4-Difluorobenzene recovered below QC limits . Matrix interferences is suspected; data not confirmed by re-analysis
Samples affected are: 374792-001.

Batch: LBA-809848 BTEX by EPA 8021
SW8021BM

Batch 809848, 1,4-Difluorobenzene recovered below QC limits . Matrix interferences is suspected; data not confirmed by re-analysis
Samples affected are: 374792-008.

Batch: LBA-809918 BTEX by EPA 8021

Samples for workorder (374792-001 through -004) were initially reported with small hits of Toluene. The Method Blank for the initial report was non-detect, therefore it was reported. Upon confirmation analysis requested by the client, the Toluene was not detected in the samples. The contamination in the initial analysis is most likely due to a sporadic bottle contamination. Non-conformance OD060910VOA001 has been generated, with the resultant corrective action being all positive results for Toluene that are at the reporting limit will be reanalyzed until such a time when it is determined that there is no Toluene contamination present in the bottles.

Odessa Laboratory Manager

Flagging Criteria

- X In our quality control review of the data a QC deficiency was observed and flagged as noted. MS/MSD recoveries were found to be outside of the laboratory control limits due to possible matrix /chemical interference, or a concentration of target analyte high enough to effect the recovery of the spike concentration. This condition could also effect the relative percent difference in the MS/MSD.
- B A target analyte or common laboratory contaminant was identified in the method blank. Its presence indicates possible field or laboratory contamination.
- D The sample(s) were diluted due to targets detected over the highest point of the calibration curve, or due to matrix interference. Dilution factors are included in the final results. The result is from a diluted sample.
- E The data exceeds the upper calibration limit; therefore, the concentration is reported as estimated.
- F RPD exceeded lab control limits.
- J The target analyte was positively identified below the MQL and above the SQL.
- U Analyte was not detected.
- L The LCS data for this analytical batch was reported below the laboratory control limits for this analyte. The department supervisor and QA Director reviewed data. The samples were either reanalyzed or flagged as estimated concentrations.
- H The LCS data for this analytical batch was reported above the laboratory control limits. Supporting QC Data were reviewed by the Department Supervisor and QA Director. Data were determined to be valid for reporting.
- K Sample analyzed outside of recommended hold time.
- JN A combination of the "N" and the "J" qualifier. The analysis indicates that the analyte is "tentatively identified" and the associated numerical value may not be consistent with the amount actually present in the environmental sample.

BRL Below Reporting Limit.

Project Address:

Jason Henry:

We are reporting to you the results of the analyses performed on the samples received under the project name referenced above and identified with the XENCO Report Number 386035. All results being reported under this Report Number apply to the samples analyzed and properly identified with a Laboratory ID number. Subcontracted analyses are identified in this report with either the NELAC certification number of the subcontract lab in the analyst ID field, or the complete subcontracted report attached to this report.

Unless otherwise noted in a Case Narrative, all data reported in this Analytical Report are in compliance with NELAC standards. Estimation of data uncertainty for this report is found in the quality control section of this report unless otherwise noted. Should insufficient sample be provided to the laboratory to meet the method and NELAC Matrix Duplicate and Matrix Spike requirements, then the data will be analyzed, evaluated and reported using all other available quality control measures.

The validity and integrity of this report will remain intact as long as it is accompanied by this letter and reproduced in full, unless written approval is granted by XENCO Laboratories. This report will be filed for at least 5 years in our archives after which time it will be destroyed without further notice, unless otherwise arranged with you. The samples received, and described as recorded in Report No. 386035 will be filed for 60 days, and after that time they will be properly disposed without further notice, unless otherwise arranged with you. We reserve the right to return to you any unused samples, extracts or solutions related to them if we consider so necessary (e.g., samples identified as hazardous waste, sample sizes exceeding analytical standard practices, controlled substances under regulated protocols, etc).

We thank you for selecting XENCO Laboratories to serve your analytical needs. If you have any questions concerning this report, please feel free to contact us at any time.

Respectfully,

Brent Barron, II

Odessa Laboratory Manager

Flagging Criteria

- X In our quality control review of the data a QC deficiency was observed and flagged as noted. MS/MSD recoveries were found to be outside of the laboratory control limits due to possible matrix /chemical interference, or a concentration of target analyte high enough to effect the recovery of the spike concentration. This condition could also effect the relative percent difference in the MS/MSD.
- B A target analyte or common laboratory contaminant was identified in the method blank. Its presence indicates possible field or laboratory contamination.
- D The sample(s) were diluted due to targets detected over the highest point of the calibration curve, or due to matrix interference. Dilution factors are included in the final results. The result is from a diluted sample.
- E The data exceeds the upper calibration limit; therefore, the concentration is reported as estimated.
- F RPD exceeded lab control limits.
- J The target analyte was positively identified below the MQL and above the SQL.
- U Analyte was not detected.
- L The LCS data for this analytical batch was reported below the laboratory control limits for this analyte. The department supervisor and QA Director reviewed data. The samples were either reanalyzed or flagged as estimated concentrations.
- H The LCS data for this analytical batch was reported above the laboratory control limits. Supporting QC Data were reviewed by the Department Supervisor and QA Director. Data were determined to be valid for reporting.
- K Sample analyzed outside of recommended hold time.

JN A combination of the "N" and the "J" qualifier. The analysis indicates that the analyte is "tentatively identified" and the associated numerical value may not be consistent with the amount actually present in the environmental sample.

BRL Below Reporting Limit.

RL Reporting Limit

MDL Method Detection Limit

PQL Practical Quantitation Limit

Jason Henry:

We are reporting to you the results of the analyses performed on the samples received under the project name referenced above and identified with the XENCO Report Number 397102. All results being reported under this Report Number apply to the samples analyzed and properly identified with a Laboratory ID number. Subcontracted analyses are identified in this report with either the NELAC certification number of the subcontract lab in the analyst ID field, or the complete subcontracted report attached to this report.

Unless otherwise noted in a Case Narrative, all data reported in this Analytical Report are in compliance with NELAC standards. Estimation of data uncertainty for this report is found in the quality control section of this report unless otherwise noted. Should insufficient sample be provided to the laboratory to meet the method and NELAC Matrix Duplicate and Matrix Spike requirements, then the data will be analyzed, evaluated and reported using all other available quality control measures.

The validity and integrity of this report will remain intact as long as it is accompanied by this letter and reproduced in full, unless written approval is granted by XENCO Laboratories. This report will be filed for at least 5 years in our archives after which time it will be destroyed without further notice, unless otherwise arranged with you. The samples received, and described as recorded in Report No. 397102 will be filed for 60 days, and after that time they will be properly disposed without further notice, unless otherwise arranged with you. We reserve the right to return to you any unused samples, extracts or solutions related to them if we consider so necessary (e.g., samples identified as hazardous waste, sample sizes exceeding analytical standard practices, controlled substances under regulated protocols, etc).

We thank you for selecting XENCO Laboratories to serve your analytical needs. If you have any questions concerning this report, please feel free to contact us at any time.

Respectfully,

Brent Barron, II

Flagging Criteria

- X** In our quality control review of the data a QC deficiency was observed and flagged as noted. MS/MSD recoveries were found to be outside of the laboratory control limits due to possible matrix /chemical interference, or a concentration of target analyte high enough to effect the recovery of the spike concentration. This condition could also effect the relative percent difference in the MS/MSD.
- B** A target analyte or common laboratory contaminant was identified in the method blank. Its presence indicates possible field or laboratory contamination.
- D** The sample(s) were diluted due to targets detected over the highest point of the calibration curve, or due to matrix interference. Dilution factors are included in the final results. The result is from a diluted sample.
- E** The data exceeds the upper calibration limit; therefore, the concentration is reported as estimated.
- F** RPD exceeded lab control limits.
- J** The target analyte was positively identified below the MQL and above the SQL.
- U** Analyte was not detected.
- L** The LCS data for this analytical batch was reported below the laboratory control limits for this analyte. The department supervisor and QA Director reviewed data. The samples were either reanalyzed or flagged as estimated concentrations.
- H** The LCS data for this analytical batch was reported above the laboratory control limits. Supporting QC Data were reviewed by the Department Supervisor and QA Director. Data were determined to be valid for reporting.
- K** Sample analyzed outside of recommended hold time.

JN A combination of the "N" and the "J" qualifier. The analysis indicates that the analyte is "tentatively identified" and the associated numerical value may not be consistent with the amount actually present in the environmental sample.

BRL Below Reporting Limit.

RL Reporting Limit

MDL Method Detection Limit

PQL Practical Quantitation Limit

Nonconformance Documentation

Contact: _____ Contacted by: _____ Date/Time: _____

Regarding: _____

Corrective Action Taken: _____

- Check all that apply:
- Cooling process has begun shortly after sampling event and out of temperature condition acceptable by NELAC 5.5.8.3.1.a.1.
 - Initial and Backup Temperature confirm out of temperature conditions
 - Client understands and would like to proceed with analysis
