Subject: Commingling of Production
Julian E. Simon Federal Lease
Empire Abo Field
Eddy County, New Mexico

Mr. A. L. Porter, Jr. (3)
Secretary-Director
New Mexico Oil Conservation Commission
Post Office Box 871
Santa Fe, New Mexico

Dear Mr. Porter:

Reference is made to Mr. D. S. Nutter's letter of May 7, 1964, concerning our request to commingle Empire Abo production from the Julian E. Simon Lease with other Empire Abo production presently being commingled at Storage System III. We are re-submitting our request for administrative approval to commingle the Julian E. Simon Lease into Storage System III along with changes in our Storage System III to comply with the minimum standards set forth in the Commission's "Manual for Installation and Operation of Commingling Facilities." Our revisions to Storage System III include the elimination of a common testing line and the installation of samplers.

Pan American Petroleum Corporation hereby submits application for the commingling of oil production from the Julian E. Simon Federal No. 1, located in Unit M, Section 4, T-18-S, R-27-E, with other Empire Abo Pool production at the Empire Abo Storage System III.

In support of our request for exemption without notice and hearing to Rule 309-B to permit the commingling in common facilities of oil production from leases of diversified ownership, the following is submitted:

1. Oil production from various federal leases with wells completed in the Empire Abo Pool is presently commingled at the Empire Abo Storage System III, located in the SW/4 SW/4, Section 3, T-18-S, R-27-E. Permission to commingle production and to produce more than sixteen wells into a common tank battery was obtained May 25, 1959, Order No. R-1399. Production from each lease is metered and sampled separately prior to commingling, utilizing A. O. Smith T-6 temperature compensated meters. Production from the Julian E. Simon will likewise be metered and sampled separately with an A. O. Smith temperature compensated meter.

Page 2
Mr. A. L. Porter Jr.
May 20, 1964

2. The A. O. Smith T-6 meter will be proved monthly in a 10-barrel prover tank.
3. The BS&W content will be determined every eight days and the production from each lease recorded.
4. In that all wells produce from a common source of supply and the gravity of the liquid hydrocarbons from each lease is the same, the commercial value of the commingled production will be the same as the sum of present commingled production and the production from the Julian E. Simon Federal No. 1.
5. All parties owning an interest in the Julian E. Simon Federal Lease and the purchaser of the commingled production have been notified by certified mail of our intention to commingle production from these leases.
6. Plots of the leases, showing the location of wells and the formation in which they are completed are attached.
7. Schematic diagram of the proposed installation is attached.

To comply with the minimum standards set forth by the Commission's "Manual for the Installation and Operation of Commingling Facilities," we have eliminated the common test line and have added samplers with each lease meter and test meter. All leases having four or more wells will have a lease test separator. On the two well leases, the Malco "K" and Mann Federal, we will shut-in one well to test the other. These revisions are shown on our attached schematic diagram.

Yours very truly,

V. E. Staley
Area Superintendent

Attention: Mr. V. E. Staley

Gentlemen:

Reference is made to your request for authority to commingle Empire-Abo production from your Julian E. Simon Lease with other Empire-Abo production presently being commingled in your Storage System III located in the S $\frac{1}{4}$ /SW $\frac{1}{4}$ of Section 3, Township 18 South, Range 27 East, Eddy County, New Mexico. Empire-Abo Storage System III handles the production from several separate leases and was authorized by Order No. 1-1399 May 23, 1959.

Inasmuch as this commingling installation, neither now nor as revised to include the Simon Lease, complies with the minimum standards set forth for commingling installations in the Commission's "Manual for the Installation and Operation of Commingling Facilities," we cannot grant administrative approval to the proposed revision. It was the Commission's thought at the time the aforesaid manual was adopted to not require revision of the existing installations which did not comply with the manual until such time as additional work was necessary on the installations. If you wish to revise the installation, particularly in the area of the common testing line and the attendant valves, in order that the installation will comply with the commingling manual, we will be happy to process your application for administrative approval of the inclusion of the Simon Lease. Otherwise, it will be necessary for this matter to go to a hearing, and in all probability, Pan American will be expected to show cause why the existing installation should not be revised at this time.

Very truly yours,

Daniel S. Nutter
Chief Engineer

Gentlemen:

Your letter of March 25, 1964 requests approval to commingle Abo oil produced from lease LC 070937 in the SW $\frac{1}{4}$ sec. 4, T. 18 S., R. 27 E., with your Abo storage system III, in the SW $\frac{1}{4}$ SW $\frac{1}{4}$ sec. 3, T. 18 S., R. 27 E., Eddy County, New Mexico, into which oil is commingled from leases; NM 025530, NM 025604, LC 061783-A, LC 061783-B, and LC 065478-B.

The method of commingling described by your letter is hereby approved subject to like approval by the New Mexico Oil Conservation Commission.

You are requested to notify the District Engineer, U. S. Geological Survey, Drawer U, Artesia, New Mexico, when the installation is completed and operative so that an inspection can be made.

Sincerely yours,

JOHN A. ANDERSON
Regional Oil and Gas Supervisor

Mr. M. L. Armstrong
New Mexico Oil Conservation Commission
Post Office Drawer "J"
Artesia, New Mexico

Dear Sir:

Pan American Petroleum Corporation hereby requests permission to temporarily store, off-lease, oil production from our Julian E. Simon-Federal Well No. 1, located in Unit M, Section 4, T-18-S, R-27-E.

Pending administrative approval of our commingling application submitted March 25, 1964, we desire to store the oil temporarily in an appropriate storage tank located at our Empire Abo Storage System III. (SW/4, SW/4, Section 3, T-18-S, R-27-E.)

The present storage for Simon production is a temporary storage tank at the well location. Due to a trucking problem, this temporary off-lease storage will minimize the loss of production due to this situation.

Your early consideration will be appreciated.

Yours very truly,

V. E. Staley
