The production from these wells is transported prior to measurement to a common tank battery, located at the Preston Federal #1, 1900' FSL & 850' FWL, Section 35-T20S-R24E, Unit L, NWSW, Eddy County, NM.

The purpose of the surface commingling, lease commingling, off lease storage and measurement is to reduce operating costs for storage and treating, thereby extending the economic life of each well. Without approval for utilizing existing batteries on adjacent leases, it will become necessary to build separate facilities for each well. This will greatly increase costs and shorten the economic life of the wells.

Because working and royalty interests for the wells are different, oil from each of the wells will be measured by turban equipment prior to surface commingling. Gas from the wells will also be metered separately. This metering will ensure that all production from each of the wells is equitably accounted for with no significant effect on your revenue. The production is from the following formations Dagger Draw Upper Penn. South.

The following is enclosed:

A map showing the location of the wells.

A diagram of the proposed measurement equipment, separators and storage tanks in accordance with the "Manual of Installation and Operation of Commingling Facilities".

Notification of working interest, royalty interest and overriding royalty interest owners.

Notification to the Bureau of Land Management.

If you should have any questions or need further information, please give me a call at (505) 748-4201 (direct line).

Thank you for your cooperation.

Sincerely,

A handwritten signature in black ink that reads "Pamela S. Harris". The signature is written in a cursive style with a large initial 'P'.

The proposed operation is described in detail on the attached diagrams.

A map is enclosed showing the location of all the wells that will contribute production to the proposed commingling/common storage facility.

A schematic diagram is also attached which clearly identifies all equipment that will be utilized.

The storage and measuring facility is located at NWSW-1/4, Sec. 35, T20S, R24E, Federal lease: Preston Federal #1, Eddy Co. NM. BLM will be notified if there is any future change in the facility location.

Details of the proposed method of allocating production to contributing sources is as follows:

Oil will be transported off lease prior to measurement and will be measured by turban metering equipment. Gas will also be measured separately. Total sales volume will be allocated back to individual wells based on daily well test.

The working interest owners have been notified of the proposal.

The proposed commingling of production is in the interest of conservation and will not result in reduced royalty or improper measurement of production.

The purpose of the surface commingling, lease commingling, off lease storage and measurement is to reduce operating costs for storage and treating, thereby extending the economic life of each well. Without approval for utilizing existing batteries on adjacent leases, it will become necessary to build separate facilities for each well. This will greatly increase costs and shorten the economic life of the wells.

The proposed commingling is necessary for economic operation of the above referenced leases.

We understand that the request approval will not constitute the granting of any right-of-way or construction rights not granted by the lease instrument. And, we will submit within 30 days an application for right-of-way approval to the BLM's Realty Section in your office if we have not already done so.
