Re: Clifford Cone, et al  
Cuiwin Queen Unit, well #13  
Unit A, Section 1.  
T 19 S - R 30 E.  
NMMPM Eddy county, N.M.

Mr. Joe Ramey:

Under administrative Order WFX-468, subject well was recently converted to water injection.

However; under the 600 psi, maximum pressure allowable and due to the tight 'Queen sand' formation, we are unable to maintain sufficient injection rate for an efficient flood pattern in this area.

We respectfully request raising the (well head) pressure allowable to a maximum of 1600 psi.

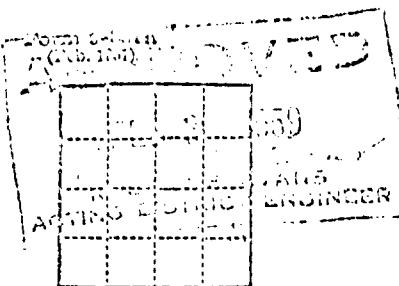

A copy of the original 'frac job' showing frac pressures in excess of 2000 psi, is attached.

Sincerely yours

*Don Bell*  
Don R. Bell / Prod. Supt.

The elevation of the derrick floor above sea level is 3513 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

On 12-26-59 this well was perforated at 3092-3103' 4 jets per ft.  
3110-3126' 3 jets per ft. Treated w/ 750 gals. regular acid w/  $\frac{1}{2}$ " sand per gal. (Cardinal) and fraced w/10,000 gals. oil and 10,000# sand. Fraced at 38.4 RPM at 2050# and flushed at 38.5 RPM at 2200#. Job completed 11:53 p. m. 12-26-59. Now recovering load oil.

FEB 2 1960

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
