RE: Application for Authorization to Inject
Wood, McShane & Thams
South Leonard (Queen) Unit, Well No. 13
Lea County, New Mexico

Gentlemen:

Enclosed please find Form C-108, Application for Authorization to Inject and attachments thereto.

If you have any questions regarding this application, please contact me at our Monahans, Texas office captioned below.

Sincerely,

J. MCSHANE, INC. for
WOOD, MCSHANE & THAMS

R. Cory Richards
Petroleum Geologist

APPLICATION FOR AUTHORIZATION TO INJECT

- I. Purpose: Secondary Recovery Pressure Maintenance Disposal Storage
Application qualifies for administrative approval? yes no
- II. Operator: Wood, McShane & Thams
Address: P. O. Box 968, Monahans, TX 79756
Contact party: Cory Richards, Geologist Phone: (915)943-7531
- III. Well data: Complete the data required on the reverse side of this form for each well proposed for injection. Additional sheets may be attached if necessary.
- IV. Is this an expansion of an existing project? yes no
If yes, give the Division order number authorizing the project R-3421.
- V. Attach a map that identifies all wells and leases within two miles of any proposed injection well with a one-half mile radius circle drawn around each proposed injection well. This circle identifies the well's area of review.
- * VI. Attach a tabulation of data on all wells of public record within the area of review which penetrate the proposed injection zone. Such data shall include a description of each well's type, construction, date drilled, location, depth, record of completion, and a schematic of any plugged well illustrating all plugging detail.
- VII. Attach data on the proposed operation, including:
1. Proposed average and maximum daily rate and volume of fluids to be injected;
 2. Whether the system is open or closed;
 3. Proposed average and maximum injection pressure;
 4. Sources and an appropriate analysis of injection fluid and compatibility with the receiving formation if other than reinjected produced water; and
 5. If injection is for disposal purposes into a zone not productive of oil or gas at or within one mile of the proposed well, attach a chemical analysis of the disposal zone formation water (may be measured or inferred from existing literature, studies, nearby wells, etc.).
- *VIII. Attach appropriate geological data on the injection zone including appropriate lithologic detail, geological name, thickness, and depth. Give the geologic name, and depth to bottom of all underground sources of drinking water (aquifers containing waters with total dissolved solids concentrations of 10,000 mg/l or less) overlying the proposed injection zone as well as any such source known to be immediately underlying the injection interval.
- IX. Describe the proposed stimulation program, if any.
- * X. Attach appropriate logging and test data on the well. (If well logs have been filed with the Division they need not be resubmitted.)
- * XI. Attach a chemical analysis of fresh water from two or more fresh water wells (if available and producing) within one mile of any injection or disposal well showing location of wells and dates samples were taken.
- XII. Applicants for disposal wells must make an affirmative statement that they have examined available geologic and engineering data and find no evidence of open faults or any other hydrologic connection between the disposal zone and any underground source of drinking water.
- XIII. Applicants must complete the "Proof of Notice" section on the reverse side of this form.
- XIV. Certification

I hereby certify that the information submitted with this application is true and correct to the best of my knowledge and belief.

Name: Cory Richards Title Petroleum Geologist

Signature: Cory Richards Date: 04/20/90

- * If the information required under Sections VI, VIII, X, and XI above has been previously submitted, it need not be duplicated and resubmitted. Please show the date and circumstance of the earlier submittal.

III. WELL DATA

- A. The following well data must be submitted for each injection well covered by this application. The data must be both in tabular and schematic form and shall include:
- (1) Lease name; Well No.; location by Section, Township, and Range; and footage location within the section.
 - (2) Each casing string used with its size, setting depth, sacks of cement used, hole size, top of cement, and how such top was determined.
 - (3) A description of the tubing to be used including its size, lining material, and setting depth.
 - (4) The name, model, and setting depth of the packer used or a description of any other seal system or assembly used.

Division District offices have supplies of Well Data Sheets which may be used or which may be used as models for this purpose. Applicants for several identical wells may submit a "typical data sheet" rather than submitting the data for each well.

- B. The following must be submitted for each injection well covered by this application. All items must be addressed for the initial well. Responses for additional wells need be shown only when different. Information shown on schematics need not be repeated.
- (1) The name of the injection formation and, if applicable, the field or pool name.
 - (2) The injection interval and whether it is perforated or open-hole.
 - (3) State if the well was drilled for injection or, if not, the original purpose of the well.
 - (4) Give the depths of any other perforated intervals and detail on the sacks of cement or bridge plugs used to seal off such perforations.
 - (5) Give the depth to and name of the next higher and next lower oil or gas zone in the area of the well, if any.

XIV. PROOF OF NOTICE

All applicants must furnish proof that a copy of the application has been furnished, by certified or registered mail, to the owner of the surface of the land on which the well is to be located and to each leasehold operator within one-half mile of the well location.

Where an application is subject to administrative approval, a proof of publication must be submitted. Such proof shall consist of a copy of the legal advertisement which was published in the county in which the well is located. The contents of such advertisement must include:

- (1) The name, address, phone number, and contact party for the applicant;
- (2) the intended purpose of the injection well; with the exact location of single wells or the section, township, and range location of multiple wells;
- (3) the formation name and depth with expected maximum injection rates and pressures; and
- (4) a notation that interested parties must file objections or requests for hearing with the Oil Conservation Division, P. O. Box 2088, Santa Fe, New Mexico 87501 within 15 days.

NO ACTION WILL BE TAKEN ON THE APPLICATION UNTIL PROPER PROOF OF NOTICE HAS BEEN SUBMITTED.

NOTICE: Surface owners or offset operators must file any objections or requests for hearing of administrative applications within 15 days from the date this application was mailed to them.

44 LEGAL NOTICE
April 22, 1990

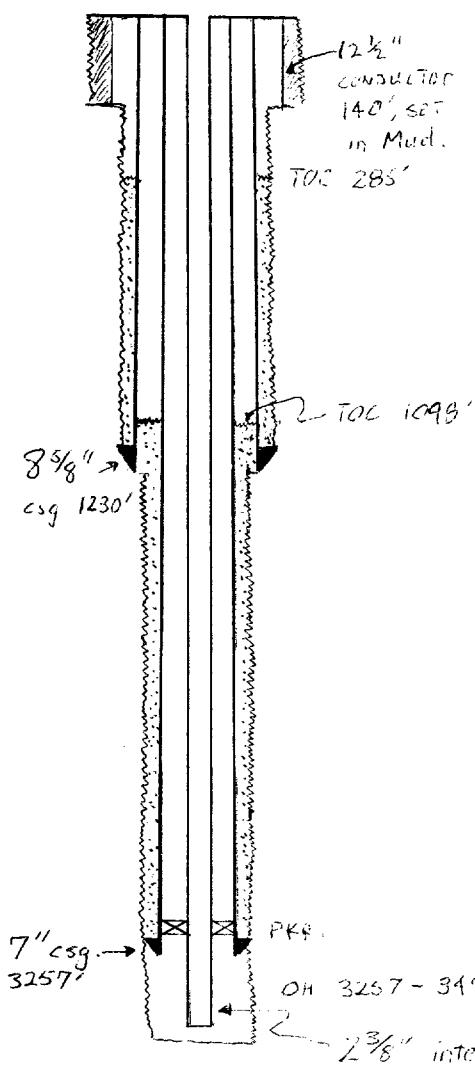

NOTICE is hereby given of the Application of Wood, McShane & Thams, P.O. Box 968, Monahans, Texas 79756 to the Oil Conservation Division, New Mexico Energy & Minerals Department for approval of the following injection well for the purpose of enhanced oil recovery. Direct all inquiries regarding this application to Cory Richards, Geologist, of Wood, McShane & Thams at (915) 943-7531.

The applicant proposes to inject produced water into the Queen formation, which is productive of oil and gas. The proposed injection is on the South Leonard Queen Unit, Well number 13, located 1980' FSL and 1980' FWL of Section 24, Unit letter K, T26S, R37E in Lea County. Water will be injected into the Queen formation through subsurface depths 3257' to 3490'. Expected maximum injection rate of 600 BWPD with an average injection pressure of 1600 p.s.i.

Interested parties must file objections or requests for hearing with the Oil Conservation Division, P.O. Box 2088, Santa Fe, New Mexico, 87501 within fifteen (15) days.

(or describe any other casing-tubing seal).

Other Data1. Name of the injection formation Queen Sand2. Name of Field or Pool (if applicable) South Leonard Unit3. Is this a new well drilled for injection? Yes NoIf no, for what purpose was the well originally drilled? Oil Production4. Has the well ever been perforated in any other zone(s)? List all such perforated intervals and give plugging detail (sacks of cement or bridge plug(s) used) No5. Give the depth to and name of any overlying and/or underlying oil or gas zones (pools) in this area. None known

Wood, McShane & Thams
South Leonard Queen Unit #13

Form 108-C, Item III.

Geologic Data on Injection Zone

The South Leonard Unit in southeast Lea County of New Mexico produces from the Queen formation found at an average depth of 3350 feet below the surface in this area. The Queen formation is best described as a series of sandstone stringers that comprise the "main pay" interval, which averages 30 feet thick. On the western edge of the unit, a separate sand body overlies the "main pay" and varies in thickness.

The lithologies of both sand bodies are similar; fine to very fine grained sandstones cemented with a calcareous cement. Porosities average 14% with water saturations in the range of 35%.

There are no known drinking water zones above the Queen formation in this area. In fact, the make-up for this water flood project must come from the San Andres formation which is below the Queen formation. The water analysis for the San Andres formation indicates dissolved solids are over 69,000 mg/l.

Form 108-C, Item XI.

There are no fresh water wells within one mile of the proposed injection well.

Wood, McShane & Thams
South Leonard Queen Unit #13

Form C-108, Item VII.

Proposed Operation:

1. Proposed average injection rate is approximately 360 BWPD with maximum injection volume of 600 BWPD.
2. Injection system is closed.
3. Proposed average injection pressure is approximately 1100 p.s.i. with a maximum expected injection pressure of 1600 p.s.i.
4. Analysis of injection fluids on attached sheets. Make-up water is compatible with receiving formation and has been used in this project for many years with no problems. Make-up water is from the San Andres formation and is analyzed from a sample taken from WSW #1, which is the only source of make-up water for this lease.
