13 1978

Gentlemen:

Your Wylie Well No. 3 located in Unit K of Section 9, T-21-S, R-38-E, is being reported on Commission Form C-115 as a salt water disposal well, and a field inspection confirmed that the well is being used for disposal purposes. Even though this well was authorized as a water injection well for the Sohio Petroleum Company Littman San Andres Unit which terminated in 1970, approval to utilize it as a disposal well must be obtained from the Santa Fe office of the Commission. Such approval can be obtained by writing to that office requesting reclassification to a salt water disposal well.

We have nothing in our file covering the conversion of this well from a producer to an injection well. Since it is on federal land, please submit the appropriate form to the U. S. G. S. covering the work done. A copy of this report will be forwarded to this office by the U. S. G. S. after approval.

Further, apparently the injected volumes have never been reported on Form C-120-A as required by Commission Rules and Regulations. It will, therefore, be necessary for you to bring our records up to date by filing Form C-120-A showing the cumulative injected volume through December 31, 1977. Thereafter, Form C-120-A must be submitted monthly in accordance with Commission Rules 704 and 1120.

Yours very truly,

OIL CONSERVATION COMMISSION

Re: Wiley Well #3
Unit K, Section 9
T21S, R38E
Lea County, New Mexico

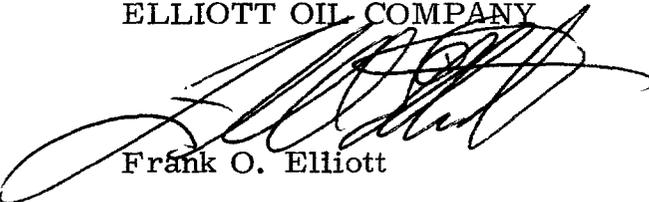

Gentlemen:

Please consider this a request for re-classification of the above well from a water injection well to a salt water disposal well.

It was our understanding when we took these properties back from Sohio Petroleum Company in 1970, that this well was then classified as a salt water disposal well, but apparently this is not the case, and it is our intention to continue using this well to dispose of approximately fifteen (15) barrels per day of San Andres produced water, injecting it back into the San Andres formation.

Very truly yours,

ELLIOTT OIL COMPANY

Frank O. Elliott

1. The first part of the document discusses the importance of maintaining accurate records of all transactions. It emphasizes that proper record-keeping is essential for the integrity of the financial system and for the ability to detect and prevent fraud. The text notes that without reliable records, it would be difficult to verify the accuracy of financial statements and to identify any irregularities.

2. The second part of the document outlines the specific procedures that should be followed when recording transactions. It details the steps for identifying the nature of the transaction, determining the appropriate accounts to debit and credit, and ensuring that the entries are properly supported by evidence. The text stresses the need for consistency and accuracy in the recording process to ensure that the financial records are reliable and trustworthy.

3. The third part of the document discusses the importance of internal controls in the recording process. It explains that internal controls are designed to prevent errors and fraud by establishing a system of checks and balances. The text highlights the role of the recording process in internal controls and the need for a clear separation of duties to ensure that no single individual has control over the entire recording process.

4. The final part of the document provides a summary of the key points discussed and offers some concluding thoughts on the importance of the recording process. It reiterates that accurate and reliable records are the foundation of a sound financial system and that proper recording procedures are essential for maintaining the integrity of those records. The text concludes by encouraging all individuals involved in the recording process to adhere to the highest standards of accuracy and integrity.

If well is directionally drilled, give subsurface locations and measured and true vertical depths for all markers and zones pertinent to this work.)

A Baker Model D Packer is set at 4300 with cement line tubing set to that depth. San Andres produced water is being injected into the open hole from 4327-4359.

2 3/8" TRG SAN ANDRES

It was our understanding that Sohio Petroleum Co. had filed this report prior to the abandonment of the Littman-San Andres Unit in 1970, but according to Mr. Sexton of the N. M. Oil Conservation Commission, this was not the case, and we are filing this report to update your records as to the status of this well.

This well was an injection well in the Littman San Andres Unit. It was retained as a SWD well when the unit terminated 10-1-70

18. I hereby certify that the foregoing is true and correct.
