Attention: Mr. Ed Hasely

Re: Amendment of Division Order No. SWD-374

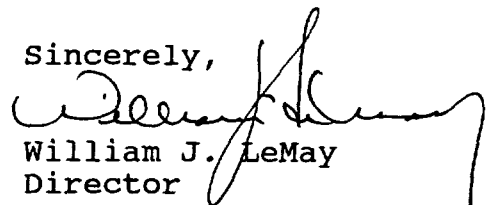

Dear Mr. Hasely:

Reference is made to your request dated January 22, 1993, for authorization to accept third party produced water for disposal into the San Juan 31-6 Unit Well No. 301. It is our understanding that the subject well was permitted for disposal by Order No. SWD-374, dated September 7, 1989. It is further our understanding that the additional water accepted will be produced from the Basin-Fruitland Coal Gas Pool.

You are hereby authorized to accept and dispose of such additional produced water into the San Juan 31-6 Unit Well No. 301.

Please note that while the Division does not currently classify disposal wells as commercial/non-commercial, such classification may be forthcoming in the near future, and as such, the San Juan 31-6 Unit Well No. 1 may fall into the commercial classification at that time. If classified as commercial, the subject well will be subject to additional requirements as may be promulgated at a later time by the Environmental Protection Agency.

Sincerely,

William J. LeMay
Director

RE: San Juan 31-6 #301 SWD
Third Party Water Disposal

Dear Mr. Catanach:

Per our discussion on January 21, 1993, Phillips Petroleum Company, as operator of the San Juan 31-6 Unit (31-6), plans to dispose of third party produced water at the San Juan 31-6 #301 SWD facility. The San Juan 31-6 #301 SWD facility is located in the NE Section 6-T30N-R6W, Rio Arriba County, New Mexico.

The third party water will come from 5 wells in the Northeast Blanco Unit (NEBU). Although ownership in the NEBU wells and the San Juan 31-6 Unit are not identical, there are many common owners. This arrangement is predicated by the fact that there are different operators of these respective units. The specific well names and locations are attached along with water analyses for each well. Phillips understands this is a common practice entertained by area operators.

The owners of the San Juan 31-6 Unit Facility will receive payment for the disposal of the NEBU water. The payment will consist of NEBU's share of the operating cost, plus a fee to recoup NEBU's share of the original capital investment of the SWD facility. The payment is not intended to reap a profit.

The San Juan 31-6 #301 SWD facility currently disposes of approximately 1500 BPD of produced water from the 31-6. All the water is from the Fruitland Coal member of the Fruitland Formation, which is the same formation as the NEBU water. There will be no compatibility problems associated with the mixing of the 31-6 water with NEBU water.

Phillips Petroleum Company will appreciate your timely approval of the subject proposal. If you have any questions or need further information, please call me at (505) 599-3460.

Sincerely,

PHILLIPS PETROLEUM COMPANY

Ed Hasely
Environmental Engineer
