Recompletion to Delaware SWD per SWD-483

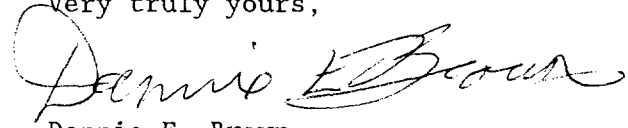

Dear Mr. Catanach:

SWD-483 authorized a disposal zone of 6410-7427' on the captioned well. When the well was recompleted as a SWD, the bridge plug at 7550' was also drilled out, thereby opening the perms from 7608-7625' & 7763-7811' for additional disposal capacity.

The OCD geologist for this district has indicated that the disposal interval is all within the Delaware formation, but has also stated that we needed to notify Santa Fe of the additional perforated interval.

If you have any questions or need any further information, please do not hesitate to contact me.

Very truly yours,

Donnie E. Brown
Vice President, Engineering
