RE: Injection Pressure Increase
Querecho Plains BS Sand Unit No. 2
(API No. 30-025-29679)
Lea County, New Mexico

Dear Mr. Calvert:

Reference is made to your request received in our office on July 26, 2002, to increase the surface injection pressure on the above referenced well. This request is based on a step rate test conducted on the well. We have reviewed the test results and feel an increase in injection pressure on this well is justified at this time.

You are therefore authorized to increase the surface injection pressure on the following well:

Table with 2 columns: Well Identification, Maximum Surface Injection Pressure. Row 1: Querecho Plains BS Sand Unit Well No. 2, 2250 PSIG. Below table: Located in Unit N of Section 23, Township 18 South, Range 32 East, Lea County, New Mexico.

The Division Director may rescind this injection pressure increase if it becomes apparent that the injected water is not being confined to the injection zone or is endangering any fresh water aquifers.

Sincerely,

Handwritten signature of Lori Wrotenbery
