**Abstract**—The purpose of this study was to determine if there were differences in the prevalence of musculoskeletal disorders between two groups of nurses working in different departments of a hospital. The subjects were 60 female nurses who worked in the intensive care unit (ICU) and 60 female nurses who worked in the medical-surgical department. Data were collected by means of a self-administered questionnaire. The results showed that the prevalence of musculoskeletal disorders was higher among ICU nurses than among medical-surgical nurses. The most prevalent disorder was low back pain, followed by neck pain and shoulder pain.
