Re: Request for Administrative Approval  
To Surface Commingle the Blinebry  
Oil and Drinkard Oil Pool on Getty's  
R. L. Brunson Wells Nos. 1 and 2,  
Section 4, T-22-S, R-37-E,  
Lea County, New Mexico

Gentlemen:

Getty Oil Company respectfully requests permission to commingle oil production from the Blinebry Oil and Drinkard Oil Pools on its R. L. Brunson Lease, Wells Nos. 1 and 2 in accordance with Rule 303 (b) of the New Mexico Oil Conservation Commission Rules and Regulations. The commingling is to be done on the surface at a common tank battery.

In support of this Application the following items are attached:

1. A schematic diagram of the proposed commingling installation.
2. A plat showing the location of all wells on the R. L. Brunson Lease and the zone from which each well is producing.
3. The hydrocarbon gravity, value, and volume from each zone are as follows:

ZONE	NO. OF WELLS	API GRAVITY	NORMAL UNIT PRICE	AVERAGE DAILY PRODUCTION
BLINEBRY OIL	1	42.1	\$10.13	3 BO
DRINKARD OIL	1	39.5	\$10.13	10 BO

The gravity of the commingled liquid hydrocarbon production from the Blinebry and Drinkard Pools is expected to be 40.9° API. Based on previous experiences in surface commingling of Drinkard and Blinebry Zones no decrease in the value of the commingled liquid hydrocarbon production is anticipated.

In addition the following information is submitted:

NMOCC-Santa Fe  
R. L. Brunson-Commingle  
Mr. A. L. Porter, Jr.  
August 8, 1974

PAGE NO. 2

1. Royalty and Working Interest Ownership are common for both zones.
2. NMOCC Administrative Order PC-294 dated 2-14-66 gave permission to surface commingle production from Well No. 1 (Blinebry) and Well No. 2 (Wantz Abo). The Wantz Abo was isolated and recompleted in the Drinkard Zone. The Blinebry Zone has been averaging 2 to 3 BOPD.

Well No. 2 was only recently completed in the Drinkard Zone. Several well tests prior to and including the initial potential have been averaging approximately 10 BOPD in the Drinkard Zone.

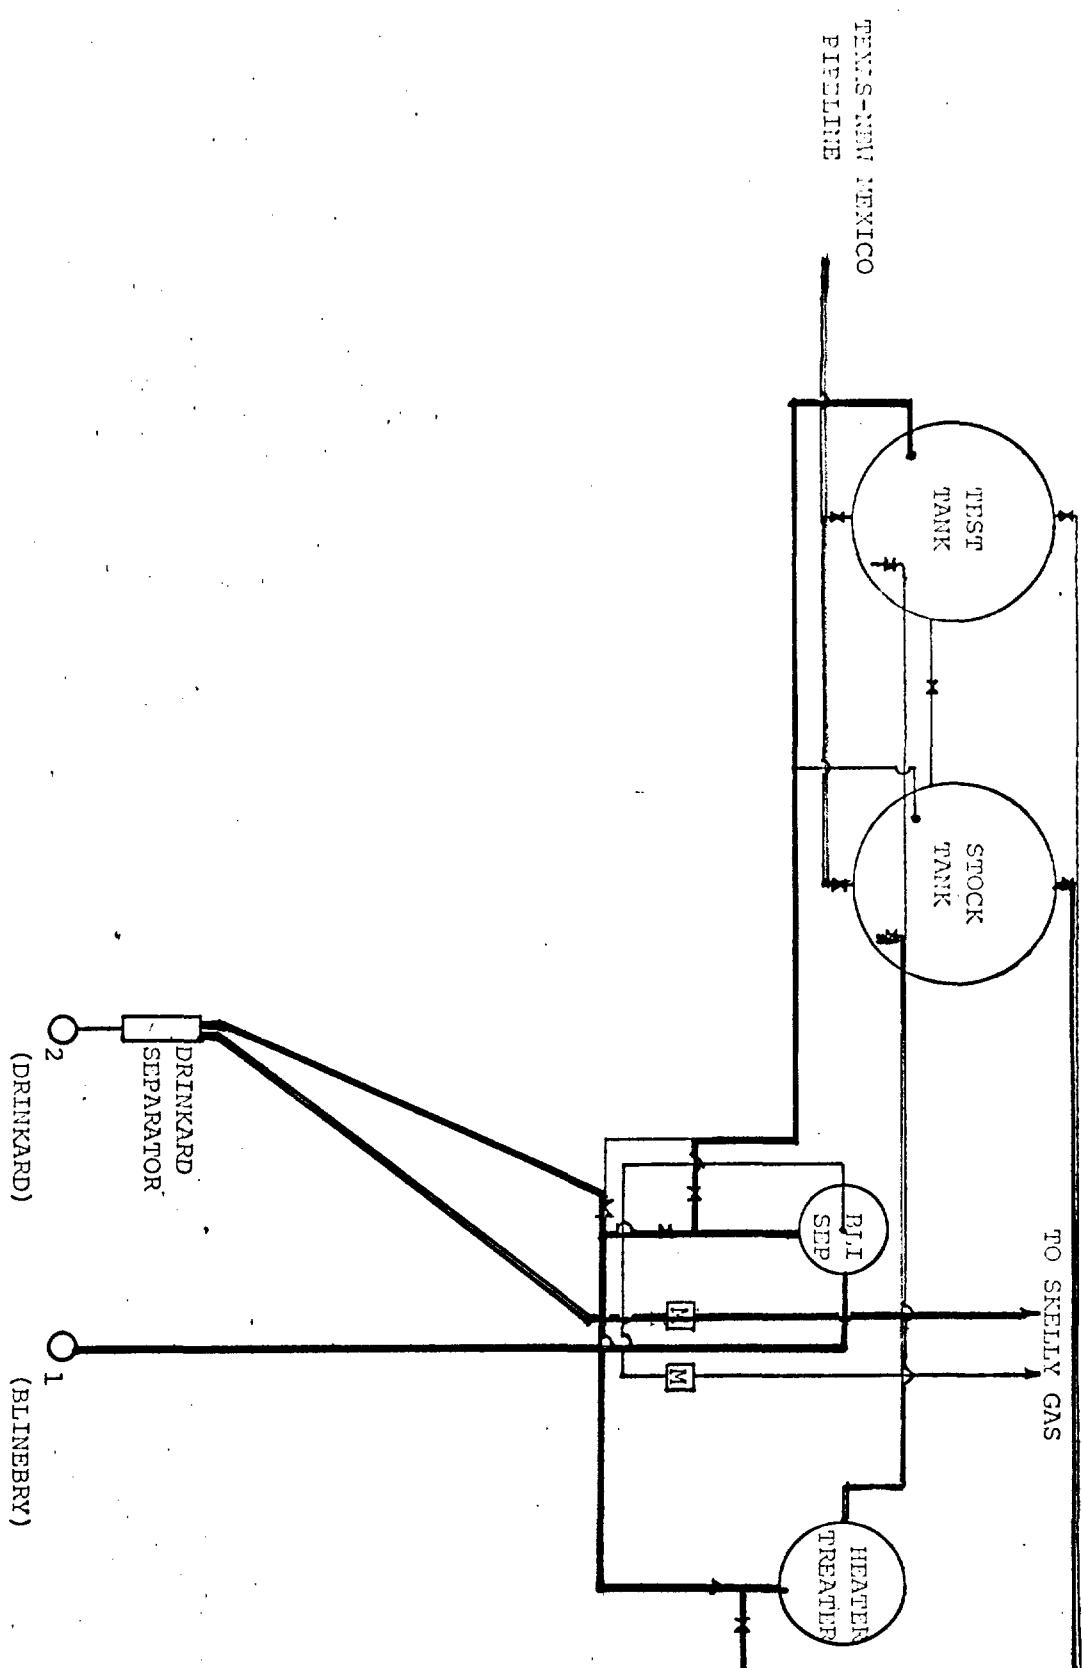

3. It is proposed to determine the production from each well and each zone from Monthly Well Tests.
4. Gas production will be determined by flowing through separate gas meters.

This Application to surface commingle is respectfully submitted for your consideration; and if additional information is needed, please advise.

Very truly yours,  
GETTY OIL COMPANY
