File No. 22-3

Request to Commingle Oil and  
Casinghead Gas, Wantz Granite  
Wash and Drinkard Pool  
Whitaker-Perkins Well No. 2  
Lea County, New Mexico

Mr. J. D. Ramey, Secretary Director  
New Mexico Oil Conservation Commission  
P. O. Box 2088  
Santa Fe, New Mexico 87501

Dear Sir:

Exxon Corporation is the operator of the Whitaker-Perkins Well No. 2, an oil well dually completed in the Wantz Granite Wash and Drinkard Pools, located in Unit Letter 'C', 760' FNL & 1,780' FWL of Section 12, T-22-S, R-37-E, Lea County, New Mexico.

Each zone is currently producing into its own separating and storage facilities. As oil runs are made, it is necessary to shut in the respective production because we have only one (1) storage tank for each pool.

It is requested that we be permitted to surface commingle this production and allocate between the pools on the basis of quarterly well tests. We are advised by the purchaser, The Permian Corporation (Trucks), that they have no objections to this proposal. The actual commercial value of the commingled production will not be appreciably less than the sum of the values of the production sold separately.

In support of this proposal, we are attaching the following:

1. Table I showing the initial production tests, gravity and classification of oil.
2. A plot of the proposed production facilities to commingle the Drinkard and Wantz Granite Wash Pools.
3. A lease plat showing the location of the well.

Your favorable consideration of this proposal will be appreciated.

Yours very truly,

D. L. Clemmer, Unit Head  
Oil & Gas Accounting
