Gentlemen:

Proposed Commingling - Elliott A-15 Lease

Continental Oil Company proposes to commingle the Drinkard and Penrose Skelly production from its Elliott A-15 lease. This lease is located in section 15, T-22S, R-37E, Lea County, New Mexico. The Brunson production from this lease will continue to produce into a separate battery since this production goes into a separate pipeline system.

At the present time the production from the Elliott B-15 lease is produced into separate tanks at the same battery location as the Elliott A-15 battery. It is proposed to re-vamp this entire battery location to better utilize available equipment, replace worn and unsightly equipment, conserve energy and abide by environmental protection requirements. As a result of this re-vamping we request permission to utilize a common test metering heater-treater. This vessel is to be installed with 3-way, 2-position valves with automatic control hook-up both up-stream and down stream of the vessel. This will prevent any possible mixing of lease/pool production in the test vessel.

Attached is a schematic showing proposed battery installation, plat showing wells to be served by commingled facility and letter from U.S.G.S. approving subject proposal.

Your early approval of this proposal is respectfully requested.

Yours very truly,

L. P. Thompson
