SUBJECT:  
Requesting Approval for  
Surface Commingling of  
Condensate Production from  
Rincon Unit, Well No. 130-E  
Sec 32, T-27-N, R-6-W  
Rio Arriba County, New Mexico

Union Oil Company of California, dba Unocal, requests permission to surface commingle condensate from its Rincon Unit, Well No. 130-E, Rio Arriba County, New Mexico. The following describes and demonstrates how Unocal proposes to allocate production under the context of BLM Onshore Oil and Gas orders for commingling, and under the New Mexico Oil Conservation Commission Manual for the Installation and Operation of Commingling Facilities.

The Rincon Unit No. 130-E well is a development gas well scheduled to be drilled by Unocal. The well is to be completed as a dual Dakota/Gallup producer; and it is anticipated that it will be ready for pipeline deliveries September 28, 1992.

Unocal is proposing to surface commingle produced fluids from individual separators into a common stock tank (Exhibit No. 1). Royalties will be paid on the liquid volumes sold from the tank.

The proposed location is within existing Dakota participating area (PA) within the Rincon Unit (Exhibit No. 2). Upon completion of the Gallup formation in this well, Unocal will apply to the Bureau of Land Management (BLM) for expansion of the Gallup PA to include this lease. The royalty in the two formations is the same. The lease is a state lease and is described in Exhibit No. 3.

Unocal is requesting from the New Mexico Oil Conservation Division, approval for surface commingling of the produced condensate and the following method for allocating production.

Unocal will conduct initial condensate production tests of equivalent time frames for each of the two zones. The condensate produced during the test period from each pool will be used to calculate an average daily rate (Exhibit No. 4, Part 1). Each month this rate will be multiplied by the days on production, to yield a volume produced for the month (Exhibit No. 4, Part 3). The corrected volumes will be allocated as per Exhibit 4, Part 5. To ensure the accuracy of the allocation factor, Unocal will retest the zones every six months after the initial test.

Should you have any questions or need any additional information to process this request, please feel free to contact me at the above letterhead address or phone.

Very truly yours,

Union Oil Company of California  
dba Unocal

EXHIBIT #4  
CONDENSATE  
ALLOCATION CALCULATIONS

1) Production Test completed on both zones, yields:

$$\text{Gallup Test Rate} = R_1 \text{ (BPD)}$$

$$\text{Dakota Test Rate} = R_2 \text{ (BPD)}$$

2) Days On / Month

$$\text{Gallup Days On} = A$$

$$\text{Dakota Days On} = B$$

3) i) Actual Total Monthly Gauge Volume:  $G$  (BPM)

ii) Calculated Individual Volumes:

$$\text{Gallup} = R_1 \times A$$

$$\text{Dakota} = R_2 \times B$$

$$\text{Total Volume} = R_1(A) + R_2(B)$$

4) Allocation Factor (AF):

$$AF = \frac{G}{R_1(A) + R_2(B)}$$

5) Corrected Allocation Volumes:

$$\text{Gallup} = AF_1 \times R \text{ (A)}$$

$$\text{Dakota} = AF_2 \times R \text{ (B)}$$
