Re: Commingle Order
PLC - 73

Dear Sir:

Stevens Operating Corporation is hereby applying for administrative approval to amend the above commingle order to include the following lease:

O'Brien "C" No. 1
Unit M, Section 1, T-7-S, R-28-E
Twin Lakes Devonian

The commingle facility and LACT will be located in the SW/4SE/4 of Section 21, Township 8 South, Range 29 East. The fluid from each well will go through a free water knock out and then through two-way separators. This will separate the water, oil, and gas from each lease. The oil, gas, and water from each lease will then be measured through provable meters with non-resettable counters.

The oil will be measured through a net oil computer with a 0-100% BS & W range probe assembly. This will give an accurate measurement of oil being produced from each lease. The oil will then be commingled and sent through another meter for total fluid and then go through a settling tank and into a 500 barrel storage tank to be sold through a LACT.

After measurement, the gas from each lease will then be commingled and sent through a check meter for total gas produced. It will then be sent to the sales point.

The water produced, after measurement from each lease, will be commingled and sent through a settling tank and storage tank for disposal. The produced water will be measured for total water produced and pumped to the White Lake Ranch produced water disposal.

Mr. Richard L. Stamets
