BP America Production Company requests administrative approval to amend an approved non-standard well location for the Gallegos Canyon Unit #583 in the Basin Fruitland Coal.

The NSL-4707 was previously granted and approved on March 7, 2002 at location 1630' from the West line and 440' from the South line. Due to the NAPI crop circles and after communications with Mr. Lopez of the NAPI Operations & Maintenance it was determined that the well location needed to be moved 10 additional feet from the west line and 5' closer to the south line. This will place the well a little further from the crop circle and make it possible to drill without harm to the crop area. The well location is unorthodox due to the fact it is less than 660' from the outer boundary of the proration unit. .

Attached is the amended Form C-102 showing the new location of the well. BP America is the only affected offset operator.

Should you have questions please call me at the below listed number.
