Re: West Bravo Dome Carbon Dioxide Gas Unit Agreement
Harding County, New Mexico,
2017 Plan of Development

Dear Mr. Sanchez:

Pursuant to Article 4.2 of the Unit Agreement for the Development and Operation of the West Bravo Dome Carbon Dioxide Gas Unit, and Division Order No. R-7707, Hess Corporation, unit operator, hereby submits the 2017 Plan of Development.

If there are any questions regarding this proposed Plan of Development for 2017, please contact me at (432) 758-6766.

Yours truly,
Hess Corporation

RE: Plan of Development: January 1, 2017 through December 31, 2017
West Bravo Dome Carbon Dioxide Gas Unit (WBDGU)
Harding County, New Mexico

Gentlemen:

With respect to the West Bravo Dome Carbon Dioxide Gas Unit (the "Unit") and in accordance with New Mexico Oil Conservation Order Number 7707, Hess Corporation, as Unit operator, hereby submits five (5) copies of the Plan of Development (POD) for January 1, 2017 through December 31, 2017.

Presently, there are seventy-four (74) producing carbon dioxide (CO₂) gas wells in the Unit. First unitized production began in December, 2008.

In 1984, the Unit originally contained 50,020.78 acres consisting of Federal, State and fee tracts. At the time, 20 wells were drilled and shut in due to lack of a market for the CO₂ and related infrastructure to produce the wells. The unit was contracted effective on November 15, 1994 to 34,655.33 acres. By Certificate of Effectiveness dated March 23, 2009, Hess adjusted the total unit acreage to 34,619.11 acres to account for slight errors in the size of tracts 2005 and 2011 and title failure to 38 acres under tract 2045. Effective January 1, 2011, the Unit was enlarged from 34,619 acres to 76,950 acres which is

where it remains today. The unit presently contains 122 tracts consisting of 20 Federal tracts (10.28%), 40 State tracts (20.79%) and 62 fee tracts (68.93%).

In the beginning of 2016 field production was at average daily rate of approximately 39 million cubic feet of CO₂ per day (MMscf/d). No new wells were drilled in 2016. During the year on average 19 out of 74 producing wells stayed shut-in to adjust for current company's CO₂ demand. Consequently, Hess was able to reduce operational costs by operating only one (out of two) compressors. Projected year-end daily production will be close to what it was in the beginning of 2016 (~ 39 MMscf/d).

The plan of development for 2017 will include the following:

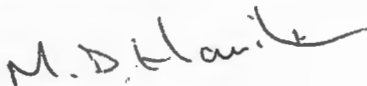

- There are no plans to drill new wells in this year as we expect to meet our projected CO₂ demand with the existing well stock.
- Additional data collection for optimizing reservoir management.
- Make production payments.
- Plan for a possible 2020 drilling program of up to 21 additional wells, contingent on projected CO₂ demand.
- Monitor and maintain existing infrastructure in accordance with State and Federal regulations.

Attached please see a spreadsheet showing the existing well inventory in West Brave Dome Carbon Dioxide Gas Unit.

If there are any questions regarding this proposed Plan of Development for 2017, please contact me at (432) 758-6766

Yours truly,

HESS CORPORATION

Mark Hamilton
Manager, Permian Operations

** The BLM's interest in these wells are slightly less than the other unit wells due to small unleased interests in the 640 acre drilling units. These are also estimated and subject to title review.

The 2012 Program consists of 20 wells to be drilled and completed as Tubb producers. In addition, the WBDGU 1829 211F, listed in the attached "Well Inventory" as "Previously drilled but not completed" will also be completed in 2012. One well will be drilled for ultimate completion as a water disposal well. There are 2 alternate wells in the list which have been permitted but will not be drilled unless needed.

West Bravo Dome Gas Unit, Harding County, New Mexico
