Drill through the presently plugged well plugs. Then intend to core bottom of well, wash down and make straddle tests and acidize at the depth of 2430 to 2480. We plan to use a Lynes straddle treating and testing for selective treating between and below before casing well. Then plan to acidize with 15% hydrochloric acid solution with sufficient amount to penetrate deep into formation to obtain possible gas production. After testing and treating if no production is had then we plan to drill deeper to the Pennsylvania.
