Bennett Petroleum Corporation 1776 Lincoln Street Denver, Colorado 80203

Subject: Abandoned Wells

Phelps Dodge #2, #3, #3-Y,

and #5, Colfax County,

New Mexico

Gentlemen:

Inspections of the subject locations have been made periodically, most recently on 2/6/80, 3/19/80, and 5/27/80. It should be noted that Well Nos. 3 and 3-Y reached their present depths more than one and onehalf years ago. Both of these locations were proposed for plugging (by Forms C-103) more than four months ago. It is apparent that this plugging for abandonment has not been done. Furthermore, the No. 3 well has been leaking cas from the annulus of the 10 3/4" casing and the 6 1/4" casing for at least six months and notices of this condition have been called (via telephone) to your office several times -- most recently on 3/21/80.

Well No. 5 appears to have been abandoned since 1/8/80, and Well No. 2 since 2/9/80. Apparently some plugging was done on the No. 2, although the plugging for abandonment has not been completed. Both of these locations are in bad condition, particularly at Well No. 2 where caving poses a hazard as do the open oily pits. If the pits at these covered in the immediate future, then the sites should locations are not be fenced. This is standard procedure and is cheap insurance against lawsuits.

Presumably you are aware that a well in this state must be properly plugged for abandonment within sixty days after drilling ceases. It is obvious that all of the foregoing wells are overdue for plugging. Please give this matter your immediate consideration.

Yours truly,

Carl Moora

District IV Supervisor
