	Well History	20	80		
	PSR 06-18-32: S.D. for sometime in 8" hole @	15-1/2	1010		
	4530, has made contract for add'l drlg. to	12-1/2	1820		
	6000', work to begin at once. With such a				
The state of the s	large hole @ this depth, good equipment and		Tbg. at		
	ample finances, these people are certainly	FOR	MATION REC	CORD	
	qiving everyone a good run for their money.	Elev. 5	5965 Tex.		
• ,	This contract will not only carry them thru	T. 5	5951 L&S		
	the Penn. but into the Ordivician, where the	Τ.			
	wonderful Big Lake pay of Texas occurs.	Ţ			
	PSR 06-24-32: Contractor arranging to resume wor	T			
	on new contract calling for drlg. to 6000'.	Т.			
	PSR 07-02-32: Drlg. below 4600. With an 8" hole	T			
	to 4530 this well is most promising as a real	T.			
	test of the lower Penn. & Ordivician forma-				
	tions; the latter being the formation out of	T. Con	tinued		

which wonderful production of light oil is being obtained in the Big Lake district of Texas.

- PSR 07-09-32: Drlg. below 4700.
- PSR 07-16-32: Drlg. below 4715 in grey sand. This test will soon be below the horizon of the McAdoo well, when they will be exploring in a new zone.
- PSR 07-23-32: S.D. @ 4717 in grey sand. Waiting for orders.
- PSR 08-20-32: Still S.D. @ 4717. This test was said to have been fully financed to 6000', & there is some mystery as to the cause of the prolonged S.D.
- PSR 10-29-32: Still S.D. @ 4717. Indications are these people are awaiting result of the McAdoo test.
- PSR 12-10-32: S.D. @ 4717. We observe these people have allowed considerable state acreage near this loc. to lapse for non-payment of rentals, from which we assume it is the purpose to abandon this test.
- PSR 12-24-32: S.D. @ 4717. This test is not been abandoned, we are advised by Mr. Allen Hover, an officer of the company. Will be carried down to @ least 5500', unless production is sooner encountered. However, work will not be resumed until spring.

N.M. PRO. & REF. CO. #1 McMullen 24-5N-16E Page 3

PSR 03-04-33: T.D. 4717. Preparing to resume drlg.
PSR 09-02-33: S.D. for many months at 4717. Mr. Alan Hover, in charge of this operation, advises that he expects to resume work before cold weather, & to carry the test to at least 6000', if necessary.

C-105 Rpts: Comp. 7-4-32; At TD - qtz, igneous, & metamorphic material.
