Memo

From

CARL ULVOG
SENIOR
PETROLEUM GEOLOGIST

To File

7/21 - John Webb (Omega Drilling Co.)
called. Astro-Tex well on McCarty Ranch
at TD 2911'. Had set 600' of 8 5/8"
cem. to surf. and now prep. to set
2300' of 4 1/2" for testing Q.H. (611' of
section?) Dowell supposed to cement.

This appears to be lower Permian
(probably Tumble) and shows - if any -
are probably in granite wash.
T.D. could well be in granite.

Memo

From

CARL ULVOG

SENIOR

PETROLEUM GEOLOGIST

To File - AstroTex #1-A Olympic St

8/4/75

New drilling supt. on job.
He was advised (on location) that
if well was abandoned, it
would be necessary to set
plug at bottom of $4\frac{1}{2}$ " ,
plus a plug across any perforations
in same, plus a 5 sack
plug at surf. with marker.

If $4\frac{1}{2}$ " did not reach Tubbs,
another plug needed in top
of that fm.
