Roy, we went out to catch some gas samples on the shut in stuff for some research that our Houston group is doing on April 24, 1992. We found annulus pressure on well number 2032-171k. The ubg pres was 305psi and the casing had 300 psi. While we had Bill on here working and we had a kill truck. We dropped a standing valve on this well. The ubg tested okay. We could pump in to the backside. I am faxing you a c-103 with my proposal. I would like to do the work the last two days of this week.

Thanks

Bill Prichard
