Sec. 31, Twp. 20N, Rge. 31E.

Dear Mr. Holden:

This is in answer to your letter of July 27th, 1951, pertaining to delinquent reports on the above caption wells. In reviewing the files on the above wells I find the following:

The Iceco #1 -

C-101, Notice of Intention to Drill was filed January 19, 1950, approved by me February 9, 1950. There is some question as to whether this well was drilled or not. If it was drilled we are in need of C-102, Miscellaneous Notices, C-103, Miscellaneous Report on Wells and C-105 which is a log of wells along with other pertinent data.

Iceco De Baca #2 -

For this well we have the surveyor's plat showing the exact location, C-102 and C-103, which gives an adequate account of the re-work which was accomplished on this well by Halliburton. We are lacking however, form C-105, which is a log of this well along with other information which is noted on the form. It may be the log for this well is not available since it is an old well, but if it is possible to obtain this information we are interested in having it.

Iceco Libby #1 -

We have only a C-101, Notice of Intention to Drill, dated April 19, 1950,

WORLD BANK GROUP  
WASHINGTON, D.C. 20547

approved by me April 22, 1950. I am under the impression that this well has been drilled and completed and is now delivering gas to your plant. If this is true we need the following forms: C-102 and C-103, covering the exact nature of the casing program as well as any other information on work that was done. These forms should give an account of whip stocking, shooting, plugging back, etc. We also need a C-105, which I am sure should be available for this well.

In my letter of June 1, 1951, to Mr. Don Schreiber, I briefly explained the use of forms C-110, Certificate of Compliance and Authorization to Transport Oil or Gas and form C-114, Gasoline and other Extraction Plant Monthly Reports, and which I have referred to in a recent letter to you. You will note that C-114 is not precisely for Carbon Dioxide production, however this is the form we intend to use until such time as we have a form for this specific reporting. The things that we are interested in pertaining to your operations are the amount of gas produced from each well, the liquids or solids extracted from this volume and where these liquids and solids are marketed.

It will probably be three or four weeks before I am in the vicinity of Tucumcari, but on my next trip to this area I will notify you so that we can get together for a discussion of these matters, however if you possibly can, I would like to have the above information before that time.

Very truly yours,

Elvis A. Utz  
Gas Engineer

# COMMISSION ON THE FUTURE OF THE OIL INDUSTRY

REPORT OF THE COMMISSION

1971

The Commission on the Future of the Oil Industry was established by the President of the United States in 1969. Its mandate was to study the oil industry and to recommend ways to ensure the long-term security of the United States' oil supply. The Commission's report, published in 1971, is a landmark document that has shaped the nation's energy policy for decades. It identified the need for a diversified energy portfolio and recommended a range of measures to increase domestic oil production, improve energy efficiency, and develop alternative energy sources. The report also emphasized the importance of international energy cooperation and the need for a stable and secure global oil market. The Commission's findings and recommendations have been widely cited and have influenced the development of numerous energy laws and policies. Its work remains a critical reference point for anyone interested in the future of the oil industry and the nation's energy security.
