

New Mexico Oil Conservation Commission
November 22, 1976

- C. All present producing wells are on one base oil and gas lease with all royalty owners sharing equally from the production.
- D. Apparent dry hole (Service Drilling #1 Pittman) which went through both Dakota and Morrison zones approximately 1/2 mile southeast.
- E. The gas is being sold intra-state to the City of Las Vegas which needs the additional gas this winter as a supplement to their present rather low supply.

The well has yet to be tested by the 4-point method, however, it appears the flow, after stimulation, increased from approximately 250 MCFPD to 1 MMCFDPD.

We respectfully hope the Commission will grant this commingling request as the gas is needed by Las Vegas this winter. Should you need additional information, please inform Brooks Exploration Incorporated in Denver.

Very truly yours,

Bill J. Brooks
President
