Standard Deliverables

The Cover Letter and the Report Cover page are considered integral parts of this Standard Deliverable package. This report is incomplete unless all pages indicated in this Table of Contents are included.

- **Table of Contents**
- **Case Narrative**
- **Executive Summary – Detection Highlights**
- **Methods Summary**
- **Method/Analyst Summary**
- **Sample Summary**
- **Analytical Results**
- **QC Data Association Summary**
- **QC Evaluation and/or Data Reports**
- **Chain-of-Custody**

Case Narrative

Enclosed is the report for nineteen samples that arrived at STL's Denver laboratory on July 28, 2005 at 17:50. The results included in this report have been reviewed for compliance with STL's Laboratory Quality Manual (LQM). The test results shown in this report meet all requirements of NELAC and any exceptions are noted below.

This report may include data with reporting limits (RLs) less than STL's standard reporting limit. These data and reporting limits are being used specifically to meet the needs of this project. Note that, data are not customarily reported to these levels without qualifiers, because they are inherently less reliable and potentially less defensible than the latest industry standards require. Please contact STL for more details.

Dilution factors and footnotes have been provided to assist in the interpretation of the results. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at concentrations above the linear calibration curve, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

STL utilizes USEPA approved methods in all analytical work. The samples presented in this report were analyzed for the parameters listed on the analytical methods summary page in accordance with the methods indicated. A summary of quality control parameters is provided below.

This report shall not be reproduced except in full, without the written approval of the laboratory.

The test results shown in this report meet all requirements of NELAC. Any exceptions are noted below.

Quality Control Summary for Lot D5G290374

Sample Receiving

- The cooler temperatures upon receipt at the Denver laboratory were 5.6°C, 5.0°C, 4.7°C and 4.8°C. All sample containers were received in good condition.
- The chain of custody lists the sample identification as MW-03. However, the bottles are labeled MW-13. The client was notified and confirmed with the laboratory that the sample identification should be MW-13.

Method SW846 8260B – Volatile Organics

- No anomalies were observed.

Method SW846 6010B – Dissolved Metals

- No anomalies were observed.

General Chemistry

- Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at concentrations above the linear calibration curve, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required. Those samples analyzed at a dilution due to high analyte content were flagged "Q".
- Chloride and Total Organic Carbon (TOC) were detected below reporting limits in the associated Method Blanks. No corrective action is required for any compounds detected below reporting limits. The associated data are flagged.
- The percent recoveries for Chloride in the Matrix Spike and Matrix Spike Duplicate samples associated with prep batch 5215504 are estimated due to concentrations exceeding the instrument calibration range. The associated LCS/LCSD samples were within control limits and demonstrate that the operating procedure is in control. No further action was required.
- No other anomalies were observed.

EXECUTIVE SUMMARY - Detection Highlights

NOTE (S) :

- The analytical results of the samples listed above are presented on the following pages.
- All calculations are performed before rounding to avoid round-off errors in calculated results.
- Results noted as "ND" were not detected at or above the stated limit.
- This report must not be reproduced, except in full, without the written approval of the laboratory.
- Results for the following parameters are never reported on a dry weight basis: color, corrosivity, density, flashpoint, ignitability, layers, odor, paint filter test, pH, porosity pressure, reactivity, redox potential, specific gravity, spot tests, solids, solubility, temperature, viscosity, and weight.

NOTE (S) :

RL Reporting Limit

J Method blank contamination. The associated method blank contains the target analyte at a reportable level.

Q Elevated reporting limit. The reporting limit is elevated due to high analyte levels.
