Mr. Leonard Lowe  
Environmental Engineer  
New Mexico Oil Conservation Division  
1220 S. St. Francis Dr.  
Santa Fe, NM 87505

**RE: 1st Semi Annual 2013 Groundwater Monitoring Report**  
**DCP Eldridge Ranch Study Area (AP#-33)**  
**Unit P, Section 21, Township 19 South, Range 37 East**  
**Lea County, New Mexico**

Dear Mr. Lowe:

DCP Midstream, LP (DCP) is pleased to submit for your review, a one copy of the 1st Semi Annual 2013 Results for the DCP Eldridge Study Area located near Monument, New Mexico (Unit P, Section 21, Township 19 South, Range 37 East).

Based on the historical analytical results, DCP would like to make a request to remove NMG MW-9, MW-J and MW-16 from the semiannual groundwater sampling program.

If you have any questions regarding the report, please call at 303-605-1718 or e-mail me [swweathers@dcpmidstream.com](mailto:swweathers@dcpmidstream.com).

Sincerely

**DCP Midstream, LP**

Stephen Weathers, P.G.  
Principal Environmental Specialist

### Tables

- 1 First Half 2013 Semi-Annual Summary of Groundwater Elevation Data
- 2 First Half 2013 Semi-Annual Summary of BTEX Concentrations in Groundwater

### Figures

- 1 Site Location
- 2 Site Map
- 3 First Half 2013 Semi-Annual Groundwater Elevation Contour Map – February 19-21, 2013
- 4 First Half 2013 Semi-Annual Benzene Isoconcentration Map

### Appendices

- A Laboratory Analytical Results
- B Historical Analytical Results

## 1. Introduction

This report summarizes groundwater monitoring and remediation activities conducted during the first half of 2013 at the Eldridge Ranch Pipeline Release (Site) in Lea County, New Mexico (Figure 1). Tasman Geosciences, LLC (Tasman) conducted these activities on behalf of DCP Midstream (DCP). The field activities described herein were performed with the purpose of monitoring groundwater flow and quality conditions, and assessing the presence of light non-aqueous phase liquid (LNAPL) hydrocarbons in the Site subsurface. The data collected were used to develop a groundwater elevation map and benzene isoconcentration map to evaluate current conditions at the Site.

## 2. Site Location and Background

The Site is located in New Mexico Oil Conservation Division (OCD) designated Unit P, Section 21, Township 19 South, Range 37 East, approximately 1 mile north and 3/4 of a mile east of the town of Monument in Lea County, New Mexico. The approximate coordinates are 32.642 degrees north and 103.256 degrees west. The surrounding area is predominantly uninhabited and used for ranching and oil and gas production and gathering. Approximately five underground pipelines traverse the Site (Figure 2).

The Site includes the former Eldridge Ranch property at the south and the former Huston property in the central portion, both of which are owned by DCP. The northern portion of the Site consists of land leased by DCP from the State of New Mexico. The Site spans more than a mile north to south over these three sections. For ease of discussion, the State of New Mexico property will be called the North Area, the Huston property will be called the Central Area, and the Eldridge Property will be called the South Area, as shown on Figure 2.

## 3. Groundwater Monitoring

This section describes the groundwater field and laboratory activities performed during the reporting period. Monitoring activities were conducted on February 19<sup>th</sup> through 21<sup>st</sup>, 2013 and included Site-wide groundwater gauging and sampling. Figure 2 illustrates the groundwater monitoring network utilized to perform these activities at the Site.

### 3.1 Groundwater and LNAPL Elevation Monitoring

Groundwater and LNAPL levels were measured in order to evaluate hydraulic characteristics and provide information regarding seasonal and annual fluctuations in groundwater elevations at the Site. During the first half 2013, groundwater levels were measured at fifty-eight monitoring well locations. LNAPL was detected within monitoring wells MW-26 (0.64-feet), MW-27 (0.57-feet), and MW-CC (0.65-feet)

where the measured thickness in feet is indicated in parenthesis. Groundwater elevation was corrected for product thickness using an assumed LNAPL density of 0.75 grams per cubic centimeter.

Groundwater levels were measured on the north side of the well casing to the nearest 0.01-foot using an oil-water interface probe (IP). Measured groundwater levels are presented in Table 1. Groundwater level data were later converted to elevation (feet above mean sea level [AMSL]).

Groundwater elevation measurements collected during the reporting period as well as historical elevations are presented in Table 1, and a first half 2013 groundwater elevation contour map is provided as Figure 3. Groundwater elevations ranged from 3,587.81 feet AMSL at monitoring well MW-24 to 3,620.04 feet AMSL at monitoring well NMG MW-3. As illustrated on Figure 3, groundwater flow at the Site generally trends to the south/southeast with a gradient of approximately 0.0048 foot per foot between monitoring wells NMG MW-3 (North Area) and MW-24 (South Area).

### 3.2 Groundwater Quality Monitoring

Depth to groundwater, the presence of LNAPL, and total well depth (in wells without LNAPL) were measured within Site monitoring wells prior to collecting groundwater samples. A minimum of three well casing volumes of groundwater (calculated from total depth of the well and groundwater level measurements), were purged from the subject well prior to collecting groundwater samples.

Groundwater samples were collected using dedicated polyethylene bailers, placed in clean laboratory supplied containers for the selected analytical methods, packed in an ice-filled cooler and maintained at approximately four (4) degrees Celsius ( $^{\circ}\text{C}$ ) for transportation. Groundwater samples were then shipped under chain-of-custody procedures to Accutest Laboratories (Accutest) in Wheat Ridge, Colorado, for analysis. Water quality parameters were collected during the February 2013 sampling event. Site monitoring wells did not require collection of more than three purge volumes to achieve parameter stabilization. As such, the analytical data are considered to be representative of Site conditions in that a minimum 3 purge volumes were removed from all sampled monitoring wells during the first half 2013 semi-annual event. Water quality samples were submitted for analysis of benzene, toluene, ethylbenzene, and xylenes (BTEX) by United States Environmental Protection Agency (USEPA) Method 8260B.

Water quality samples were collected from fifty monitoring wells. Monitoring wells MW-26, MW-27, and MW-CC were not sampled due to the presence of LNAPL.

Table 2 summarizes BTEX concentrations in groundwater samples collected during the first half 2013 event. A dissolved-phase benzene isoconcentration map is illustrated on Figure 4. Laboratory analytical reports are included in Appendix A, and the results are summarized below.

- Benzene was detected in twenty-three of the sampled monitoring wells. Detected concentrations ranged from 0.00035 milligrams per liter (mg/L) in MW-I to 14.9 mg/L in MW-N. The New Mexico Water Quality Control Commission (NMWQCC) groundwater standard for

benzene, 0.01 mg/L, was exceeded in monitoring wells MW-11, MW-12, MW-23, MW-M, MW-N, MW-O, MW-Q, MW-EE, MW-LL, NMG MW-7, and NMG MW-10.

- Ethylbenzene was detected in nineteen monitoring wells during the first half 2013 semi-annual sampling event with concentrations ranging from 0.00083 mg/L in MW-MM, to 0.282 mg/L in MW-N. Total xylenes were detected in eleven monitoring wells with concentrations ranging from 0.0022 mg/L in MW-EE, to 0.244 mg/L in MW-4. Concentrations did not exceed the NMWQCC groundwater standard for ethylbenzene (0.75 mg/L) or total xylenes (0.62 mg/L) at any sample location.

Table 2 summarizes BTEX concentrations in groundwater samples collected during the first half 2013 event. Laboratory analytical reports for the event are included in Appendix A, and a dissolved-phase benzene isoconcentration map is illustrated on Figure 4.

### 3.3 Data Quality Assurance / Quality Control

The data were reviewed for compliance with the analytical method and the associated quality assurance/quality control (QA/QC) procedures. All samples were analyzed using the correct analytical methods and within the correct holding times. Chain of custody forms were in order and properly executed and indicate that samples were received at the proper temperature with no headspace. All data were reported using the correct method number and reporting units. A trip blank, matrix spike or matrix spike duplicate (MS/MSD) and three field duplicate samples from wells MW-A, MW-N, and NMG MW-11 were collected during the sampling event. The trip blank was fully in control, having no detections of targets.

Duplicate samples collected at MW-A (DUP A), MW-N (DUP B) and NMG MW-11 (DUP C) were in compliance with QA/QC standards. MW-A and DUP A returned results for benzene of 0.00077 mg/L and 0.00072 mg/L, respectively. MW-N and DUP B returned results for benzene of 14.9 mg/L and 13.0 mg/L, respectively. Benzene concentrations in NMG MW-11 and DUP C were below laboratory detection limits.

The overall QA/QC assessment of the data, based on the data review, indicate that both field precision and overall data precision and accuracy are acceptable.

## 4. Remediation Activities

There were no active remediation activities conducted during the reporting period.

### 4.1 Monitored Natural Attenuation

Natural attenuation remains an effective passive remediation strategy to address the dissolved phase petroleum hydrocarbon plumes on Site. Monitoring wells NMG MW-13, MW-30, MW-31, MW-19, MW-17, and MW-24, which serve as point of compliance wells along the southern and eastern plume

boundaries, continue to exhibit BTEX concentrations below laboratory detection limits in the North, Central, and South areas, respectively. Historic and first half 2013 semi-annual analytical data suggests that natural attenuation continues to provide effective remediation of residual dissolved phase hydrocarbon concentrations on Site.

## 5. Conclusions

Although benzene concentrations exceeded regulatory standards in eleven of the fifty sample locations during the February 2013 monitoring event, BTEX concentrations continue to decrease site-wide. The analytical data from the first half 2013 sampling event concludes the following observations, by area, as described below:

### NORTH AREA

- Eight of the twelve wells in the North Area exhibited constituent concentrations below laboratory detection limits during the first half 2013 semi-annual event.
- Although elevated benzene concentrations persist in NMG MW-7 and NMG MW-10, point of compliance wells located down-gradient continue to return non-detect BTEX results indicating the dissolved phase hydrocarbon plume is not advancing.

### CENTRAL AREA

- Benzene concentrations remain the highest in the Central Area. However, during the first half 2013 event, concentrations decreased by an order of magnitude in two monitoring wells (MW-10 and MW-M). BTEX concentrations in MW-10 are now below NMWQCC groundwater standards.
- Measurable free phase hydrocarbons persist in monitoring wells MW-27 and MW-CC in the central area and MW-26 at the northwest area.
- BTEX concentrations in point of compliance wells MW-19, MW-30, MW-31, and MW-F located east of the plume boundary remain below laboratory detection limits demonstrating there is no lateral movement of the free and dissolved phase petroleum hydrocarbon plumes.

### SOUTH AREA

- During the first half 2013 monitoring event, BTEX concentrations were below NMWQCC regulatory standards at all sample locations in the South Area.
- Constituent concentrations in boundary well MW-24 remain below laboratory detection limits.

## 6. Recommendations

Based on evaluation of first half 2013 and historical Site observations and monitoring results, the following recommendations have been developed for future activities:

- Conduct vacuum enhanced fluid recovery (EFR) to address the presence of LNAPL at wells MW-26, MW-27, and MW-CC during the next semi-annual event.
- Continue semi-annual groundwater monitoring at all monitoring well locations currently on the Site sampling plan, with the exception of those described below.
- Remove monitoring wells MW-J, NMG MW-9, and MW-16 from the Site sampling plan. Dissolved BTEX concentrations have not been detected in MW-J since December 2006, and MW-18 and MW-19 are located downgradient of this well. Dissolved BTEX concentrations have not been detected in NMG MW-9 since the June 2008 sampling event, and NMG MW-11 and NMG MW-13 are located downgradient. Dissolved BTEX concentrations have not been detected in MW-16 since March 2007, and the downgradient location of MW-17 would continue to provide delineation in this localized area.

Average change in groundwater elevation since the previous monitoring event								-0.16

**TABLE 1**  
**FIRST HALF 2013 SEMI-ANNUAL**  
**SUMMARY OF GROUNDWATER ELEVATION DATA**  
**ELDRIDGE PIPELINE RELEASE**  
**LEA COUNTY, NEW MEXICO**

Location	Date	Depth to Groundwater (1) (feet)	Depth to Product (feet)	Free Phase Hydrocarbon Thickness (feet)	Total Depth (2) (feet)	TOC Elevation (feet amsl)	Groundwater Elevation (feet amsl)	Change in Groundwater Elevation Since Previous Event (3) (feet)
----------	------	------------------------------------------	-------------------------------	--------------------------------------------------	------------------------------	------------------------------	-----------------------------------------	-----------------------------------------------------------------------------

Notes:

1- Depths measured from the north edge of the well casing.

2- Total depths were collected and recorded during the first half semi-annual 2013 monitoring event.

3- Changes in groundwater elevation calculated by subtracting the measurement collected during the previous monitoring even from the measurement collected during the most recent monitoring event.

4- MW-17 was not measured due to a biological growth obstruction at 15.47 bgs.

Data presented for all well locations includes previous four sampling events, when available. Historic groundwater analytical results for these locations may be found in Appendix B.

\* Groundwater elevation was corrected for product thickness using the following calculation:

Groundwater elevation = (TOC Elevation - Measured Depth to Water) + (LNAPL Thickness in Well \* LNAPL Density)

LNAPL density was assumed to be approximately 0.75 grams per cubic centimeter

Notes:

The environmental cleanup standards for water that are applicable to the site are the New Mexico Water Quality Control Commission (NMWQCC) Groundwater Standards.

Data presented for all well locations includes previous four sampling events, when available. Historic groundwater analytical results for these locations may be found in Appendix B.

MW-17 was not sampled due to a biological growth obstruction.

During the first half 2013 monitoring period, the following wells were reported with dissimilar names in the analytical report, as shown in parentheses: MW-8 (NMG-8), MW-14 (NMG MW-14), NMG MW-2 (NMG 2), NMG MW-3 (NMG 3), and NMG MW-7 (NMG 7).

**Bold red** values indicate an exceedance of the NMWQCC groundwater standards for the Site.

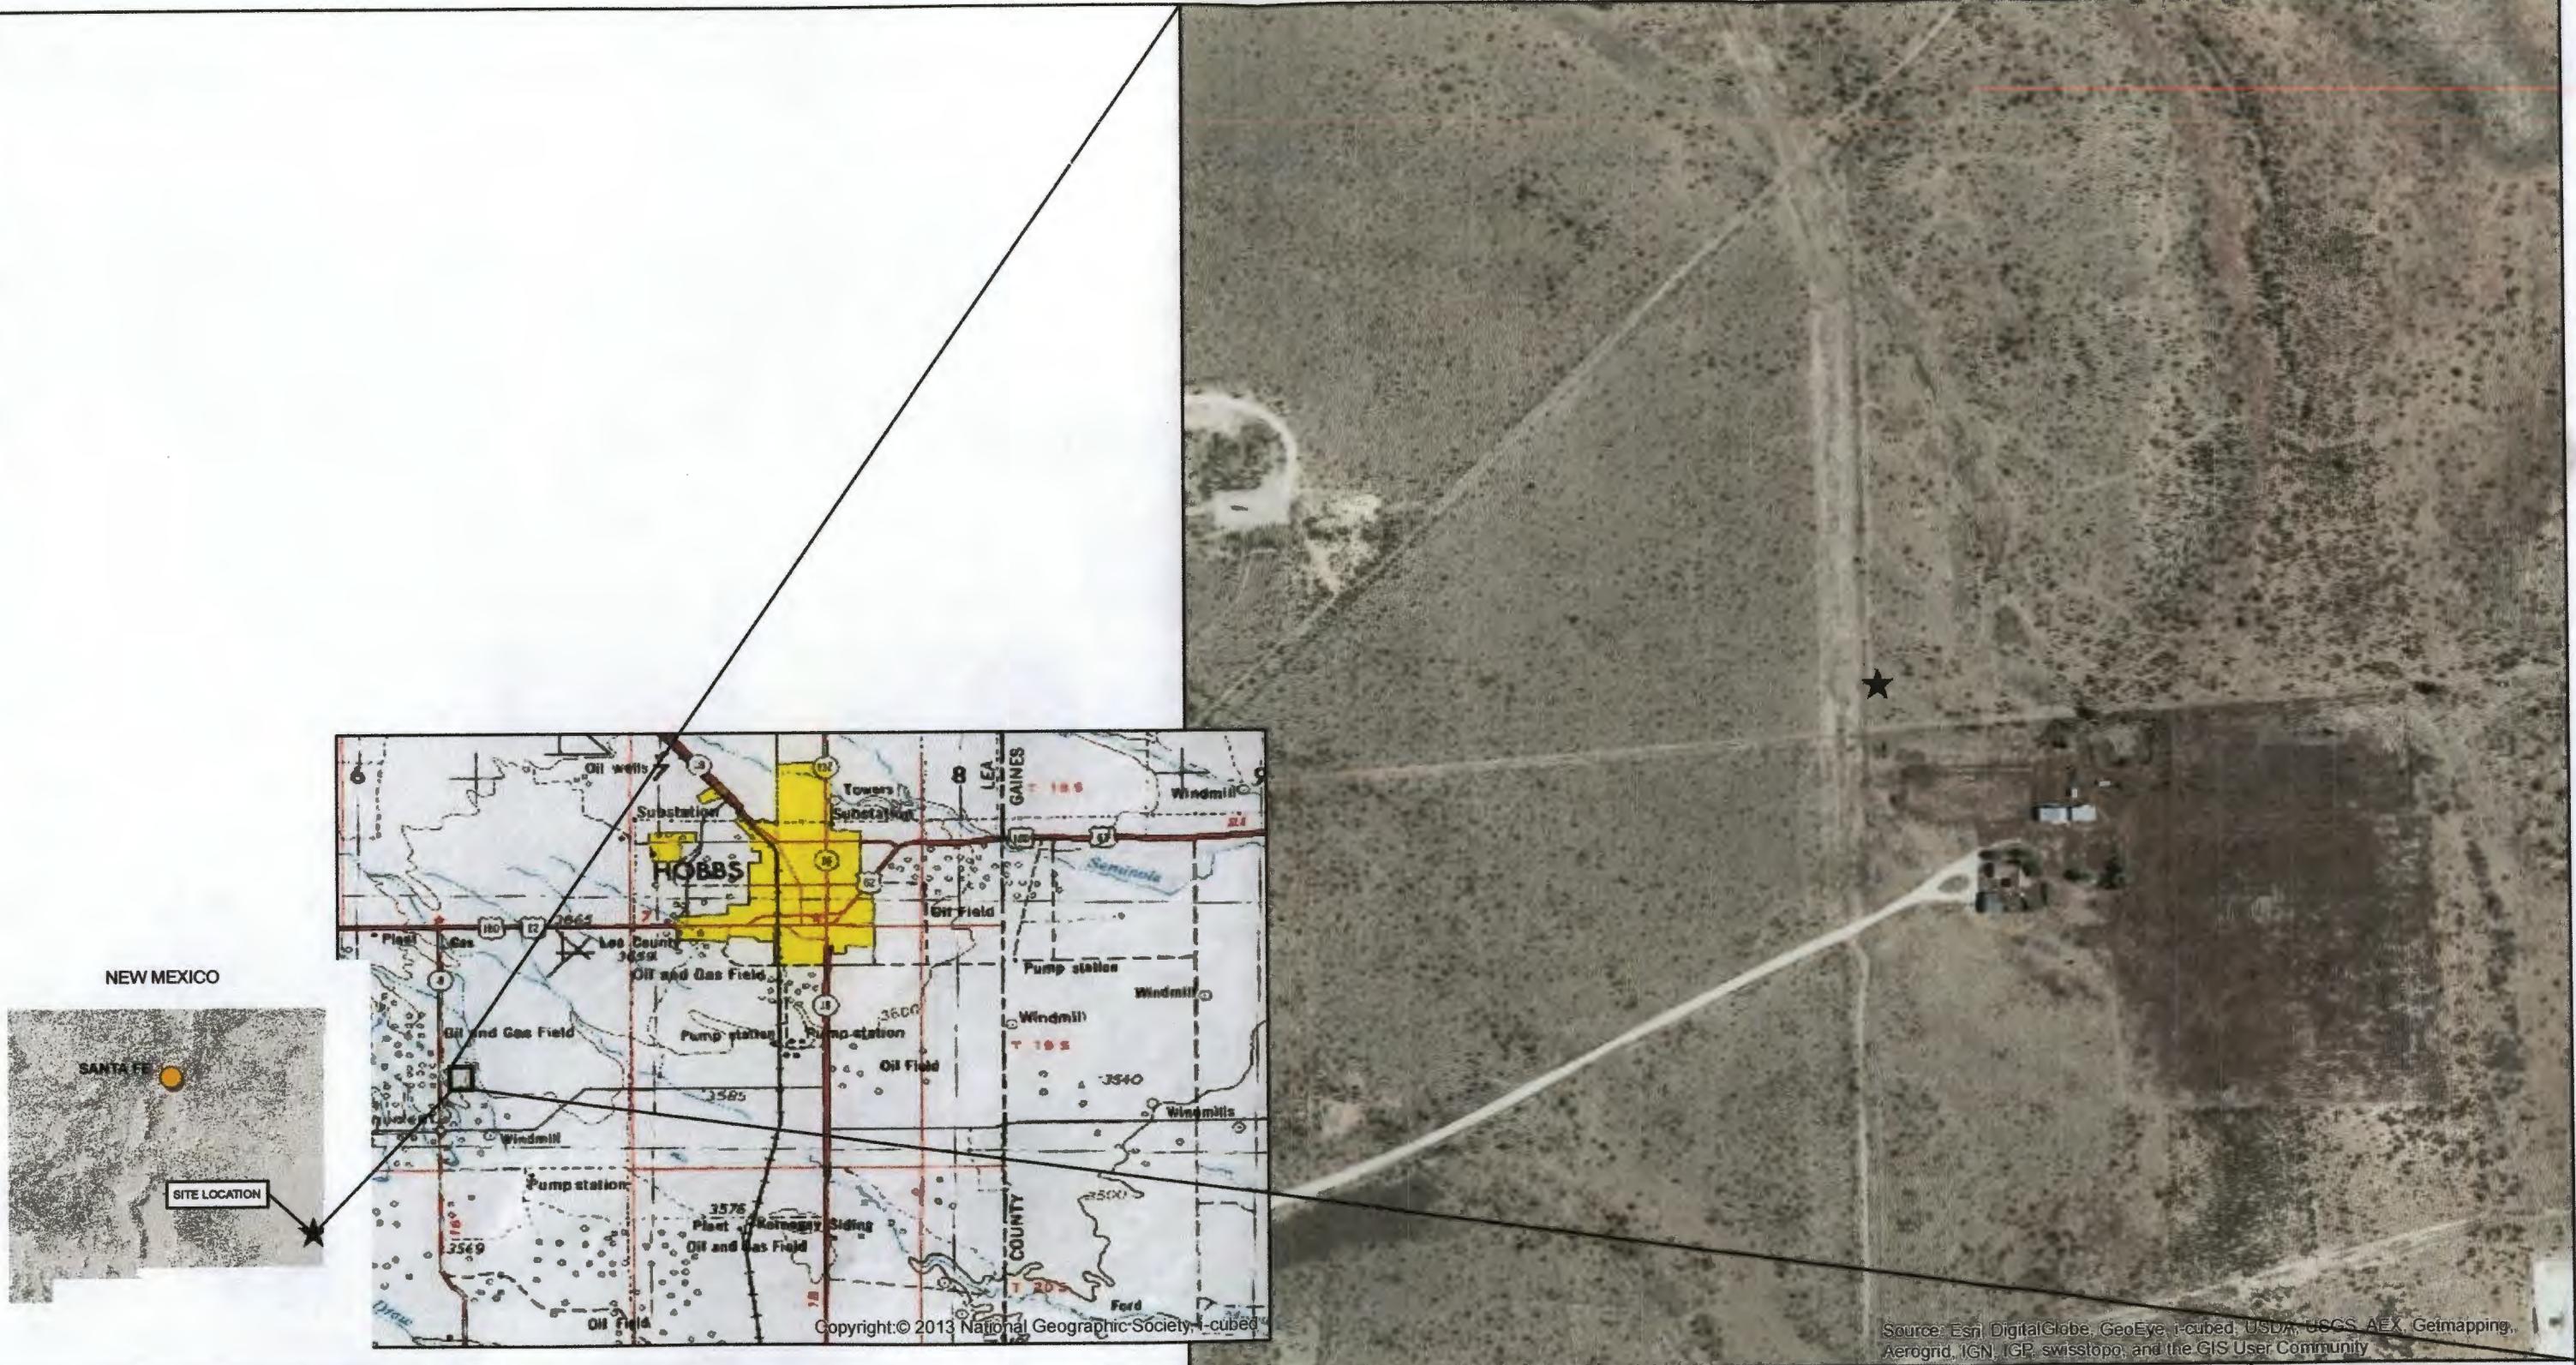

Sample locations are shown on Figure 2 and analytical results are illustrated on Figure 4.

LNAPL = Light Non-Aqueous Phase Liquid

NS = Not Sampled.

mg/L = milligrams per liter.

## CASE NARRATIVE / CONFORMANCE SUMMARY

**Client:** DCP Midstream, LP

**Job No** D43742

**Site:** TASMCOA:Elbridge

**Report Date** 3/4/2013 8:14:40 AM

On 02/23/2013, 53 sample(s), 1 Trip Blank(s), and 0 Field Blank(s) were received at Accutest Mountain States (AMS) at a temperature of 3 °C. The samples were intact and properly preserved, unless noted below. An AMS Job Number of D43742 was assigned to the project. The lab sample ID, client sample ID, and date of sample collection are detailed in the report's Results Summary.

Specified quality control criteria were achieved for this job except as noted below. For more information, please refer to the analytical results and QC summary pages.

### Volatiles by GCMS By Method SW846 8260B

<b>Matrix</b> AQ	<b>Batch ID:</b> V3V1364
------------------	--------------------------

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) D43742-31MS, D43742-31MSD were used as the QC samples indicated.
- The matrix spike (MS) recovery(s) of Benzene are outside control limits. Outside control limits due to high level in sample relative to spike amount.

<b>Matrix</b> AQ	<b>Batch ID:</b> V3V1368
------------------	--------------------------

- All samples were analyzed within the recommended method holding time.
- Sample(s) D43742-34MS, D43742-34MSD were used as the QC samples indicated.
- All method blanks for this batch meet method specific criteria.

<b>Matrix</b> AQ	<b>Batch ID:</b> V6V994
------------------	-------------------------

- All samples were analyzed within the recommended method holding time.
- Sample(s) D43742-35MS, D43742-35MSD were used as the QC samples indicated.
- All method blanks for this batch meet method specific criteria.

<b>Matrix</b> AQ	<b>Batch ID:</b> V6V995
------------------	-------------------------

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) D43745-7MS, D43745-7MSD were used as the QC samples indicated.

<b>Matrix</b> AQ	<b>Batch ID:</b> V7V1017
------------------	--------------------------

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) D43742-18MS, D43742-18MSD were used as the QC samples indicated.
- D43742-20: The pH of the sample aliquot for VOA analysis was >2 at time of analysis.
- D43742-24: The pH of the sample aliquot for VOA analysis was >2 at time of analysis.

<b>Matrix</b> AQ	<b>Batch ID:</b> V7V1018
------------------	--------------------------

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) D43742-19MS, D43742-19MSD were used as the QC samples indicated.

<b>Matrix</b> AQ	<b>Batch ID:</b> V7V1019
------------------	--------------------------

- All samples were analyzed within the recommended method holding time.

**Volatiles by GCMS By Method SW846 8260B****Matrix** AQ**Batch ID:** V7V1019

- Sample(s) D43743-10MS, D43743-10MSD were used as the QC samples indicated.
- All method blanks for this batch meet method specific criteria.
- D43742-53: The pH of the sample aliquot for VOA analysis was >2 at time of analysis.
- D43742-51: The pH of the sample aliquot for VOA analysis was >2 at time of analysis.

**Matrix** AQ**Batch ID:** V7V1021

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) D43746-6MS, D43746-6MSD were used as the QC samples indicated.

AMS certifies that data reported for samples received, listed on the associated custody chain or analytical task order, were produced to specifications meeting AMS's Quality System precision, accuracy and completeness objectives except as noted.

Estimated non-standard method measurement uncertainty data is available on request, based on quality control bias and implicit for standard methods. Acceptable uncertainty requires tested parameter quality control data to meet method criteria.

AMS is not responsible for data quality assumptions if partial reports are used and recommends that this report be used in its entirety. This report is authorized by AMS indicated via signature on the report cover.

Notes:  
The environmental cleanup standards for water that are applicable to the site are the New Mexico Water Quality Control Commission (NMWQCC) Groundwater Standards.

**Bold** red values indicate an exceedance of the NMWQCC groundwater standards for the Site.

Sample locations are shown on Figure 2 and analytical results are illustrated on Figure 4.

LNAPL = Light Non-Aqueous Phase Liquid

NS = Not Sampled.

mg/L = milligrams per liter.

B - indicates analyte found in associated method blank
