Subject: Pit Closure and Surface Restoration
NMSLO BL-0988

Dear Mr. Griswold:

Please find enclosed a closure report for the above referenced facility. Please note, the brine well operations have been shut down and the well has been properly plugged and abandoned pursuant to the New Mexico Oil Conservation Division.

This closure request is for the on-site lined brine pit and for all surface equipment and any associated contaminated soil. The site pit has been excavated to a depth of approximately 12 feet below surface in order to remove the liner, leak detection system and contamination associated with the pit.

In addition, all site surface features such as concrete pads and driveways, valves, piping, sumps, electrical equipment, utility poles, underground water lines, loading stations, pump house and controls, chain link fence, and major surface contamination has been removed.

The New Mexico State Land Office in which Key Energy has a Business lease BL-0988 owns the site property and has requested and approved the site to be returned as commercial property status and requires no re-vegetation.

The site has three groundwater monitoring devices that will be closed upon OCD approval, as the report demonstrates that Key Energy's past activities did not impacted groundwater.

Sincerely Yours,

Wayne Price-Price LLC
Key Energy Agent-Consultant NM

History and Overview:

This well was originally drilled and completed as an Oil well by Continental Oil Company in 1949 and subsequently plugged and abandoned in 1971. The well was re-entered in 1980 by Truckers Water Company and converted in a Brine Well and permitted by the NM Oil Conservation Division under permit BW-18. In 2007, this well was properly plugged and abandoned by Key Energy Services LLC in 2007.

The site contained the well bore, fresh and brine water station, fresh water supplied by the City of Hobbs, NM, a 10,000 bbl lined brine storage pit that was designed with an integral leak detection system. There was a sump and loading concrete pads, water pump house and miscellaneous valves, piping, and electrical service.

The site has been razed and all sumps and pits have been closed. Once approved by OCD the site will be turned back over to the New Mexico State Land Office (NMSLO) who is the owner of the property.

Site Chronology of Environmental Investigations:

A comprehensive review was conducted which included a review of the Oil Conservation Division's (OCD) public environmental permit and well records including Key Energy's internal records. The following is a synopsis of the review:

Well Records:

The well operated for 27 years virtually problem free, notwithstanding the usual down-hole issues experienced by brine wells. OCD witnessed several scheduled Internal and external mechanical integrity tests to ensure the protection of groundwater with no test failures noted.

There was one occasion during a routine work-over, where the casing test pressure bleed-off more than 10%, but this occurred because of a deep down-hole problem well below the water table. The well was shutdown in 2007 after a normal "End of Life" scenario and was properly plugged and abandoned pursuant to OCD specific requirements.

Site Environmental Investigations and Restorations:

The brine well and water station were operated many years with very few noted environmental problems. The operations included brine well, pump station, large brine storage pond that was lined with a leak detection system, an integral concrete loading sump and driveway. As part of the OCD permit conditions, the site was routinely inspected by the OCD.

The 10,000 bbl brine storage pond was installed with a leak detection system that was visually checked on a routine basis. There was no documentation of any significant leakage observed

during the life of the permit. The leak detection contained a small one-gallon sump, which normally remained dry, except during periods of intense rainfall.

In 2003, the OCD required a down-gradient monitor well as part of the new permit conditions. In addition, permit conditions required inspections of the concrete loading pad and sump. It was noted the concrete pad and sump were beginning to deteriorate due to the salt effect of the concentrated brine water.

As a result, Key Energy performed a sump water level test and the results indicated a possible leak. OCD requested Key Energy to perform an investigation to determine the extent of the salt contamination and to repair the loading pad and sump.

The results of the investigation (*Arcadis-5/20/03 report OCD file*) revealed very surfical salt contamination decreasing to background levels at a relative shallow depth, well above the water table. A down-gradient monitor well (MW-1) was installed per the permit conditions and the collected soil boring samples revealed the same pattern.

The monitor well was drilled 200 feet deep and tagged into the underlying "Red Bed". The well was screened the entire length of the saturated zone and top of the saturated zone encountered at about 55 feet below ground level. Over 80 bbl's of water had to be pumped from the well in order to obtain a stabilized reading. The water was tested for chlorides and recorded to be 665 ppm. The report did not reveal how deep the pump was set.

Comment: Please find enclosed in Appendix "A"; a copy of the site plan, which shows the locations of the soil borings, and monitor well. Also included is the analytical summary Table "B" which demonstrates the chloride migration stopped well before the groundwater was encountered as shown in the monitor well (MW-1) log which is included for reference and the analytical summary Table "C" for the groundwater. (Arcadis-5/20/03 report OCD file). These contaminated soils were removed in the final pit closure project addressed below.

Key Energy set-up a temporary loading station on the west side of the brine pond in order to facilitate the repair of the concrete loading pad and sump.

In March of 2004, OCD required Key Energy to submit a site groundwater investigation plan and pad/sump repair results. Key Energy submitted the results of the required investigation (*see Brown-Caldwell report-OCD file dated Aug 22, 2004).*

An up-gradient monitor well (MW-2) was installed in the far northwest corner of the site. The well was drilled approximately 75 feet deep with the water level measured at 64 feet below top of casing. The well was purged and sampled for Constituents of Concern (i.e. Chlorides). The sampled showed chlorides to be 527 ppm. Existing MW-1 (original down-gradient well) was also sampled at the 70 feet level, as was MW-1, and showed chlorides to be 327 ppm. In addition, MW-1 was also sampled at the 95 feet level and revealed chlorides of 476 ppm. These results indicated that the underlying groundwater has a stratified chloride plume and the up-gradient well is showing higher chlorides than down-gradient.

Comment: Please find enclosed in Appendix "B"; a copy of Figure 2 which shows the monitor wells MW-1 and MW-2 locations, Table 1 Groundwater Analytical Results and the MW-2 Well Log selected from the Brown-Caldwell report-OCD file dated Aug 22, 2004.

As will be demonstrated in the pit closure report, there are noted up-gradient sources that have most likely caused the underlying groundwater to exceeded the state's groundwater standard for chlorides.

The *Brown-Caldwell* report reflects that another soil boring, located just south of the loading pad was installed to reconfirm the results of the *Arcadis report, that no hydrocarbons were found that exceeded any OCD guidance.*

In September 2004, the OCD District Office reported spillage from the temporary loading station just adjacent and west of the brine pond. As a result of that inspection, OCD required Key Energy to investigate this area. Key Energy submitted the results of the required investigation. (*see E-Teck Environmental Safety & Solutions report dated Nov-2004 in OCD file).*

The results reflected that soil chlorides were elevated from surface to about 5 feet deep, and then had a decreasing trend down to 250-ppm chlorides, in the 20-foot depth profile.

Comment: Appendix "C" shows the site map and boring locations, and Table 1 includes the laboratory analysis for chlorides.

Key Energy performed a clean up (*see Terracon Oct 31, 2005 report in OCD files*) by excavating contaminated soils down to a 3000 ppm chloride level, approved by OCD, and disposing of approximately 700 yards of salt contaminated soils at the OCD permitted Sundance Services landfill. The temporary unloading area was then retrofitted with a compacted clay liner and covered with caliche. Key Energy also repaired the concrete loading pad/ sump and returned it to service.

Comment: Appendix "D" of this document shows the Figure 2 Site Plan, Table 1 Concentration of Chloride in Soil and photos of activity.

Key Energy plugged and abandoned the well in April of 2007.

In Feb-2010 OCD issue a LOV Inspection report to Key Energy indicating that well has been P&A and site requires equipment removal, and closing of the Sump and Brine Pit.

On June 22, 2010 Key Energy begin removing the un-salable brine water and began cleaning out the brine pit and sump. 1,920 bbl's of fluids were hauled to Mesquite SWD F-29 and the Crazy Horse SWD for disposal, which was approved by Carl Chavez on June 06, 2010. *(E-mail OCD file). Appendix "E" contains a copy of the waste manifest.*

Sometime between June 23-29, 2010 the solidified salt, sand and debris were removed from the pit and hauled to Sundance Services Inc. (Parabo Eunice NM) an OCD permitted facility. Approximately 3,168 yards were manifested and copies are included *in Appendix "E".*

Starting on July 06, 2010, Key Energy contracted with the NOVA company to begin excavating and removing the brine pit berms, liner, leak detection system and the loading concrete sump. Approximately 846 yards of solid material including salt contaminated soils were disposed of at the Sundance Services Inc. facility. (Copies of the Waste Manifest are included in *Appendix "E").* Key Energy's Environmental Specialist, Louis Sanchez, and Geoff Leaking OCD's Hobbs representative were in contact during this phase of the project. (see Key Energy's field notebook NM-13036).

Comment: Appendix "E" of this document contains the disposal manifests for the liquid and solid material removed from the pit, including the concrete sump and some contaminated soils in the loading area.

In addition, approximately 5000 yards of additional soils were removed from the site yard areas, pit bottom and sides walls. These soils were stocked-piled into four large piles on-site. Preliminary sampling under the pit liner revealed traces of chlorides greater than 500 ppm.

An OCD C-141 release form and OCD C-144 Sump (BGT) form was filed in Sept-2010. (*Reference OCD Well File*) This document contained a statement that a C-144 pit closure form will be sent to OCD Santa Fe-Brad Jones. Key Energy has a copy of this certified letter and report but for some reason this documentation could not be found in the OCD on-line records.

November 04, 2010 Key Energy (Sanchez) E-mailed a delineation work plan for approval to Hobbs OCD office. (Leaking). *See Key Energy-Sanchez field notebook NM-13036 found in Appendix "F".*

May 05, 2011 OCD Hobbs office (Leaking) approves delineation work plan with condition that the results must be submitted before closure work starts. *Reference Key Energy-Sanchez field notebook NM-13036 found in Appendix "F".*

June 22, 2011, Key Energy-Terracon completes site delineation study.

Comment: Please find enclosed in Appendix "G" of this document a complete copy of the Terracon Limited Site Investigation Report A4117046 Dated June 22, 2011. This investigation consisted of installing four temporary monitoring wells with one well (MW-3) being converted to a permanent well.

To streamline the review process, the first three pages of Appendix "G" consists of the groundwater gradient map (Annotated Fig. 3), the soil chloride concentrations measured from top to bottom as found in the borings (Table 1), and the groundwater concentrations of chlorides (Table 2) as found in the existing MW-1 (down-gradient well), MW-2 (up-gradient well), MW-3 (the new well), and the three Temporary Boring/Wells TMW-1, TMW-2 and TMW-3. Special note: TMW-3, which was very close to the original MW-1 had an anomaly high number and has been discounted.

Key Energy recommends OCD place a lot of emphasis on this report as it basically shows that concentrations of all soil chlorides diminished to background levels well before encountering water.

It also shows that the Up-gradient well (MW-2), continued to exhibit an off-site source of the underlying groundwater contamination.

Aug 26, 2011, OCD (Jim Griswold) notifies Key Energy-Price LLC that groundwater investigation and closure activities will be handled by Santa Fe since this is a WQCC UIC permitted facility.

Sept 2011, OCD began the hearing process to amend pit rule. Pit closures were placed on hold until final outcome of rule. (Tele Conf with Griswold-OCD)

March 10, 2013, Key Energy-Price LLC collected composite sidewall soil pile samples.

June 2013, Key Energy-Price LLC met with the NM State Land Office (SLO), representative Bill Sonnamaker, on site and collected top composite samples from soil piles, pit trenches (bottom-hole), pit sidewalls, blow-sand pile west side, composite between loading pad and pit, and composite of entire remaining pad.

June 28, 2013, New Pit Rule went into effect.

July 17, 2013, Key Energy-Price LLC sampled NW trench rainwater, and the accumulated blow-sand for RCRA /Total hazardous waste constituents.

July 23, 2013, Key Energy-Price LLC submitted request to OCD (Griswold) to haul off the highly contaminated soils to Gandy-Marley landfill, and install a red bed clay compacted liner.

July 24, 2013, OCD approves Key Energy's earthmoving plans.

Aug 26-27, 2013, Key Energy-Price LLC ran a "Norm" survey for entire site and ran a SPLP test on the blow sand.

Sept 10, 2013, Site restoration started and OCD-Griswold was on-site to witness.

Sept 11, 2013, OCD (Jim Griswold) issued closure conditions.

Sept 11, 2013, Key Energy-Price LLC collected composite center of soil piles.

Sept 20, 2013, Key Energy-Price LLC sampled dirt piles, around and under pads and collected groundwater samples from the three monitoring wells, MW-1, 2 & 3.

Sept 27, 2013, Price LLC sampled on-site mix piles.

Summary of Final Site Closure Activities:

On September 10, 2013, Key Energy utilizing in house equipment and operators, and contracting the Gandy Corp. trucking services, began to remove several hundred yards of the most heavily contaminated soil from the site and dispose of at the Gandy-Marley OCD permitted landfill. Approximately 680 yards of Triassic Red Bed Clay was brought back in order to build an infiltration barrier in the bottom and on the sidewalls of the pit. Waste manifest generated during this phase of the project is shown *Appendix "I".*

As previously noted, four large soil piles were originally generated during the July 2010 activities by removing contaminated soils from the pit area, loading area and yard in general. The soil piles were identified as follows; Middle (adjacent just north of pit), the West pile, the Northwest pile and the Northeast pile. There was an additional pile called the "Sand Pile", which was located on the far west N-S boundary line.

The sand pile was mostly naturally occurring wind blown sand, however some waste sand generated from a sandblasting company (R&R Service), located west of the site, were noted to have co-mingled with the sand pile. This pile consisted of approximately 500-600 yards of material.

The New Mexico State Land Office requested Key Energy remove the pile or re-cycle it. OCD was notified and permission granted to re-use on-site if proper tests were conducted. Key Energy collected several representative samples from the sand pile and ran extensive test to ensure the sand was safe for re-cycling on-site.

Appendix "J" of this document contains the sand pile test results, which indicted the sand to be RCRA Non-Hazardous, and a SPLP test was ran to make sure the sand would not leach any WQCC constituents of concern.

The soil piles were tested on site using a Hach Field test Kit for Chlorides, and a PID to screen for volatile organics. There was no visual hydrocarbon contamination found and all PID reading were "ND". OCD had requested that Key Energy sample the sidewalls, top and middle of each pile to determine the average composite chlorides.

The middle soil pile had the highest reading, ranging from 9,004 ppm to 19,739 ppm chlorides with an average of 14,370 ppm chlorides. The west soil pile ranged from 208 ppm to 600 ppm chlorides with an averaged of 429 ppm chlorides. The northwest soil pile ranged from 80 ppm to 1,206 ppm chlorides with an average of 520 ppm chlorides. The northeast soil pile ranged from 346 ppm to 3,382 with an average of 1,426 ppm chlorides.

The top part of the northeast soil pile was removed and combined with the middle pile for disposal. The sand pile was virtually chloride free.

The pit composite sidewall, bottom and trenches were sampled. Five trenches had been dug approximately 5 feet deep below the bottom of the pit, or 17 ft below surface level (BSL).

The pit composite bottom (12 ft BSL) was recorded at 4728 ppm and 5524 ppm for an average of 5,126 ppm chlorides.

The pit trench bottom (17 ft BSL) chloride sample results were as follows; northwest trench 1,000 ppm, northeast trench 1,576 ppm, southwest trench 1,740 ppm, southeast trench 1,658, and the middle trench was 1,136 ppm chlorides.

The sidewall surface composite (2 ft BSL) sample result was recorded at 27,000 ppm. This reading was out of the statistical range of the other samples. It is believed that the north sidewall was being influenced by the adjacent middle soil pile, which was the "Hottest" of all of the soil piles.

The sidewalls were re-sampled individually at 3 ft (BSL) by digging down approximately one foot below the sidewall surface and the following results were recorded; north wall was 14,000 ppm chlorides; the east wall was 900 ppm chlorides; the south wall was 2,700 ppm chlorides and the west wall was 2828 ppm chlorides. A larger composite of the entire north wall was collected and the results were much lower with a reading of 3000 ppm chlorides, which was in line with the other sidewalls.

The north yard area, which included the pump house, well and soil piles, were tested and the composite for this area was recorded at 5,524 ppm chlorides. It's Key Energy's opinion this sample reflected only surficial surface contamination generated by the earth moving activities.

The loading pad (south yard) area was tested by grabbing several samples around the pad area and between the pad and pit area for a composite. The results revealed chlorides of 11,696 ppm. This correlated to previous reports confirming shallow soils in this area were impacted by past operations.

In addition, the entire site was surveyed using a "Norm" screening device, a Ludlem radiation detector. All readings were consistently within the normal background range for the area.

The chloride and "NORM" survey results for the different soil piles, pit and yard samples were tabulated and are shown in *Appendix "H"* of this document, along with sampling photos, raw field notes and data collected.

The pit sidewalls were scraped and approximately one foot was pushed out of the pit and co-mingled with the middle soil pile for disposal. The sidewalls were not re-sampled after this excavation as a previous proximity boring TMW-1 showed decreasing chloride trends.

A 6" inch clay liner was constructed over the entire pit, including sidewalls. The liner was placed a minimum of one foot above where the existing brine pond liner was located. The liner was properly watered and compacted. A certified compaction test was conducted by Pettigrew & Associates, of Hobbs, NM and is included in *Appendix "K".*

The first pit fill (1st lift), consisted of the loading pad area soils blended in order to meet the OCD requirement of 2500 ppm chlorides. In addition, the concrete from the loading pad and the pump house pad were broken up and placed in the first lift, as approved by OCD.

The lifts were installed in three-foot increments and compacted. A composite sample of each lift was collected and tested at Cardinal Labs, Located in Hobbs, NM. The results of the lifts were as follows: Lift #1 was 464 mg/kg of Chlorides; Lift #2 was 464 mg/kg of Chlorides; Lift #3 was 720 mg/kg; and Lift # 4 was 400 mg/kg. The average of the four lifts were 512 mg/kg. A copy of the Laboratory results can be found in *Appendix "L".*

All shallow soils that exceeded 600 ppm were either removed and disposed of, or were blended to meet the 600 ppm criteria set by OCD-Griswold. Previous investigations revealed that deeper soils trended to approach background levels.

Key Energy completed the site closure of the brine pit and all surface restoration on November 01, 2013. The site was left bladed and leveled for commercial operations as requested by the NMSLO.

The major source (i.e. mass of salt) of all on-site contamination has been removed from the pit, loading, sump and yard areas and was disposed of off-site at an OCD permitted landfill. A compacted clay liner was installed over any remaining contamination to retard or prevent future infiltration for the protection of the underlying groundwater.

Appendix "M" contains selected work photos taken during the project.

Appendix "N" contains pertinent correspondence and OCD approvals and submitted OCD forms.

Groundwater Summary:

The permit requirement to install a down-gradient monitor well apparently triggered a *"False Positive"* that groundwater was impacted by the facility operations. After several investigations and additional monitor wells installed, the evidence clearly demonstrates there is an up-gradient off-site source of contamination.

Key Energy-Price LLC noted that an open unlined pit had been in operation for a number of years just 30-50 feet from the site's up-gradient monitoring well MW-2. In addition, the area is an old oil and gas field where hundreds of old pits were located, not withstanding an extremely large unlined produced water disposal facility, located directly 1000 feet up-gradient to the Key Energy site.

This facility was most likely closed after the R-3221 original "Pit Order" for southeast NM was enacted. West Hobbs has been an area of concern for many years due to past oil and gas practices. Groundwater in this area has been impaired for many years and will be so for quite a while.

Please find in *Appendix "O"* photos showing the pit located just adjacent to Key Energy's up-gradient MW-2.

This pit was originally operated by an oil and gas service trucking company and then by R&R Service, a sandblast and painting company. OCD required the company to obtain a discharge permit in October of 2000 and subsequently close the pit.

Records could not be located for the 1964 large open lagoon disposal pits and ponds located about 1000 feet to the northwest of the site, but aerial photos provide a good demonstration of the size and extent of these operations. While the R-3221 Order required closure of these facilities, no groundwater investigations were required of the operator at the time.

Please find in *Appendix "O"* the aerial photos of the old disposal facility.

Below is a histogram of the chlorides in the on-site monitoring wells.

Key Energy BW-18 MW Histogram

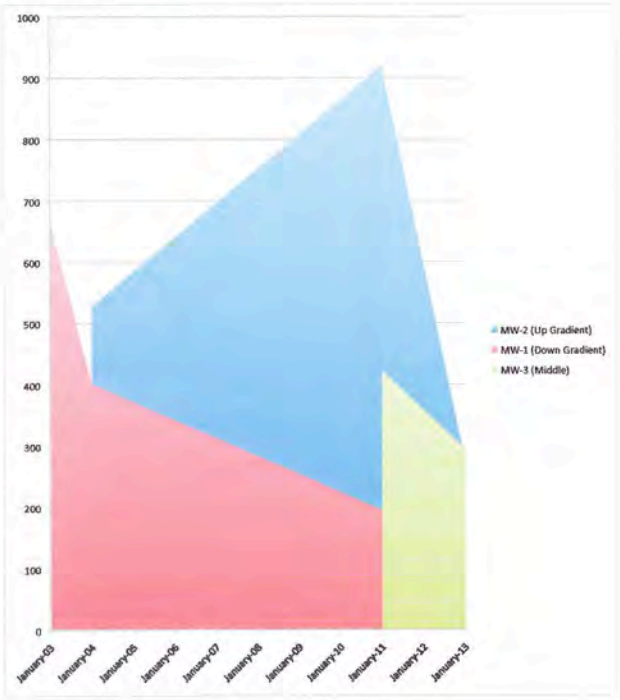
Date	MW-2 (Up Gradient)	MW-1 (Down Gradient)	MW-3 (Middle)
March-03		665	
August-04	527	401	
June-11	919	194	422
September-13	273	217	294

Mar 2003 MW-1 was completed in the entire saturated zone over 200ft. This original reading was taken afer a 80 bbl purge.

Aug 2004 MW-1 reading is averaged from 70ft & 95 ft at 70 ft = 327 Cl ppm 95 ft = 476 Cl ppm.
MW-2 was collected at 70 ft level.
Both MW-1 & 2 wells received the same amount of purge.

June 2011 MW-1-2-3 were purged 5-8 gallons

Sept 2013-MW 1-2-3 were sampled with no purge and measured with Hach field test kit.



The above graph is somewhat obtuse, but basically demonstrates that the up-gradient (Blue Area) dominates the chart. Recognizing the fact the data is limited in quantity, it is however over a 10 year span.

From the above graph and referencing the investigation documents found in the OCD files, it appears that the more MW-1 (down-gradient well) was purged, the higher the reading in chlorides became. The same methodology and reasoning may be applied to MW-2 (up-gradient well), but to a lesser extent since it was only completed near the top of the water table.

It does appear there is a historic groundwater plume of chlorides under the entire site area and is slowly diminishing over time. It is also apparent this plume has become stratified over many years and the density gradient has taken it to, or near the bottom of the aquifer.

As writer of this document (Wayne Price) of Price LLC, my experience living in the area and performing hundreds of investigations while employed at the OCD, this type of occurrence is quite prevalent in the area. Eventually, "Natural Attenuation" i.e. dilution and movement away

from the area over time, has shown to correct the problem and these type of plumes have become manageable.

The underlying base formation is know to have "Red Bed" clay lows or sinks, where plumes will eventually settle out and not move any further. Several water well drillers have discovered these areas and will advise their clients to place the suction of the water wells above these points in order to obtain good water.

Trying to remediate such plumes, is and will be virtually impossible from any common sense cost benefit analysis standpoint. Some approved procedures have been to pump out and dispose of this water in order to reduce the salt content. This is beneficial only when the plume is addressed early in its spill life, otherwise it is a waste of valuable water that can be treated for future use.

In closing, all the evidence to date, clearly shows that Key Energy's operations did not contaminate the underlying groundwater and Key Energy respectfully request closure of the site including closing the three monitor wells.

L. Sanchez 7/6/16 Pg. 1 of 2

1000 MM	Arrive on location. Dozer already removing to 2' from the bank of the excavation. Loader stockpiling soil. Pics of the site upon arrival.
1023	NOVA has two operators and the supervisor James Conroy. There does not appear to be a second liner. Dozer is hitting a hard rock formation. Told James to take it down 2' below the leak detection pipes. The pipes are perforated.
1055	Contacted Geoff Leking (NMOCD) to get approval to fill the cement sump with clean fill then cement the top 12 to 16". He was going to call to get approval then call me back.
1138	Leave site for lunch and to pick up supplies.
1321	Arrive back onsite. Dozer still moving material on to pit. Pics.
1532	NOVA will not be ready to sample until the morning. Pictures of the pit prior to leaving site.

L. Sanchez 7/6/16 Pg. 2 of 2

1535	After removing the pipe from the leak detection system the layout appears to be as follows: 1547	Leave site for Midland. Still have not heard back from Geoff Leking. Will return in am to sample.

END

7/7/10

L. Sanchez
PS 1.of

0911 MST | Arrive on location after picking up more sampling materials at Xcel. Dozer and loader finishing the removal of the last material down 2' from previous sample. James Cornely, NOVA site super, onsite. Review of conditions on arrival.

0941 | Dozer finishing removing material from pit. Prepare to sample. Sampling Nomenclature:

@ 2' below previous sample:
Composite: PC-02
Grabs:
NW corner: NW-02
NE corner: NE-02
SW corner: SW-02
SE corner: SE-02
Center: C-02

@ 4' below previous sample:
PC-03
NW-03
NE-03
SW-03
SE-03
C-03

7/7/10

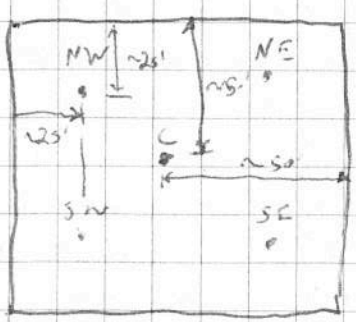
PS 2.of

0941 cont | @ 6' below previous sample:
PC-04
NW-04
NE-04
SW-04
SE-04
C-04

1006 | Prepare to collect final soil sample. The TD of the pit currently is ~12'. First grab sample (*-02) will be collected at this depth.



Did not have excavator, what is the sampling location, were placed at.

Base of the pit is a hard sandy clay, very compacted. Minor sand seams. Bucket is having issues digging. TD of pit is 12' approximately.

7/7/10 cont't — L. Sanchez pg 3 of

1012	Collect grab sample NE-02 and start composite PC-02. ~~Sandy~~ Clayey Sand (Rocky).
1020	Collect grab sample SE-02. More PC-02 Clayey sand (Rocky)
1030	Collect grab sample C-02 and more PC-02 Clayey sand.
1034	Collect grab sample SW-02 and more PC-02 Clayey Sand (Rocky)
1039	Collect grab sample NW-02 and more PC-02 Clayey Sand (Rocky)
1044	Excavated down an additional 2' from the 12' TD to collect grab sample NE-03 and start composite PC-03. All samples from this point on will be held at the lab and only run if needed. The materials excavated are a heavily packed clayey sand almost rock like. Trackhoe bucket has difficulty digging.
1052	Collect grab SE-03 & more PC-03 @ ~14' clayey sand (hard). Tightly packed.

7/7/10 — L. Sanchez pg 4 of

1057	Collect grab C-03 and more PC-03 @ ~14' TD. Clayey sand (hard) Tightly packed.
1102	Collect grab SW-03 and more PC-03 @ ~14' TD. Clayey sand (hard) Tightly packed.
1107	Collect grab NW-03 and more PC-03 @ ~14' TD. Clayey Sand (hard) and tightly packed.
1120	Excavate each of the previous holes down to a TD of ~16'. The material is still hard, tightly packed clayey sand. Collect grab sample NE-04 and start composite PC-04.
1128	Collect grab SE-04 and more PC-04 @ ~16' TD. Hard packed clayey sand.
1134	Collect grab C-04 and more PC-04 @ ~16' TD. Hard packed clayey sand.
1147	Collect grab SW-04 and more PC-04 @ ~16' TD. Hard packed clayey sand.

7/7/10 cont'd

L. Sanchez

pg. 5 to 25

1150	Callers grab NW-04 and move PE-04 @ ~16' TD. Hard packed clayey sand. All samples are only being analyzed for chloride (EPA300) as previous samples were ND for BTEX & TPH. Only *-02 sample will be run on 24 hour turn. The *-03 & *-04 samples will be held by the lab & only run if needed.
1400	The excavator was able to break the concrete at the base of the ramp. It was 12 to 18" thick & there were no visible signs of contamination. A piece of the Rx excavator hydraulics ~~from~~ broke off & they are hoping to fix it so they can put the sides of the ~~ramp~~ ramp I took with sample.
1435 EST	Drop samples off at Xenco. END

11/4/10

Pg 1 of 1

1619 Call Geoff Leking to get approval for borings to. I can get a proposal from Terracon. to (575) 393-6161 x113)

1621 Left Message

12/2/10

L. Sanchez
T. Phillips
Pg. 1 of 3

1030 CST — L. Sanchez & T. Phillips arrive onsite. Observe a backhoe on site and the backfill pile outside the fence looks to have been disturbed. Observe the assumed water well and it turns out to be connected to the City top up front.

1040 — Open the NW monitoring well. The lock for the cap pulls off. 2" well. The gauge mark is on the NW side of the riser.

NW (mw-2)

1045 — Gauge the water at 66.31' on the NW side of the riser.

(mw-1)

1051 — Move to gauge SE well. 4" well. Gauge mark is on the N side of the riser. 65.99'.

1055 — Take well caps to the ~~trailer~~ yard to have locks cut off and we talk to Pete Turner about any water wells and the backhoe.

1116 — Spoke with Pete Turner over the phone. He said there is no water main and the backhoe is from Eunice. They needed drop for gate.

12/2/10

Pg. 2 of 3

1124 — Return to the site to survey wells. Set up in the center of the site ~~and use the hole marked with an X as the power pole in the middle of the site~~. The land is assumed to be at 100'. The wells will be measured from this datum and then the difference in elevation between the two can be determined.

1212 — GCL measurement to NW well (MW-2) 4.53' minus 100' (95.47')

1216 — GCL measurement to SE well (MW-1) 6.00' minus 100' (94.00')

1230 — Leave site to cut/check the gate new locks for wells and gates.

1345 — Return to site with locks. Lock two gates and two wells.

1401 — Leave site for Trk yo to drop ob gate key.

1430 — Leave Hobbs for Odessa to drop at ~~Transit~~ and FedEx package (water level meter).

12/2/10

PS. 3 of 3

1600	Arrive at United rentals in Olean to drop off survey eq.
1630	Arrive back in Middlesex.

END

Calculations

From an arbitrary datum of 100' the top of (toc) casing of MW-1 is 94.00' and the depth to Gw from toc is 65.99'

Elevation of Gw in MW-1 = 94.00' - 65.99'
= 28.01'

Toc of MW-2 is 95.47' and the depth to Gw from toc is 66.31'

Elevation of Gw in MW-2 = 95.47' - 66.31'
= 29.16'

Difference between MW-1 & MW-2
= 29.16' - 28.01'
= 1.15'

1/3/11

L. Sanden
PS. 1 of 1

1541	E-mailed Geoff Lekin, the updated elevations for the MW's and asked him to take the initial boring locations as the gradient is SE and we will be installing a down gradient boring.

END.

4/14/11

L. Sanchez
Ps. 1 of 1

1623	Called Geoff Leking to get approval to move forward with our boring plan. Left message for him to call me back.. my cell.
1632	End

5/2/11

L Sanchez
ps. 1 of 1

1019	Received an email from Geoff Lekings (Geoffrey R. Leking @ state.nm.us) authorizing us to proceed with our boring plan and to notify him of the results before proceeding with any other work. I called Barrett Bole w/ Terracon to set up a meeting to get a proposal. The meeting will be on 5/5 @ 10:30 am.
1020	End.

Re: Limited Site Investigation
Trucker's #2 Brine Station
West Broadway Place, Hobbs NM
Terracon Project No. A4117046

Dear Daniel Gibson:

Terracon is pleased to submit three copies of the Limited Site Investigation (LSI) report for the above referenced site. This investigation was performed in accordance with Terracon's Proposal Number PA4110073 dated May 5, 2011.

The investigation-derived waste materials are currently staged on-site. Upon your request, Terracon will provide a proposal for characterization and disposal of these materials.

We appreciate the opportunity to perform these services for Key Energy Services, Inc. Please contact either of the undersigned at (432) 684-9600 if you have questions regarding the information provided in the report.

Sincerely,
Terracon

LIMITED SITE INVESTIGATION

Trucker's #2 Brine Station
West Broadway Place
Hobbs NM

Terracon Project No. A4117046
June 22, 2011

1.0 INTRODUCTION

1.1 Site Description

Site Name	Trucker's #2 Brine Station
Site Location/Address	West Broadway Place, Hobbs NM
General Site Description	Former brine station facility

A topographic map is included as Figure 1, and a site plan is included as Figure 2 of Appendix A.

1.2 Scope of Work

Terracon conducted a Limited Site Investigation (LSI) at the Trucker's #2 Brine Station, West Broadway Place, Hobbs NM. At your request, Terracon installed one- 2-inch monitoring well and advanced three soil borings (completed as temporary groundwater sampling points). Upon completion of drilling operations, soil and groundwater samples were submitted for analysis.

The objective of the LSI was to evaluate the presence of chlorides in the on-site soils and groundwater (above relevant laboratory reporting limits) as a result of potential release from on-site brine sales activities. Terracon's LSI was conducted in accordance with Terracon's proposal dated May 11, 2011 as authorized by Daniel Gibson P.G., Corporate Environmental Director, Key Energy Services, Inc. on May 20, 2011.

1.3 Standard of Care

Terracon's services were performed in a manner consistent with generally accepted practices of the profession undertaken in similar studies in the same geographical area during the same time period. Terracon makes no warranties, either express or implied, regarding the findings, conclusions or recommendations. Please note that Terracon does not warrant the work of laboratories, regulatory

agencies or other third parties supplying information used in the preparation of the report. These LSI services were performed in accordance with the scope of work agreed with you, our client, as reflected in our proposal and were not restricted by ASTM E1903-97.

1.4 Additional Scope Limitations

Findings, conclusions and recommendations resulting from these services are based upon information derived from the on-site activities and other services performed under this scope of work; such information is subject to change over time. Certain indicators of the presence of hazardous substances, petroleum products, or other constituents may have been latent, inaccessible, unobservable, nondetectable or not present during these services, and we cannot represent that the site contains no hazardous substances, toxic materials, petroleum products, or other latent conditions beyond those identified during this LSI. Subsurface conditions may vary from those encountered at specific borings or wells or during other surveys, tests, assessments, investigations or exploratory services; the data, interpretations, findings, and our recommendations are based solely upon data obtained at the time and within the scope of these services.

2.0 FIELD ACTIVITIES

2.1 Borings and Monitoring Wells

Terracon's field activities were conducted from June 8, 2011 to June 10, 2011 by Wesley Ty Burrow, a Terracon Staff Geologist. As part of the approved scope of work, one permanent groundwater monitoring well (MW-3) and three soil borings completed as temporary groundwater sampling points (TMW-1, TMW-2, TMW-3) were advanced on site. MW-3 was installed to the northeast of the former brine pit. TMW-1 was advanced to the west of the former brine pit, TMW-2 was installed in the center of the former brine pit. TMW-3 was installed to the southeast of the former brine pit.

Figure 1 presents the general boundaries and topography of the site on portions of the USGS topographic quadrangle map of Hobbs NM (Appendix A). Figure 2 is a site plan that indicates the approximate locations of the soil borings and monitoring wells in relation to the pertinent structures and general site boundaries (Appendix A).

Drilling services were performed by Straub Drilling using a truck-mounted air rotary drilling rig (Versa-Drill) under the supervision of a Terracon Staff Geologist. Soil samples were collected using core barrel sampler. Drilling equipment was decontaminated using a high pressure washer prior to beginning the project and between each soil boring. Sampling equipment was cleaned using an

Alconox® wash and potable water prior to the beginning of the project and before collecting each soil sample.

Soil samples were collected continuously in the upper 10 feet and at 10- foot increments thereafter, while observed to document soil lithology, color, moisture content and sensory evidence of impairment.

The general soil lithology encountered during sample collection consisted of the following:

- Calcareous fine-grained silty sand - 0 to 50-60 feet bgs.
- Fine-grained silty sand - 50-60 feet bgs to terminus of borings at depths of 65 to 80 feet bgs.

Detailed lithologic descriptions are presented on the soil boring logs included in Appendix B.

Groundwater was encountered during installation of temporary groundwater sampling points TMW-1, TMW-2, TMW-3, and monitoring well MW-3 at depths of approximately 68.0 feet bgs, 58.0 feet bgs, 67.0 feet bgs, and 68.0 feet bgs, respectively.

Subsequent to advancement, temporary groundwater sampling points TMW-1, TMW-2, TMW-3 were completed as temporary monitoring wells. MW-3 was completed as flush-mounted groundwater monitoring well. The monitoring well and the temporary monitoring wells were completed using the following methodology:

- Installation of 20 feet of 2-inch diameter, 0.010-inch machine slotted PVC well screen with a threaded bottom cap;
- Installation of 58 feet of 2-inch diameter, threaded, flush joint PVC riser pipe to the surface;
- Addition of a pre-sieved [20/40-grade annular silica sand pack] from the bottom of the boring to approximately 2 feet above the top of the well screen;
- Addition of hydrated bentonite seal above the sand pack filter zone;
- Addition of a Portland cement to the near surface;
- Installation of an 8-inch diameter, circular, bolt-down, steel, monitoring well cover with locking well cap inset in a flush-mount, concrete well pad (permanent monitoring well only).

Monitoring well construction details are presented on the soil boring logs for these monitoring wells and are included in Appendix B.

The monitoring wells were developed by surging and removing groundwater with a ProActiv submersible pump until the groundwater was relatively free of fine-grained sediment. The submersible pump was decontaminated with Alconox® wash and potable water before/after each well was purged. Approximately 5 gallons of groundwater were removed from each of the temporary groundwater sampling points TMW-1, TMW-2, and TMW-3. Approximately 8 gallons of groundwater was removed from monitoring well MW-3 during development activities. Following sampling, TMW-1, TMW-2, TMW-3 were removed and backfilled with hydrated bentonite pellets and Portland cement to near surface grade.

Soil generated during drilling was stored on site with existing stockpiles, as instructed by client. Groundwater and equipment cleaning water generated during the field activities were placed in Department of Transportation (DOT) approved, 55-gallon steel drums, closed and appropriately labeled with project-specific information and initial accumulation date. A total of two 55-gallon drums containing groundwater/ and decontamination water were generated during these field services and were left onsite for subsequent characterization and disposal.

2.2 Soil and Groundwater Sampling

Terracon's soil sampling program involved submitting up to 12 soil samples from each soil boring for laboratory analysis. Soil samples were collected continuously in upper 10 feet and at 10 foot intervals thereafter. Soil sample intervals for each boring are presented with the soil sample analytical results (Table 1) and are provided on the lithologic boring logs included in Appendix B.

One groundwater sample was collected and analyzed from each of two existing monitoring wells MW-1 and MW-2, newly installed monitoring well MW-3, and from temporary groundwater sampling points TMW-1, TMW-2, and TMW-3. Prior to sample collection, each monitoring well was purged of a minimum of three well casing volumes of groundwater. Subsequent to sufficient recharge, one groundwater sample was collected from each monitoring well utilizing a new ProActiv submersible pump. The submersible pump was decontaminated with Alconox® wash and potable water before/after each sample was collected.

Soil and groundwater samples were collected and placed in laboratory prepared glassware, sealed with custody tape and placed on ice in a cooler which was secured with a custody seal. The sample coolers and completed chain-of-custody forms were relinquished to Xenco analytical laboratory in Odessa, Texas for standard turnaround analysis.

3.0 LABORATORY ANALYTICAL METHODS

The soil and/ or groundwater samples collected from existing monitoring wells MW-1 and MW-2, temporary groundwater sampling points TMW-1, TMW-2, TMW-3, and newly installed monitoring well MW-3 were analyzed for chlorides using EPA method 300.1.

Laboratory results are summarized in the tables included in Appendix C. The executed chain-of-custody form and laboratory data sheets are provided in Appendix D.

4.0 DATA EVALUATION

4.1 Soil Samples

The soil samples collected from the soil borings converted to MW-3 and temporary groundwater sampling points TMW-1, TMW-2, and TMW-3 displayed elevated chloride readings in shallow soils with decreasing concentrations with depth. Chloride concentrations decreased below 300 milligrams per kilogram (mg/Kg) between 22 and 30 fbgs (TMW-1), between 10 and 20 fbgs (TMW-2, TMW-3), and between 32 and 40 fbgs (MW-3).

4.2 Groundwater Samples

The groundwater samples yielded chloride concentrations ranging from 194 milligrams per liter (mg/L) to 1,790 mg/L. The groundwater sample with the most elevated concentration of 1,790 mg/L was collected from TMW-3. The groundwater sample from MW-1 (within 30 feet SE of TMW-3) exhibited a chloride concentration of 194 mg/L. Based on results from MW-1, it is likely that shallow soils with elevated chloride concentrations may have fallen from the boring sidewall during installation of the temporary monitoring well. This impacted soil would cause the elevated concentration. With the exception of TMW-3, the most elevated chloride concentration in groundwater collected was 919 mg/L from MW-2, which is hydraulically up gradient of the former brine pit on the northwest corner of the site. Remaining concentrations were 422 mg/L (MW-3), 452 mg/L (TMW-1), and 733 mg/L (TMW-2).

5.0 FINDINGS AND RECOMMENDATIONS

- Based on the analytical results, the on-site shallow soils in the vicinity of newly installed MW-3 and temporary groundwater sampling points TMW-1, TMW-2, and TMW-3 displayed elevated chloride readings. However, chloride concentrations in soil decreased with depth.

- Based on the analytical results, the on-site groundwater displayed elevated chloride readings, ranging from 194 mg/L to 919 mg/L (excluding data from TMW-3).

- The most elevated chloride concentration was identified in groundwater sampled from MW-2, up gradient of former site operations.

Project Address:

Barrett Bole:

We are reporting to you the results of the analyses performed on the samples received under the project name referenced above and identified with the XENCO Report Number 419675. All results being reported under this Report Number apply to the samples analyzed and properly identified with a Laboratory ID number. Subcontracted analyses are identified in this report with either the NELAC certification number of the subcontract lab in the analyst ID field, or the complete subcontracted report attached to this report.

Unless otherwise noted in a Case Narrative, all data reported in this Analytical Report are in compliance with NELAC standards. Estimation of data uncertainty for this report is found in the quality control section of this report unless otherwise noted. Should insufficient sample be provided to the laboratory to meet the method and NELAC Matrix Duplicate and Matrix Spike requirements, then the data will be analyzed, evaluated and reported using all other available quality control measures.

The validity and integrity of this report will remain intact as long as it is accompanied by this letter and reproduced in full, unless written approval is granted by XENCO Laboratories. This report will be filed for at least 5 years in our archives after which time it will be destroyed without further notice, unless otherwise arranged with you. The samples received, and described as recorded in Report No. 419675 will be filed for 60 days, and after that time they will be properly disposed without further notice, unless otherwise arranged with you. We reserve the right to return to you any unused samples, extracts or solutions related to them if we consider so necessary (e.g., samples identified as hazardous waste, sample sizes exceeding analytical standard practices, controlled substances under regulated protocols, etc).

We thank you for selecting XENCO Laboratories to serve your analytical needs. If you have any questions concerning this report, please feel free to contact us at any time.

Respectfully,

Brent Barron, II
Odessa Laboratory Manager

XENCO Laboratories

Flagging Criteria

X In our quality control review of the data a QC deficiency was observed and flagged as noted. MS/MSD recoveries were found to be outside of the laboratory control limits due to possible matrix /chemical interference, or a concentration of target analyte high enough to affect the recovery of the spike concentration. This condition could also affect the relative percent difference in the MS/MSD.

B A target analyte or common laboratory contaminant was identified in the method blank. Its presence indicates possible field or laboratory contamination.

D The sample(s) were diluted due to targets detected over the highest point of the calibration curve, or due to matrix interference. Dilution factors are included in the final results. The result is from a diluted sample.

E The data exceeds the upper calibration limit; therefore, the concentration is reported as estimated.

F RPD exceeded lab control limits.

J The target analyte was positively identified below the MQL and above the SQL.

U Analyte was not detected.

L The LCS data for this analytical batch was reported below the laboratory control limits for this analyte. The department supervisor and QA Director reviewed data. The samples were either reanalyzed or flagged as estimated concentrations.

H The LCS data for this analytical batch was reported above the laboratory control limits. Supporting QC Data were reviewed by the Department Supervisor and QA Director. Data were determined to be valid for reporting.

K Sample analyzed outside of recommended hold time.

JN A combination of the "N" and the "J" qualifier. The analysis indicates that the analyte is "tentatively identified" and the associated numerical value may not be consistent with the amount actually present in the environmental sample.

XENCO Laboratories

Flagging Criteria

X In our quality control review of the data a QC deficiency was observed and flagged as noted. MS/MSD recoveries were found to be outside of the laboratory control limits due to possible matrix /chemical interference, or a concentration of target analyte high enough to affect the recovery of the spike concentration. This condition could also affect the relative percent difference in the MS/MSD.

B A target analyte or common laboratory contaminant was identified in the method blank. Its presence indicates possible field or laboratory contamination.

D The sample(s) were diluted due to targets detected over the highest point of the calibration curve, or due to matrix interference. Dilution factors are included in the final results. The result is from a diluted sample.

E The data exceeds the upper calibration limit; therefore, the concentration is reported as estimated.

F RPD exceeded lab control limits.

J The target analyte was positively identified below the MQL and above the SQL.

U Analyte was not detected.

L The LCS data for this analytical batch was reported below the laboratory control limits for this analyte. The department supervisor and QA Director reviewed data. The samples were either reanalyzed or flagged as estimated concentrations.

H The LCS data for this analytical batch was reported above the laboratory control limits. Supporting QC Data were reviewed by the Department Supervisor and QA Director. Data were determined to be valid for reporting.

K Sample analyzed outside of recommended hold time.

JN A combination of the "N" and the "J" qualifier. The analysis indicates that the analyte is "tentatively identified" and the associated numerical value may not be consistent with the amount actually present in the environmental sample.

BRL Below Reporting Limit.

RL Reporting Limit

MDL Method Detection Limit

PQL Practical Quantitation Limit

LOD Limit of Detection

LOQ Limit of Quantitation

DL Method Detection Limit

NC Non-Calculable

+ Outside XENCO's scope of NELAC Accreditation.

Sample Receipt Checklist

1. Samples on ice?	Blue	(Water)	No	
2. Shipping container in good condition?	(Yes)	No	None	
3. Custody seals intact on shipping container (cooler) and bottles?	Yes	No	(N/A)	
4. Chain of Custody present?	(Yes)	No		
5. Sample instructions complete on chain of custody?	(Yes)	No		
6. Any missing / extra samples?	Yes	(No)		
7. Chain of custody signed when relinquished / received?	(Yes)	No		
8. Chain of custody agrees with sample label(s)?	(Yes)	No		
9. Container labels legible and intact?	(Yes)	No		
10. Sample matrix / properties agree with chain of custody?	(Yes)	No		
11. Samples in proper container / bottle?	(Yes)	No		
12. Samples properly preserved?	(Yes)	No	N/A	
13. Sample container intact?	(Yes)	No		
14. Sufficient sample amount for indicated test(s)?	(Yes)	No		
15. All samples received within sufficient hold time?	(Yes)	No		
16. Subcontract of sample(s)?	Yes	No	(N/A)	
17. VOC sample have zero head space?	Yes	No	(N/A)	

18. Cooler 1 No.		Cooler 2 No.		Cooler 3 No.		Cooler 4 No.		Cooler 5 No.

RE: TRUCKERS II BRINE ST

Enclosed are the results of analyses for samples received by the laboratory on 07/18/13 12:50.

Cardinal Laboratories is accredited through Texas NELAP under certificate number T104704398-11-3. Accreditation applies to drinking water, non-potable water and solid and chemical materials. All accredited analytes are denoted by an asterisk (*). For a complete list of accredited analytes and matrices visit the TCEQ website at www.tceq.texas.gov/field/qa/lab_accred_certif.html.

Cardinal Laboratories is accreditated through the State of Colorado Department of Public Health and Environment for:

Method EPA 552.2	Haloacetic Acids (HAA-5)
Method EPA 524.2	Total Trihalomethanes (TTHM)
Method EPA 524.4	Regulated VOCs (V1, V2, V3)

Accreditation applies to public drinking water matrices.

This report meets NELAP requirements and is made up of a cover page, analytical results, and a copy of the original chain-of-custody. If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Celey D. Keene

PLEASE NOTE: Liability and Damages. Cardinal's liability and client's exclusive remedy for any claim arising, whether based in contract or tort, shall be limited to the amount paid by client for analyses. All claims, including those for negligence and any other cause whatsoever shall be deemed waived unless made in writing and received by Cardinal within thirty (30) days after completion of the applicable service. In no event shall Cardinal be liable for incidental or consequential damages, including, without limitation, business interruptions, loss of use, or loss of profits incurred by client, its subsidiaries, affiliates or successors arising out of or related to the performance of the services hereunder by Cardinal, regardless of whether such claim is based upon any of the above stated reasons or otherwise. Results relate only to the samples identified above. This report shall not be reproduced except in full with written approval of Cardinal Laboratories.

Notes and Definitions

H1	Sample was received several days after collected and subsequently analyzed past hold time.
B3	Target analyte detected in method blank or continuing calibration blank. Reporting limit elevated to account for blank result.
B1	Target analyte detected in method blank at or above method reporting limit. Sample concentration found to be 10 times above the concentration found in the method blank or less than the reporting limit.
ND	Analyte NOT DETECTED at or above the reporting limit
RPD	Relative Percent Difference
**	Samples not received at proper temperature of 6°C or below.
***	Insufficient time to reach temperature.
-	Chloride by SM4500Cl-B does not require samples be received at or below 6°C
	Samples reported on an as received basis (wet) unless otherwise noted on report

Analytical and Quality Control Report

Wayne Price
Price LLC
312 Encantado Ridge Ct. NE
Rio Rancho, NM, 87124

Report Date: October 11, 2013

Work Order: 13083025

Project Location: West Hobbs, NM
Project Name: Truckers 2
Project Number: BW18

Enclosed are the Analytical Report and Quality Control Report for the following sample(s) submitted to TraceAnalysis, Inc.

Sample	Description	Matrix	Date Taken	Time Taken	Date Received
340631	Sandblast Sand	soil	2013-08-27	14:00	2013-08-28

These results represent only the samples received in the laboratory. The Quality Control Report is generated on a batch basis. All information contained in this report is for the analytical batch(es) in which your sample(s) were analyzed.

This report consists of a total of 41 pages and shall not be reproduced except in its entirety, without written approval of TraceAnalysis, Inc.

Dr. Blair Leftwich, Director
Dr. Michael Abel, Project Manager

Case Narrative

Samples for project Truckers 2 were received by TraceAnalysis, Inc. on 2013-08-28 and assigned to work order 13083025. Samples for work order 13083025 were received intact at a temperature of 3.0 C.

Samples were analyzed for the following tests using their respective methods.

Test	Method	Prep Batch	Prep Date	QC Batch	Analysis Date
SPLP Ag	S 6010C	89079	2013-09-17 at 16:28	105250	2013-09-19 at 11:30

Results for these samples are reported on a wet weight basis unless data package indicates otherwise.

A matrix spike (MS) and matrix spike duplicate (MSD) sample is chosen at random from each preparation batch. The MS and MSD will indicate if a site specific matrix problem is occurring, however, it may not pertain to the samples for work order 13083025 since the sample was chosen at random. Therefore, the validity of the analytical data reported has been determined by the laboratory control sample (LCS) and the method blank (MB). These quality control measures are performed with each preparation batch to ensure data integrity.

All other exceptions associated with this report have been footnoted on the appropriate analytical page to assist in general data comprehension. Please contact the laboratory directly if there are any questions regarding this project.

Analytical Report

Sample: 340631 - Sandblast Sand

Report Definitions

Name	Definition
MDL	Method Detection Limit
MQL	Minimum Quantitation Limit
SDL	Sample Detection Limit

Laboratory Certifications

C	Certifying Authority	Certification Number	Laboratory Location
-	NCTRCA	WFWB384444Y0909	TraceAnalysis
-	DBE	VN 20657	TraceAnalysis
-	HUB	1752439743100-86536	TraceAnalysis
-	WBE	237019	TraceAnalysis
1	NELAP	T104704219-13-9	Lubbock

Standard Flags

F	Description
B	Analyte detected in the corresponding method blank above the method detection limit
H	Analyzed out of hold time
J	Estimated concentration
Jb	The analyte is positively identified and the value is approximated between the SDL and MQL. Sample contains less then ten times the concentration found in the method blank. The result should be considered non-detect to the SDL.
Je	Estimated concentration exceeding calibration range.
MI1	Split peak or shoulder peak
MI2	Instrument software did not integrate
MI3	Instrument software misidentified the peak
MI4	Instrument software integrated improperly
MI5	Baseline correction
Qc	Calibration check outside of laboratory limits.
Qr	RPD outside of laboratory limits
Qs	Spike recovery outside of laboratory limits.
Qsr	Surrogate recovery outside of laboratory limits.
U	The analyte is not detected above the SDL

Result Comments

1 Particulate passed through the filter.

RE: Project: 13083025
Pace Project No.: 30102884

Dear Liz Givens:
Enclosed are the analytical results for sample(s) received by the laboratory on September 13, 2013. The results relate only to the samples included in this report. Results reported herein conform to the most current TNI standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Jacquelyn Collins

PROJECT NARRATIVE

Project: 13083025
Pace Project No.: 30102884

Method: **EPA 903.1**
Description: 903.1 Radium 226
Client: TraceAnalysis, Inc.
Date: September 26, 2013

General Information:
1 sample was analyzed for EPA 903.1. All samples were received in acceptable condition with any exceptions noted below.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

Method Blank:
All analytes were below the report limit in the method blank with any exceptions noted below.

Laboratory Control Spike:
All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

Additional Comments:

This report shall not be reproduced, except in full,

PROJECT NARRATIVE

Project: 13083025
Pace Project No.: 30102884

Method: **EPA 904.0**
Description: 904.0 Radium 228
Client: TraceAnalysis, Inc.
Date: September 26, 2013

General Information:
1 sample was analyzed for EPA 904.0. All samples were received in acceptable condition with any exceptions noted below.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

Method Blank:
All analytes were below the report limit in the method blank with any exceptions noted below.

Laboratory Control Spike:
All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

Additional Comments:

This data package has been reviewed for quality and completeness and is approved for release.

QUALIFIERS

Project: 13083025
Pace Project No.: 30102884

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to changes in sample preparation, dilution of the sample aliquot, or moisture content.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PRL - Pace Reporting Limit.

RL - Reporting Limit.

S - Surrogate

1,2-Diphenylhydrazine (8270 listed analyte) decomposes to Azobenzene.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Act - Activity

Unc - Uncertainty

(MDC) - Minimum Detectable Concentration

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

RE: TRUCKERS II BRINE ST

Enclosed are the results of analyses for samples received by the laboratory on 07/18/13 12:50.

Cardinal Laboratories is accredited through Texas NELAP under certificate number T104704398-11-3. Accreditation applies to drinking water, non-potable water and solid and chemical materials. All accredited analytes are denoted by an asterisk (*). For a complete list of accredited analytes and matrices visit the TCEQ website at www.tceq.texas.gov/field/qa/lab_accred_certif.html.

Cardinal Laboratories is accreditated through the State of Colorado Department of Public Health and Environment for:

Method EPA 552.2	Haloacetic Acids (HAA-5)
Method EPA 524.2	Total Trihalomethanes (TTHM)
Method EPA 524.4	Regulated VOCs (V1, V2, V3)

Accreditation applies to public drinking water matrices.

This report meets NELAP requirements and is made up of a cover page, analytical results, and a copy of the original chain-of-custody. If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Celey D. Keene

RE: SOIL SAMPLES

Enclosed are the results of analyses for samples received by the laboratory on 10/28/13 16:45.

Cardinal Laboratories is accredited through Texas NELAP under certificate number T104704398-11-3. Accreditation applies to drinking water, non-potable water and solid and chemical materials. All accredited analytes are denoted by an asterisk (*). For a complete list of accredited analytes and matrices visit the TCEQ website at www.tceq.texas.gov/field/qa/lab_accred_certif.html.

Cardinal Laboratories is accreditated through the State of Colorado Department of Public Health and Environment for:

Method EPA 552.2	Haloacetic Acids (HAA-5)
Method EPA 524.2	Total Trihalomethanes (TTHM)
Method EPA 524.4	Regulated VOCs (V1, V2, V3)

Accreditation applies to public drinking water matrices.

This report meets NELAP requirements and is made up of a cover page, analytical results, and a copy of the original chain-of-custody. If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Celey D. Keene

Dear Bill,

We have closed the pit pursuant to OCD requirements and have razed the site level and clean. If you get a chance can you go by the west Broadway place site and see if we can start the closure process of the site?

Dear Jim and Bill,

We have some un-contaminated concrete pads that we broke up, would like to place that in bottom of the hole, on top of the red bed
liner. They will be about 12 ft deep and will actually help
stabilize the hole.
Once that is done, we will backfill with soil that meets the
standards. Also, the Proctor Density test was 93%+ compaction.

Please advise!

Subject: RE: Request

Wayne,

I also received your voicemails. Sorry that I have not gotten back sooner, but I'm trying to catch up as I have not been in the office since Thursday. You are good to go with the backfilling as long as the clay is compacted to a minimum 90% proctor, the soils returned to the pit above the liner have chloride concentrations less than 2,500 mg/kg, and that the uppermost four feet have chloride concentrations of less than 600 mg/kg. I am not aware of any specific compaction requirements OCD has on backfill other than wanting the clay liner to be relatively impermeable. The SLO may be desirous of some minimum requirements on the shallower lifts with respect to stability for future use. You probably want to check with Bill Sonnamaker there in Hobbs. Last I heard the SLO will soon be sharing the District 1 office space with OCD.

Subject: Request

Jim Please read what is high ligthed in Red and send me an approval if you agree.

Yesterday Gary was able to get about 30-40% of the highly contaminated pile shipped off-site and same amount of clay back hauled. OCD visited the site yesterday and gave us approval to proceed as discussed.
The clay liner will need to be approximately 6" thick with a minimum of compaction of 90% procter. I will make arrangements to have a field densitometer on site before we backfill pit.

One-call was made and so far we have a fresh water line along the roadway that actually connects to the station. I checked with Liz, and Teresa and with the city and the station city water is still active and we have been paying a monthly connect fee of $75.00/month. The city account # is Key Energy 1502 W Broadway Place # 8238. I went ahead and ask for a disconnect.

Gary and I checked the old water valve at the pump pad and it still had water pressure at that point. Once we get the water disconnected, then Gary will be able to remove the surface part of the lines.

We also have a high pressure gas lines (at least two) on the east side that cuts across the NE part of the site including what looks like two old PE flow lines. Gary and I decided we are not going to work in that area and I will get SLO to approve.

This morning the area is receiving heavy rain at the clay pit area and trucks cannot load due to a hill they have to climb near the Caprock. So we are continued to remove the contaminated pile to meet our original objective of getting this pile removed.

It appears that we were able to get the AFE approved for the entire closure, so I understand Gary is going to remain until the pit is backfilled and site ready for closure. That's Great!

There is one problem concerning the backfill and generally the OCD wants it to be placed in 6" lifts. Gary explained that we were not prepared to complete the job that way as it would drive up our cost.
So, in order to meet OCD's expectations, I will get Wayne Jr. to bring his sampling equipment and stay on the job until the pit is backfilled. This way we will have him collect samples and run composite field test to make sure we are meeting the OCD new pit rule closure requirements. We will collect composite mixed blend every one foot until the pit is filled. If we exceed the 2500 ppm or 800 PPM we will have Gary add additional clean soil and mix in pit until it meets the standards.

The very top 4 feet has to meet a 800 ppm Cl pursuant to Jim (OCD) and I have a call in that the rest of the material between can be 2500 ppm Cl above the liner to a depth of 4ft. where we will transition to the 800 ppm Cl.

Jim Griswold had also ask that we checked the center of the piles to make sure the recent composite samples that we had collected correlate with them. Gary and I collected the samples and I will get those ran today.

I will probably leave Friday morning and move Wayne Jr. in to help reduce our expenses. The filed test will be no charge, just our time & expense. We will also collect confirmation samples to be submitted to the lab for confirmation, which is SOP for OCD.

Wayne Price-Price LLC

PS: Teresa, if we are using the AFE I would think we will have enough to cover the added expense. However, you may need to figure about $600 for the Densitometer and about $7500 for on-site field sampling, coordination and another $1000 for actual third party lab work. When I completed the estimate for MIke these charges were already included in my estimate, but I don't know how the final AFR amount turned out.

Subject: Key Truckers II BW-18 Brine Well Emergency Request

Dear Jim,

Pursuant to our meeting today Key Energy is going to remove a contaminated dirt pile and dispose of at the Gandy-Marley OCD permitted facility, and back-haul red bed clay and install in bottom of pit, compacted to a proctor density 90%+. The existing liner and leak detection of the pit has been removed and we are concerned about run-off from the adjacent contaminated dirt pile causing a possible infiltration of pore water in excess of the WQCC standards.

I have attached for a quick reference of an aerial plot plan, a site investigation map and corresponding results of the borings. We have removed more than 5000 yards out of the pit, with the most heavily concentrated being place adjacent to and on the north side of the pit. We are experiencing some rains and as discussed, we do not want to cause a groundwater impact since the liner has been removed.

This action will prevent a groundwater impact. Please note, as discussed, the old R&R company operated an illegal dump pit for years. The OCD took action and required a clean-up which has been completed, but there was no follow-up on the groundwater impact.
Please note, it does appear that Key's pit did not cause any groundwater contamination as show on the sampling boring report. It does appear the old R&R pit did impact groundwater and has migrated under and across our site.

Once we install the protective barrier then we will have time to strategize on the final closure. Our intention will most likely blend the remaining soils to an acceptable level and backfill the pit. We will seek a closure request before we take that next step. This will allow us time to submit a budget plan to our Houston folks.

We would appreciate an acknowledgement of our actions ASAP!

Sincerely,

Wayne Price

Mr. Brad Jones
New Mexico Oil Conservation Division
1220 South St. Francis Drive
Santa Fe, NM 87505

Certified Mail # 7002 2410 0001 5903 2765

Mr. Jones:

Attached is Form C-144 for the permanent brine pit at the Truckers Brine Station #2 (Truckers 2) in Hobbs, NM located at 1502 West Broadway Place. The Closure Plan for the permanent lined brine pit is as follows:

Background

The permanent lined brine pit at the Truckers 2 is a 140' wide by 140' long and has a total depth of 10'. The pit was never filled over 8' deep to allow for 2' of freeboard. The operations at the facility ceased in April 2007 when the brine well (API# 30-025-07551) was plugged. The unused brine has remained in the pit and become solidified rock salt due to evaporation.

Notice

Key has provided the New Mexico State Land Office (NMSLO), property owner, written notice under certified letter. The letter and certification receipt are attached for review.

Protocols and Procedures

- Key will remove all liquids and solidified chlorides from the permanent pit prior to implementing a closure method and shall dispose of the liquids and solidified chlorides in a division-approved facility.

- Key will remove the pit liner system and dispose of it in a division-approved facility. All on-site equipment associated with permanent pit has already been removed other than a sump (below grade tank) used as secondary containment for the loading pad. The closure plan for this sump (below grade tank) will be outlined in a separate correspondence to the NMOCD Hobbs (Geoff Leking).

Confirmation Sampling Plan

- Key will test the soils beneath the permanent pit to determine whether a release has occurred. Key will collect, at a minimum, a five point, composite sample; collect individual grab samples from any area that is wet, discolored or showing other evidence of a release; and analyze for BTEX, TPH and chlorides to demonstrate that the benzene concentration, as determined by EPA SW-846 methods 8021B does not exceed 0.2 mg/kg; total BTEX concentration, as determined by EPA SW-846 methods 8021B does not exceed 50 mg/kg; the TPH concentration, as determined by EPA method 418.1 does not exceed 100 mg/kg; and the chloride concentration, as determined by EPA method 300.1 does not exceed 250 mg/kg, or the background concentration, whichever is greater.

- If Key determines that a release has occurred, then Key will comply with 19.15.29 NMAC and 19.15.30 NMAC, as appropriate.

Disposal Facility Name and Permit Number

Pit materials, liners and impacted soils:

Sundance Servics
Parabo Facility
3 miles East of Eunice, NM of State Hwy 18
Permit# 010003

Fluids (water and unusable brine):

Mesquite SWD (Rice SWD Well F-29)
Hobbs, NM
Permit # R1574

Crazy Horse SWD
Hobbs, NM
Permit# SWD-1004

Soil Cover Designs:

- The soil cover for closures where Key has removed the pit contents or remediated the contaminated soil to the division's satisfaction shall consist of the background thickness of topsoil or one foot of suitable material to establish vegetation at the site, whichever is greater.

- Key shall construct the soil cover to the site's existing grade and prevent ponding of water and erosion of the cover material.

Alternative Re-vegetation: (The signed agreement for an alternative re-vegetation plan between Key and the NMSLO is attached)

- As this facility is located in the city limits of Hobbs, NM in an industrial area, after the soil cover design is in place, Key shall finish the former pit and below grade tank areas (southeast area of the facility) with packed caliche. As Key will still utilize this facility as a water station, with heavy truck traffic, it is not practicable to re-vegetate the area with native perennial cover. The concrete unloading pad will not be removed from this area.

- The northwest area of the facility (former brine well and pump house location), which will be undisturbed by the closure activities, is covered with packed caliche and will not be seeded for re-vegetation as plans are in place to use this area as a location for fresh water tanks utilizing the water well on location. Key has maintained the water rights for the well from the NMSLO since the well was used in the brine mining operations.

- The northeast area of the facility is undisturbed and already covered by native cover. This area will not be disturbed as part of the closure activities.

- The southwestern area of the facility is covered in packed caliche. A city water tap is located in this area. Due to the heavy truck traffic in this area it will not be re-vegetated with native perennial cover. This area will not be disturbed as part of the closure activities.

Closure Report

- Within 60 days of closure completion, Key will submit a closure report on form C-144, with necessary attachments to document all closure activities including sampling results; information required by 19.15.17 NMAC; a plot plan; and details on back-filling, capping and covering, where applicable.

- In the closure report, Key will certify that all information in the report and attachments is correct and that the operator has complied with all applicable closure requirements and conditions specified in the approved closure plan.

Mr. Brad Jones

Temporary: ☐ Drilling ☐ Workover
☒ Permanent ☐ Emergency ☐ Cavitation ☐ P&A
☒ Lined ☐ Unlined Liner type: Thickness 30 mil ☐ LLDPE ☒ HDPE ☐ PVC ☐ Other
☒ String-Reinforced
Liner Seams: ☒ Welded ☐ Factory ☐ Other Volume: 27,927 bbl Dimensions: L 140 x W 140 x D 8

3.
☐ **Closed-loop System:** Subsection H of 19.15.17.11 NMAC
Type of Operation: ☐ P&A ☐ Drilling a new well ☐ Workover or Drilling (Applies to activities which require prior approval of a permit or notice of intent)
☐ Drying Pad ☐ Above Ground Steel Tanks ☐ Haul-off Bins ☐ Other
☐ Lined ☐ Unlined Liner type: Thickness mil ☐ LLDPE ☐ HDPE ☐ PVC ☐ Other
Liner Seams: ☐ Welded ☐ Factory ☐ Other

4.
☐ **Below-grade tank:** Subsection I of 19.15.17.11 NMAC
Volume: bbl Type of fluid:
Tank Construction material:
☐ Secondary containment with leak detection ☐ Visible sidewalls, liner, 6-inch lift and automatic overflow shut-off
☐ Visible sidewalls and liner ☐ Visible sidewalls only ☐ Other
Liner type: Thickness mil ☐ HDPE ☐ PVC ☐ Other

5.
☐ **Alternative Method:**
Submittal of an exception request is required. Exceptions must be submitted to the Santa Fe Environmental Bureau office for consideration of approval.

6.

Fencing: Subsection D of 19.15.17.11 NMAC *(Applies to permanent pits, temporary pits, and below-grade tanks)*

☒ Chain link, six feet in height, two strands of barbed wire at top *(Required if located within 1000 feet of a permanent residence, school, hospital, institution or church)*

☐ Four foot height, four strands of barbed wire evenly spaced between one and four feet

☐ Alternate. Please specify_____

7.

Netting: Subsection E of 19.15.17.11 NMAC *(Applies to permanent pits and permanent open top tanks)*

☐ Screen ☐ Netting ☐ Other_____

☒ Monthly inspections (If netting or screening is not physically feasible)

8.

Signs: Subsection C of 19.15.17.11 NMAC

☐ 12"x 24", 2" lettering, providing Operator's name, site location, and emergency telephone numbers

☒ Signed in compliance with 19.15.3.103 NMAC

9.

Administrative Approvals and Exceptions:

Justifications and/or demonstrations of equivalency are required. Please refer to 19.15.17 NMAC for guidance.

Please check a box if one or more of the following is requested, if not leave blank:

☐ Administrative approval(s): Requests must be submitted to the appropriate division district or the Santa Fe Environmental Bureau office for consideration of approval.

☐ Exception(s): Requests must be submitted to the Santa Fe Environmental Bureau office for consideration of approval.

10.

Siting Criteria (regarding permitting): 19.15.17.10 NMAC

Instructions: The applicant must demonstrate compliance for each siting criteria below in the application. Recommendations of acceptable source material are provided below. Requests regarding changes to certain siting criteria may require administrative approval from the appropriate district office or may be considered an exception which must be submitted to the Santa Fe Environmental Bureau office for consideration of approval. Applicant must attach justification for request. Please refer to 19.15.17.10 NMAC for guidance. **Siting criteria does not apply to drying pads or above-grade tanks associated with a closed-loop system.**

Ground water is less than 50 feet below the bottom of the temporary pit, permanent pit, or below-grade tank. - NM Office of the State Engineer - iWATERS database search; USGS; Data obtained from nearby wells	☐ Yes ☐ No
Within 300 feet of a continuously flowing watercourse, or 200 feet of any other significant watercourse or lakebed, sinkhole, or playa lake (measured from the ordinary high-water mark). - Topographic map; Visual inspection (certification) of the proposed site	☐ Yes ☐ No
Within 300 feet from a permanent residence, school, hospital, institution, or church in existence at the time of initial application. *(Applies to temporary, emergency, or cavitation pits and below-grade tanks)* - Visual inspection (certification) of the proposed site; Aerial photo; Satellite image	☐ Yes ☐ No ☐ NA
Within 1000 feet from a permanent residence, school, hospital, institution, or church in existence at the time of initial application. *(Applies to permanent pits)* - Visual inspection (certification) of the proposed site; Aerial photo; Satellite image	☐ Yes ☐ No ☐ NA
Within 500 horizontal feet of a private, domestic fresh water well or spring that less than five households use for domestic or stock watering purposes, or within 1000 horizontal feet of any other fresh water well or spring, in existence at the time of initial application. - NM Office of the State Engineer - iWATERS database search; Visual inspection (certification) of the proposed site	☐ Yes ☐ No
Within incorporated municipal boundaries or within a defined municipal fresh water well field covered under a municipal ordinance adopted pursuant to NMSA 1978, Section 3-27-3, as amended. - Written confirmation or verification from the municipality; Written approval obtained from the municipality	☐ Yes ☐ No
Within 500 feet of a wetland. - US Fish and Wildlife Wetland Identification map; Topographic map; Visual inspection (certification) of the proposed site	☐ Yes ☐ No
Within the area overlying a subsurface mine. - Written confirmation or verification or map from the NM EMNRD-Mining and Mineral Division	☐ Yes ☐ No
Within an unstable area. - Engineering measures incorporated into the design; NM Bureau of Geology & Mineral Resources; USGS; NM Geological Society; Topographic map	☐ Yes ☐ No
Within a 100-year floodplain. - FEMA map	☐ Yes ☐ No

Temporary Pits, Emergency Pits, and Below-grad Tanks Permit Application Attachment Checklist: Subsection B of 19.15.17.9 NMAC

Instructions: Each of the following items must be attached to the application. Please indicate, by a check mark in the box, that the documents are attached.

- ☐ Hydrogeologic Report (Below-grade Tanks) - based upon the requirements of Paragraph (4) of Subsection B of 19.15.17.9 NMAC
- ☐ Hydrogeologic Data (Temporary and Emergency Pits) - based upon the requirements of Paragraph (2) of Subsection B of 19.15.17.9 NMAC
- ☐ Siting Criteria Compliance Demonstrations - based upon the appropriate requirements of 19.15.17.10 NMAC
- ☐ Design Plan - based upon the appropriate requirements of 19.15.17.11 NMAC
- ☐ Operating and Maintenance Plan - based upon the appropriate requirements of 19.15.17.12 NMAC
- ☐ Closure Plan (Please complete Boxes 14 through 18, if applicable) - based upon the appropriate requirements of Subsection C of 19.15.17.9 NMAC and 19.15 17.13 NMAC

☐ Previously Approved Design (attach copy of design) API Number: _____ or Permit Number: _____

12.

Closed-loop Systems Permit Application Attachment Checklist: Subsection B of 19.15.17.9 NMAC

Instructions: Each of the following items must be attached to the application. Please indicate, by a check mark in the box, that the documents are attached.

- ☐ Geologic and Hydrogeologic Data (only for on-site closure) - based upon the requirements of Paragraph (3) of Subsection B of 19.15.17.9
- ☐ Siting Criteria Compliance Demonstrations (only for on-site closure) - based upon the appropriate requirements of 19.15.17.10 NMAC
- ☐ Design Plan - based upon the appropriate requirements of 19.15.17.11 NMAC
- ☐ Operating and Maintenance Plan - based upon the appropriate requirements of 19.15.17.12 NMAC
- ☐ Closure Plan (Please complete Boxes 14 through 18, if applicable) - based upon the appropriate requirements of Subsection C of 19.15.17.9 NMAC and 19.15.17.13 NMAC

☐ Previously Approved Design (attach copy of design) API Number: _____

☐ Previously Approved Operating and Maintenance Plan API Number: _____ *(Applies only to closed-loop system that use above ground steel tanks or haul-off bins and propose to implement waste removal for closure)*

13.

Permanent Pits Permit Application Checklist: Subsection B of 19.15.17.9 NMAC

Instructions: Each of the following items must be attached to the application. Please indicate, by a check mark in the box, that the documents are attached.

- ☐ Hydrogeologic Report - based upon the requirements of Paragraph (1) of Subsection B of 19.15.17.9 NMAC
- ☐ Siting Criteria Compliance Demonstrations - based upon the appropriate requirements of 19.15.17.10 NMAC
- ☐ Climatological Factors Assessment
- ☐ Certified Engineering Design Plans - based upon the appropriate requirements of 19.15.17.11 NMAC
- ☐ Dike Protection and Structural Integrity Design - based upon the appropriate requirements of 19.15.17.11 NMAC
- ☐ Leak Detection Design - based upon the appropriate requirements of 19.15.17.11 NMAC
- ☐ Liner Specifications and Compatibility Assessment - based upon the appropriate requirements of 19.15.17.11 NMAC
- ☐ Quality Control/Quality Assurance Construction and Installation Plan
- ☐ Operating and Maintenance Plan - based upon the appropriate requirements of 19.15.17.12 NMAC
- ☐ Freeboard and Overtopping Prevention Plan - based upon the appropriate requirements of 19.15.17.11 NMAC
- ☐ Nuisance or Hazardous Odors, including H_2S, Prevention Plan
- ☐ Emergency Response Plan
- ☐ Oil Field Waste Stream Characterization
- ☐ Monitoring and Inspection Plan
- ☐ Erosion Control Plan
- ☐ Closure Plan - based upon the appropriate requirements of Subsection C of 19.15.17.9 NMAC and 19.15.17.13 NMAC

14.

Proposed Closure: 19.15.17.13 NMAC

Instructions: Please complete the applicable boxes, Boxes 14 through 18, in regards to the proposed closure plan.

Type: ☐ Drilling ☐ Workover ☐ Emergency ☐ Cavitation ☐ P&A ☐ Permanent Pit ☐ Below-grade Tank ☐ Closed-loop System ☐ Alternative

Proposed Closure Method: ☐ Waste Excavation and Removal
☐ Waste Removal (Closed-loop systems only)
☐ On-site Closure Method (Only for temporary pits and closed-loop systems)
☐ In-place Burial ☐ On-site Trench Burial
☐ Alternative Closure Method (Exceptions must be submitted to the Santa Fe Environmental Bureau for consideration)

15.

Waste Excavation and Removal Closure Plan Checklist: (19.15.17.13 NMAC) ***Instructions: Each of the following items must be attached to the closure plan. Please indicate, by a check mark in the box, that the documents are attached.***

- ☐ Protocols and Procedures - based upon the appropriate requirements of 19.15.17.13 NMAC
- ☐ Confirmation Sampling Plan (if applicable) - based upon the appropriate requirements of Subsection F of 19.15.17.13 NMAC
- ☐ Disposal Facility Name and Permit Number (for liquids, drilling fluids and drill cuttings)
- ☐ Soil Backfill and Cover Design Specifications - based upon the appropriate requirements of Subsection H of 19.15.17.13 NMAC
- ☐ Re-vegetation Plan - based upon the appropriate requirements of Subsection I of 19.15.17.13 NMAC
- ☐ Site Reclamation Plan - based upon the appropriate requirements of Subsection G of 19.15.17.13 NMAC

16.
Waste Removal Closure For Closed-loop Systems . Utilize Above Ground Steel Tanks or Haul-off Only: (19.15.17.13.D NMAC)
Instructions: Please indentify the facility or facilities for the disposal of liquids, drilling fluids and drill cuttings. Use attachment if more than two facilities are required.

Disposal Facility Name: _____ Disposal Facility Permit Number: _____

Disposal Facility Name: _____ Disposal Facility Permit Number: _____

Will any of the proposed closed-loop system operations and associated activities occur on or in areas that *will not* be used for future service and operations?
☐ Yes (If yes, please provide the information below) ☐ No

Required for impacted areas which will not be used for future service and operations
☐ Soil Backfill and Cover Design Specifications - - based upon the appropriate requirements of Subsection H of 19.15.17.13 NMAC
☐ Re-vegetation Plan - based upon the appropriate requirements of Subsection I of 19.15.17.13 NMAC
☐ Site Reclamation Plan - based upon the appropriate requirements of Subsection G of 19.15.17.13 NMAC

17.
Siting Criteria (regarding on-site closure methods only): 19.15.17.10 NMAC
Instructions: Each siting criteria requires a demonstration of compliance in the closure plan. Recommendations of acceptable source material are provided below. Requests regarding changes to certain siting criteria may require administrative approval from the appropriate district office or may be considered an exception which must be submitted to the Santa Fe Environmental Bureau office for consideration of approval. Justifications and/or demonstrations of equivalency are required. Please refer to 19.15.17.10 NMAC for guidance.

Mr. Geoffrey Leking
New Mexico Oil Conservation Division
1625 N. French Drive
Hobbs, New Mexico 88240

RECEIVED
SEP 20 2010
HOBBSOCD

Certified Mail # 7002 2410 0001 5903 2758

Mr. Leking:

Attached is Form C-144 for the sump (below grade tank) at the Truckers Brine Station #2 (Truckers 2) in Hobbs, NM located at 1502 West Broadway Place. The Closure Plan for the sump (below grade tank) is as follows:

Background

The sump (below grade tank) at the Truckers 2 is 7' wide by 18' long and has a total depth of 9' and has an open top that is level with the surface. The walls and base of the sump (below grade tank) are constructed of 24" thick concrete. The inside of the sump (below grade tank) has been coated to seal the concrete. The surrounding grade is such that runoff will not flow directly into the sump (below grade tank). The sump (below grade tank) was used as secondary containment for the loading pad in case of a release. This sump (below grade tank) usually just stored rainwater that was collected from the loading pad. The sump (below grade tank) has a 4" overflow line that would transfer the water back to the permanent brine pit when it became full. The overflow is located 1' below the top of the sump (below grade tank to allow for over 1' of freeboard. The operations at the facility ceased in April 2007 when the brine well (API# 30-025-07551) was plugged.

Notice

Key has provided the New Mexico State Land Office (NMSLO), property owner, written notice under certified letter. The letter and certification receipt are attached for review.

Protocols and Procedures

- Key will remove all liquids and solidified chlorides from the sump (below grade tank) prior to implementing a closure method and shall dispose of the liquids in a division-approved facility.

- Key will pressure wash the walls of the sump (below grade tank) and dispose of the water in a division-approved facility.

- Once the sump (below grade tank) is cleaned it will be visually inspected for integrity.

- Key will break up the concrete walls and base and shall dispose of the materials in a division-approved facility.

- All on-site equipment associated with permanent pit has already been removed other than a sump (below grade tank) and the permanent brine pit. The closure plan for the permanent brine pit will be outlined in a separate correspondence to the NMOCD Santa Fe (Brad Jones).

Confirmation Sampling Plan

- Key will test the soils on the side walls and beneath the sump (below grade tank) to determine whether a release has occurred. Key will collect, at a minimum, a five point, composite sample (four side walls and base); collect individual grab samples from any area that is wet, discolored or showing other evidence of a release; and analyze for BTEX, TPH and chlorides to demonstrate that the benzene concentration, as determined by EPA SW-846 methods 8021B does not exceed 0.2 mg/kg; total BTEX concentration, as determined by EPA SW-846 methods 8021B does not exceed 50 mg/kg; the TPH concentration, as determined by EPA method 418.1 does not exceed 100 mg/kg; and the chloride concentration, as determined by EPA method 300.1 does not exceed 250 mg/kg, or the background concentration, whichever is greater.

- If Key determines that a release has occurred, then Key will comply with 19.15.29 NMAC and 19.15.30 NMAC, as appropriate.

Disposal Facility Name and Permit Number

Sump (below grade tank) materials and impacted soils:

Sundance Servics
Parabo Facility
3 miles East of Eunice, NM of State Hwy 18
Permit# 010003

Fluids (water and unusable brine):

Mesquite SWD (Rice SWD Well F-29)
Hobbs, NM
Permit # R1574

Crazy Horse SWD
Hobbs, NM
Permit# SWD-1004

Soil Cover Designs:

- The soil cover for closures where Key has removed the below grade tank contents or remediated the contaminated soil to the division's satisfaction shall consist of the background thickness of topsoil or one foot of suitable material to establish vegetation at the site, whichever is greater.

- Key shall construct the soil cover to the site's existing grade and prevent ponding of water and erosion of the cover material.

Alternative Re-vegetation: (The signed agreement for an alternative re-vegetation plan between Key and the NMSLO is attached)

- As this facility is located in the city limits of Hobbs, NM in an industrial area, after the soil cover design is in place, Key shall finish the former pit and below grade tank areas (southeast area of the facility) with packed caliche. As Key will still utilize this facility as a water station, with heavy truck traffic, it is not practicable to re-vegetate the area with native perennial cover. The concrete unloading pad will not be removed from this area.

- The northwest area of the facility (former brine well and pump house location), which will be undisturbed by the closure activities, is covered with packed caliche and will not be seeded for re-vegetation as plans are in place to use this area as a location for fresh water tanks utilizing the water well on location. Key has maintained the water rights for the well from the NMSLO since the well was used in the brine mining operations.

- The northeast area of the facility is undisturbed and already covered by native cover. This area will not be disturbed as part of the closure activities.

- The southwestern area of the facility is covered in packed caliche. A city water tap is located in this area. Due to the heavy truck traffic in this area it will not be re-vegetated with native perennial cover. This area will not be disturbed as part of the closure activities.

Closure Report

- Within 60 days of closure completion, Key will submit a closure report on form C-144, with necessary attachments to document all closure activities including sampling results; information required by 19.15.17 NMAC; a plot plan; and details on back-filling, capping and covering, where applicable.

- In the closure report, Key will certify that all information in the report and attachments is correct and that the operator has complied with all applicable closure requirements and conditions specified in the approved closure plan.

Sincerely,

Louis Sanchez

Form C-144
July 21, 2008

For temporary pits, closed-loop systems, and below-grade tanks, submit to the appropriate NMOCD District Office.
For permanent pits and exceptions submit to the Santa Fe Environmental Bureau office and provide a copy to the appropriate NMOCD District Office.

Pit, Closed-Loop System, Below-Grade Tank, or Proposed Alternative Method Permit or Closure Plan Application

Type of action:
- ☐ Permit of a pit, closed-loop system, below-grade tank, or proposed alternative method
- ☐ Closure of a pit, closed-loop system, below-grade tank, or proposed alternative method
- ☐ Modification to an existing permit
- ☒ Closure plan only submitted for an existing permitted or non-permitted pit, closed-loop system, below-grade tank, or proposed alternative method

Instructions: Please submit one application (Form C-144) per individual pit, closed-loop system, below-grade tank or alternative request

Please be advised that approval of this request does not relieve the operator of liability should operations result in pollution of surface water, ground water or the environment. Nor does approval relieve the operator of its responsibility to comply with any other applicable governmental authority's rules, regulations or ordinances.

Siting Criteria (regarding permitting): 19.15.17.10 NMAC

Instructions: The applicant must demonstrate compliance for each siting criteria below in the application. Recommendations of acceptable source material are provided below. Requests regarding changes to certain siting criteria may require administrative approval from the appropriate district office or may be considered an exception which must be submitted to the Santa Fe Environmental Bureau office for consideration of approval. Applicant must attach justification for request. Please refer to 19.15.17.10 NMAC for guidance. **Siting criteria does not apply to drying pads or above-grade tanks associated with a closed-loop system.**

Ground water is less than 50 feet below the bottom of the temporary pit, permanent pit, or below-grade tank. - NM Office of the State Engineer - iWATERS database search; USGS; Data obtained from nearby wells	☐ Yes ☐ No
Within 300 feet of a continuously flowing watercourse, or 200 feet of any other significant watercourse or lakebed, sinkhole, or playa lake (measured from the ordinary high-water mark). - Topographic map; Visual inspection (certification) of the proposed site	☐ Yes ☐ No
Within 300 feet from a permanent residence, school, hospital, institution, or church in existence at the time of initial application. *(Applies to temporary, emergency, or cavitation pits and below-grade tanks)* - Visual inspection (certification) of the proposed site; Aerial photo; Satellite image	☐ Yes ☐ No ☐ NA
Within 1000 feet from a permanent residence, school, hospital, institution, or church in existence at the time of initial application. *(Applies to permanent pits)* - Visual inspection (certification) of the proposed site; Aerial photo; Satellite image	☐ Yes ☐ No ☐ NA
Within 500 horizontal feet of a private, domestic fresh water well or spring that less than five households use for domestic or stock watering purposes, or within 1000 horizontal feet of any other fresh water well or spring, in existence at the time of initial application. - NM Office of the State Engineer - iWATERS database search; Visual inspection (certification) of the proposed site	☐ Yes ☐ No
Within incorporated municipal boundaries or within a defined municipal fresh water well field covered under a municipal ordinance adopted pursuant to NMSA 1978, Section 3-27-3, as amended. - Written confirmation or verification from the municipality; Written approval obtained from the municipality	☐ Yes ☐ No
Within 500 feet of a wetland. - US Fish and Wildlife Wetland Identification map; Topographic map; Visual inspection (certification) of the proposed site	☐ Yes ☐ No
Within the area overlying a subsurface mine. - Written confirmation or verification or map from the NM EMNRD-Mining and Mineral Division	☐ Yes ☐ No
Within an unstable area. - Engineering measures incorporated into the design; NM Bureau of Geology & Mineral Resources; USGS; NM Geological Society; Topographic map	☐ Yes ☐ No
Within a 100-year floodplain. - FEMA map	☐ Yes ☐ No

11.
Temporary Pits, Emergency Pits, and Below-grade Tanks Permit Application Attachment Checklist: Subsection B of 19.15.17.9 NMAC
Instructions: Each of the following items must be attached to the application. Please indicate, by a check mark in the box, that the documents are attached.

- ☐ Hydrogeologic Report (Below-grade Tanks) - based upon the requirements of Paragraph (4) of Subsection B of 19.15.17.9 NMAC
- ☐ Hydrogeologic Data (Temporary and Emergency Pits) - based upon the requirements of Paragraph (2) of Subsection B of 19.15.17.9 NMAC
- ☐ Siting Criteria Compliance Demonstrations - based upon the appropriate requirements of 19.15.17.10 NMAC
- ☐ Design Plan - based upon the appropriate requirements of 19.15.17.11 NMAC
- ☐ Operating and Maintenance Plan - based upon the appropriate requirements of 19.15.17.12 NMAC
- ☐ Closure Plan (Please complete Boxes 14 through 18, if applicable) - based upon the appropriate requirements of Subsection C of 19.15.17.9 NMAC and 19.15.17.13 NMAC

☐ Previously Approved Design (attach copy of design) API Number: _____ or Permit Number: _____

12.
Closed-loop Systems Permit Application Attachment Checklist: Subsection B of 19.15.17.9 NMAC
Instructions: Each of the following items must be attached to the application. Please indicate, by a check mark in the box, that the documents are attached.

- ☐ Geologic and Hydrogeologic Data (only for on-site closure) - based upon the requirements of Paragraph (3) of Subsection B of 19.15.17.9
- ☐ Siting Criteria Compliance Demonstrations (only for on-site closure) - based upon the appropriate requirements of 19.15.17.10 NMAC
- ☐ Design Plan - based upon the appropriate requirements of 19.15.17.11 NMAC
- ☐ Operating and Maintenance Plan - based upon the appropriate requirements of 19.15.17.12 NMAC
- ☐ Closure Plan (Please complete Boxes 14 through 18, if applicable) - based upon the appropriate requirements of Subsection C of 19.15.17.9 NMAC and 19.15.17.13 NMAC

☐ Previously Approved Design (attach copy of design) API Number: _____

☐ Previously Approved Operating and Maintenance Plan API Number: _____ *(Applies only to closed-loop system that use above ground steel tanks or haul-off bins and propose to implement waste removal for closure)*

13.
Permanent Pits Permit Application Checklist: Subsection B of 19.15.17.9 NMAC
Instructions: Each of the following items must be attached to the application. Please indicate, by a check mark in the box, that the documents are attached.

- ☐ Hydrogeologic Report - based upon the requirements of Paragraph (1) of Subsection B of 19.15.17.9 NMAC
- ☐ Siting Criteria Compliance Demonstrations - based upon the appropriate requirements of 19.15.17.10 NMAC
- ☐ Climatological Factors Assessment
- ☐ Certified Engineering Design Plans - based upon the appropriate requirements of 19.15.17.11 NMAC
- ☐ Dike Protection and Structural Integrity Design - based upon the appropriate requirements of 19.15.17.11 NMAC
- ☐ Leak Detection Design - based upon the appropriate requirements of 19.15.17.11 NMAC
- ☐ Liner Specifications and Compatibility Assessment - based upon the appropriate requirements of 19.15.17.11 NMAC
- ☐ Quality Control/Quality Assurance Construction and Installation Plan
- ☐ Operating and Maintenance Plan - based upon the appropriate requirements of 19.15.17.12 NMAC
- ☐ Freeboard and Overtopping Prevention Plan - based upon the appropriate requirements of 19.15.17.11 NMAC
- ☐ Nuisance or Hazardous Odors, including H_2S, Prevention Plan
- ☐ Emergency Response Plan
- ☐ Oil Field Waste Stream Characterization
- ☐ Monitoring and Inspection Plan
- ☐ Erosion Control Plan
- ☐ Closure Plan - based upon the appropriate requirements of Subsection C of 19.15.17.9 NMAC and 19.15.17.13 NMAC

14.
Proposed Closure: 19.15.17.13 NMAC
Instructions: Please complete the applicable boxes, Boxes 14 through 18, in regards to the proposed closure plan.

Type: ☐ Drilling ☐ Workover ☐ Emergency ☐ Cavitation ☐ P&A ☐ Permanent Pit ☒ Below-grade Tank ☐ Closed-loop System ☐ Alternative

Proposed Closure Method: ☒ Waste Excavation and Removal
☐ Waste Removal (Closed-loop systems only)
☐ On-site Closure Method (Only for temporary pits and closed-loop systems)
☐ In-place Burial ☐ On-site Trench Burial
☐ Alternative Closure Method (Exceptions must be submitted to the Santa Fe Environmental Bureau for consideration)

15.
Waste Excavation and Removal Closure Plan Checklist: (19.15.17.13 NMAC) ***Instructions: Each of the following items must be attached to the closure plan. Please indicate, by a check mark in the box, that the documents are attached.***

- ☒ Protocols and Procedures - based upon the appropriate requirements of 19.15.17.13 NMAC
- ☒ Confirmation Sampling Plan (if applicable) - based upon the appropriate requirements of Subsection F of 19.15.17.13 NMAC
- ☒ Disposal Facility Name and Permit Number (for liquids, drilling fluids and drill cuttings)
- ☒ Soil Backfill and Cover Design Specifications - based upon the appropriate requirements of Subsection H of 19.15.17.13 NMAC
- ☒ Re-vegetation Plan - based upon the appropriate requirements of Subsection I of 19.15.17.13 NMAC
- ☒ Site Reclamation Plan - based upon the appropriate requirements of Subsection G of 19.15.17.13 NMAC

16.

Waste Removal Closure For Closed-loop Systems That Utilize Above Ground Steel Tanks or Haul-off Bins Only: (19.15.17.13.D NMAC)

Instructions: Please indentify the facility or facilities for the disposal of liquids, drilling fluids and drill cuttings. Use attachment if more than two facilities are required.

Disposal Facility Name: _____ Disposal Facility Permit Number: _____

Disposal Facility Name: _____ Disposal Facility Permit Number: _____

Will any of the proposed closed-loop system operations and associated activities occur on or in areas that *will not* be used for future service and operations?

☐ Yes (If yes, please provide the information below) ☐ No

Required for impacted areas which will not be used for future service and operations:

☐ Soil Backfill and Cover Design Specifications - - based upon the appropriate requirements of Subsection H of 19.15.17.13 NMAC

☐ Re-vegetation Plan - based upon the appropriate requirements of Subsection I of 19.15.17.13 NMAC

☐ Site Reclamation Plan - based upon the appropriate requirements of Subsection G of 19.15.17.13 NMAC

17.

Siting Criteria (regarding on-site closure methods only): 19.15.17.10 NMAC

Instructions: Each siting criteria requires a demonstration of compliance in the closure plan. Recommendations of acceptable source material are provided below. Requests regarding changes to certain siting criteria may require administrative approval from the appropriate district office or may be considered an exception which must be submitted to the Santa Fe Environmental Bureau office for consideration of approval. Justifications and/or demonstrations of equivalency are required. Please refer to 19.15.17.10 NMAC for guidance.

Ground water is less than 50 feet below the bottom of the buried waste. - NM Office of the State Engineer - iWATERS database search; USGS; Data obtained from nearby wells	☐ Yes ☐ No ☐ NA

Certified Mail # 7007 2560 0003 3687 6938

Mr. Ikeda:

The letter is to notify the New Mexico State Land Office (NMSLO) of Key Energy Service, Inc.'s (Key) plan to close the brine pit and below grade tank (loading area sump) at our former brine station located at 1502 W Broadway Place, Hobbs, NM. Per 19.15.17.13 NMAC Key is required to notify the land owner of the closure of such facilities. Please consider this certified letter as notification of such closure plans. Thank you and please feel free to contact me with any questions.

Sincerely,

Louis Sanchez

Alternative Re-vegetation Authorization

Soil cover designs:

- The soil cover for closures where Key has removed the pit contents or remediated the contaminated soil to the division's satisfaction shall consist of the background thickness of topsoil or one foot of suitable material to establish vegetation at the site, whichever is greater.

- Key shall construct the soil cover to the site's existing grade and prevent ponding of water and erosion of the cover material.

Alternative Re-vegetation:

- As this facility is located in the city limits of Hobbs, NM in an industrial area, after the soil cover design is in place, Key shall finish the former pit and below grade tank areas (southeast area of the facility) with packed caliche. As Key will still utilize this facility as a water station, with heavy truck traffic, it is not practicable to re-vegetate the area with native perennial cover. The concrete unloading pad will not be removed from this area.

- The northwest area of the facility (former brine well and pump house location), which will be undisturbed by the closure activities, is covered with packed caliche and will not be seeded for re-vegetation as plans are in place to use this area as a location for fresh water tanks utilizing the water well on location. Key has maintained the water rights for the well from the NMSLO since the well was used in the brine mining operations.

- The northeast area of the facility is undisturbed and already covered by native cover. This area will not be disturbed as part of the closure activities.

- The southwestern area of the facility is covered in packed caliche. A city water tap is located in this area. Due to the heavy truck traffic in this area it will not be re-vegetated with native perennial cover. This area will not be disturbed as part of the closure activities.

Please sign below to demonstrate agreement with this alternative re-vegetation plan:

LETTER OF VIOLATION - Inspection

Dear Operator:

The following inspection(s) indicate that the well, equipment, location or operational status of the well(s) failed to meet standards of the New Mexico Oil Conservation Division as described in the detail section below. To comply with standards imposed by Rules and Regulations of the Division, corrective action must be taken immediately and the situation brought into compliance. The detail section indicates preliminary findings and/or probable nature of the violation. This determination is based on an inspection of your well or facility by an inspector employed by the Oil Conservation Division on the date(s) indicated.

Please notify the proper district office of the Division, in writing, of the date corrective actions are scheduled to be made so that arrangements can be made to reinspect the well and/or facility.

INSPECTION DETAIL SECTION

TRUCKER'S BRINE STATION No.002 K-33-18S-38E **30-025-07551-00-00**

Inspection Date	Type Inspection	Inspector	Violation?	*Significant Non-Compliance?	Corrective Action Due By:	Inspection No.
02/04/2010	Routine/Periodic	Mark Whitaker	Yes	No	5/10/2010	iMAW1003544916

Violations
Emergency/Temporary Pits
Surface Damage/Restoration

Comments on Inspection: Dry hole marker has been installed and is correct. Location not ready to release. Cellar has not been filled in. Anchors, well sign, metal building, control box, fencing, and flowlines need to be removed. Pit southeast of well needs to be properly closed. 1st notice of non-compliance. MW

In the event that a satisfactory response is not received to this letter of direction by the "Corrective Action Due By:" date shown above, further enforcement will occur. Such enforcement may include this office applying to the Division for an order summoning you to a hearing before a Divison Examiner in Santa Fe to show cause why you should not be ordered to permanently plug and abandon this well. Such a hearing may result in imposition of CIVIL PENALTIES for your violation of OCD rules.

Sincerely,

COMPLIANCE OFFICER

Hobbs OCD District Office

Note: Information in Detail Section comes directly from field inspector data entries - not all blanks will contain data.
*Significant Non-Compliance events are reported directly to the EPA, Region VI, Dallas, Texas
