INTRODUCTION

On behalf of Plains Marketing, L.P. (Plains), NOVA Safety and Environmental (NOVA) is pleased to submit this Annual Monitoring Report in compliance with the New Mexico Oil Conservation Division (NMOCD) letter of May 1998, requiring submittal of an Annual Monitoring Report by April 1 of each year. Beginning on May 29, 2004, project management responsibilities were assumed by NOVA. The TNM 97-04 Release Site (the site), which was formerly the responsibility of Texas New Mexico Pipe Line Company (TNM), is now the responsibility of Plains. This report is intended to be viewed as a complete document with text, figures, tables and appendices. The report presents the results of the quarterly groundwater monitoring events conducted in calendar year 2011 only. However, historic data tables as well as 2011 laboratory analytical reports are provided on the enclosed data disk. A Site Location Map is provided as Figure 1.

Groundwater monitoring was conducted during each quarter of 2011 to assess the levels and extent of dissolved phase constituents and Phase Separated Hydrocarbon (PSH). Each groundwater monitoring event consisted of measuring static water levels in monitor wells, checking for the presence of PSH on the water column and purging and sampling of each well exhibiting sufficient recharge. Monitor wells containing a thickness of PSH greater than 0.01 foot were not sampled.

SITE DESCRIPTION AND BACKGROUND INFORMATION

The site is located in the SE 1/4 of the SE 1/4 of Section 11, Township 16 South, Range 35 East in Lea County, New Mexico. Initial site investigation activities were performed for TNM by other environmental consultants. No other specifics concerning the release are currently available. The Release Notification and Corrective Action Form (C-141) is provided as Appendix A.

In October 2009, an *Enhanced Recovery System Workplan* was submitted and subsequently approved by the NMOCD. In March 2009, Plains installed eight air-sparging wells (SW-1 through SW-8) and three recovery wells (RW-2, RW-3 and RW-4) at the site as part of the Enhanced Recovery System. In April 2011, Plains completed the installation of the trailer mounted air-sparging system with ancillary air lines connected to the eight sparging wells. Four total fluid pumps were installed within the four, 4-inch diameter recovery wells.

The Enhanced Recovery System was initially started during the 3rd quarter of 2010. A System Start-Up Report documenting the activities was submitted to the NMOCD in May 2011.

There are currently 15 monitor wells (MW-2 through MW-7, and MW-9 through MW-16 and MW-18) on site along with the eight air-sparging and four recovery wells. An NMOCD permitted infiltration gallery associated with the enhanced recovery system is located on the northwest corner of the site.

FIELD ACTIVITIES

Remediation Efforts

The enhanced recovery system utilizes compressed air to power the eight air-sparging wells along with the four total fluid pumps placed in recovery wells RW-1 through RW-4. The total fluid pumps operate at a pumping rate of approximately 2-3 gallons per minute (gpm) from each recovery well with a combined pumping rate of 8-12 gpm. Recovered oil and water is then passed through an oil-water separator with the oil transferred to a 550 gallon poly tank for staging and later transporting off site. Recovered groundwater is pumped to a large poly aeration tank to allow for volatilization of the hydrocarbons. Groundwater is then transferred through a two bag filter system prior to being pumped through two 500 lbs. carbon filtration canisters. The treated groundwater is sampled from post carbon sampling ports on a monthly basis and is then discharged under Discharge Permit GW-294 to an infiltration gallery located upgradient to the northwest of the release point.

The eight air-sparging wells were each installed to a depth of approximately 65 feet below ground surface (bgs) and operate at a pressure of approximately 5 psi per well. The air-sparging array is designed to buffer the downgradient migration of the dissolved phase hydrocarbon plume while pressing the PSH plume upgradient towards the four recovery wells.

A measurable thickness of PSH was present in four of fifteen monitor wells (MW-2, MW-3, MW-5 and MW-9) and the recovery well (RW-1) during at least three or more quarters of the reporting period. Monitor well MW-6 exhibited measurable PSH during eleven gauging events but was not detected during each of the quarterly gauging and sampling events. The average thickness of PSH in monitor wells and recovery wells exhibiting PSH was 0.83 feet. The maximum thickness of PSH in monitor wells and recovery wells was 2.23 feet as recorded in monitor well MW-3 on October 26, 2011. PSH data for the 2011 gauging events can be found in Table 1. Approximately 275 gallons (approximately 6.5 barrels) of PSH was recovered from the site during the 2011 reporting period. During the 2011 reporting period, approximately 26,243 barrels of groundwater were processed through the on-site remediation system and re-injected into the infiltration gallery. A total of approximately 7,959 gallons (approximately 189.5 barrels) of PSH have been recovered since project inception.

Groundwater Monitoring

Quarterly monitoring events for the reporting period were performed according to the following reduced sampling schedule, which was approved by the NMOCD in correspondence dated April 28, 2004 and amended in correspondences dated June 22, 2005 and May 5, 2006.

The site monitor wells were gauged and sampled on February 28, May 12, August 15, and November 22, 2011. During each sampling event, monitor wells were purged of a minimum of three well volumes of water or until the wells failed to produce water. Purging was performed using a disposable polyethylene bailer for each well or electrical Grundfos pump and dedicated tubing. Groundwater was allowed to recharge and samples were collected using disposable Teflon samplers. Water samples were placed in clean glass containers provided by the laboratory and placed on ice in the field. Purge water was collected in a polystyrene tank and disposed of at a licensed disposal facility.

Locations of the monitor wells and the inferred groundwater gradient, which were constructed from measurements collected during each quarterly sampling event of 2011, are depicted on the Inferred Groundwater Gradient Map(s), Figures 2A-2D. Groundwater elevation data for 2011 is provided as Table 1. Historic groundwater elevation data beginning at project inception is provided on the enclosed data disk.

The most recent Inferred Groundwater Gradient Map, Figure 2D, indicates a general gradient of approximately 0.003 feet/foot to the southeast as measured between monitor well MW-10 and MW-13. This is consistent with data presented on Figures 2A through 2C from earlier in the year. The corrected groundwater elevations ranged between 3,918.95 and 3,923.77 feet above mean sea level, in recovery well RW-1 on August 2 and monitor well MW-14 on May 4, 2011, respectively.

LABORATORY RESULTS

Monitor wells MW-2, MW-3, MW-5, MW-9 and recovery well RW-1 contained PSH throughout the reporting period and were not sampled during 1st, 2nd, 3rd and 4th quarters of 2011.

Groundwater samples obtained during the quarterly sampling events of 2011 were delivered to Trace Analysis, Inc. in Midland, Texas for determination of Benzene, Toluene, Ethylbenzene and Xylene (BTEX) constituent concentrations by EPA Method 8021B. Polynuclear Aromatic Hydrocarbons (PAH) analysis was conducted during the 2011 calendar year on monitor wells MW-4 and MW-6. Based upon historic PAH analytical data, only those wells exhibiting elevated constituent concentrations above WQCC standards are sampled, with the exclusion of those wells containing measurable PSH thicknesses. A listing of BTEX constituent concentrations for 2011 are summarized in Table 2 and the Historic PAH constituent concentrations are summarized in Table 3. Copies of the laboratory reports generated for 2011 are provided on the enclosed data disk. The quarterly groundwater sample results for BTEX constituent concentrations are depicted on Figures 3A through 3D.

SUMMARY

This report presents the results of monitoring activities for the 2011 annual monitoring period. There are currently 15 monitor wells (MW-2 through MW-7, and MW-9 through MW-16, and MW-18) and one recovery well (RW-1) on site. Groundwater elevation contours generated from water level measurements indicate a general gradient of approximately 0.003 feet/foot to the southeast.

A measurable thickness of PSH was present in four monitor wells (MW-2, MW-3, MW-5 and MW-9) and the recovery well (RW-1) during each quarter of the reporting period. Monitor well MW-6 exhibited measurable PSH during eleven gauging events but was not detected during the quarterly gauging and sampling events. Approximately 275 gallons (approximately 6.5 barrels) of PSH was recovered from the site during the 2011 reporting period. A total of approximately 7,959 gallons (approximately 189.5 barrels) of PSH have been recovered since project inception. The average thickness of PSH in monitor wells and recovery wells displaying PSH was 0.83 feet. Generally, 2011 PSH thickness data indicates declining PSH thicknesses in the affected monitor and recovery wells. During the 2011 reporting period, approximately 26,243 barrels of groundwater were processed through the on-site remediation system and re-injected into the infiltration gallery.

Review of laboratory analytical results of groundwater samples collected during the 2011 reporting period indicates BTEX constituent concentrations are below NMOCD regulatory standards in six of the 15 on site monitor wells and recovery well. The remaining nine monitor wells either contained measurable thicknesses of PSH and were not sampled during the four quarterly events or exhibited analytical results above the NMOCD regulatory standard during the reporting period of 2011. Review of PAH analysis indicates an increasing trend in monitor well MW-4 with a decreasing trend in MW-6.

ANTICIPATED ACTIONS

Quarterly monitoring and groundwater sampling will continue in 2012. Plains respectfully requests NMOCD approval to modify the sampling schedule for the following monitor wells:

Monitor well MW-16 is currently sampled on a semi-annual schedule. Plains proposes to modify the schedule to an annual schedule. This up-gradient monitor well was installed during the 1st quarter 2003 and the analytical results indicate BTEX constituent concentrations have been below NMOCD regulatory standards for the last twenty consecutive quarters.

PSH recovery, quarterly groundwater monitoring and sampling will continue in 2012. An Annual Monitoring Report will be submitted to the NMOCD before April 1, 2013.

Based on the results of the PAH analysis over the past several years, further PAH analysis will be conducted only on monitor wells MW-4 and MW-6. As the PSH plume diminishes, other wells will be sampled for PAH as necessary, which have historically exhibited elevated constituents near or above the WQCC standards.

Case Narrative

Samples for project TNM 97-04 Townsend were received by TraceAnalysis, Inc. on 2011-03-01 and assigned to work order 11030108. Samples for work order 11030108 were received intact without headspace and at a temperature of 3.8 C.

Samples were analyzed for the following tests using their respective methods.

Test	Method	Prep Batch	Prep Date	QC Batch	Analysis Date
BTEX	S 8021B	67068	2011-03-04 at 08:44	79032	2011-03-04 at 08:44

Results for these samples are reported on a wet weight basis unless data package indicates otherwise.

A matrix spike (MS) and matrix spike duplicate (MSD) sample is chosen at random from each preparation batch. The MS and MSD will indicate if a site specific matrix problem is occurring, however, it may not pertain to the samples for work order 11030108 since the sample was chosen at random. Therefore, the validity of the analytical data reported has been determined by the laboratory control sample (LCS) and the method blank (MB). These quality control measures are performed with each preparation batch to ensure data integrity.

All other exceptions associated with this report have been footnoted on the appropriate analytical page to assist in general data comprehension. Please contact the laboratory directly if there are any questions regarding this project.

Case Narrative

Samples for project TNM 97-04 Townsend were received by TraceAnalysis, Inc. on 2011-05-13 and assigned to work order 11051305. Samples for work order 11051305 were received intact without headspace and at a temperature of 16.1 C.

Samples were analyzed for the following tests using their respective methods.

Test	Method	Prep		QC		Analysis	
		Batch	Date	Batch	Date		
BTEX	S 8021B	69006	2011-05-13 at 10:00	81278	2011-05-13 at 23:32		
BTEX	S 8021B	69070	2011-05-18 at 13:00	81380	2011-05-18 at 14:48		

Results for these samples are reported on a wet weight basis unless data package indicates otherwise.

A matrix spike (MS) and matrix spike duplicate (MSD) sample is chosen at random from each preparation batch. The MS and MSD will indicate if a site specific matrix problem is occurring, however, it may not pertain to the samples for work order 11051305 since the sample was chosen at random. Therefore, the validity of the analytical data reported has been determined by the laboratory control sample (LCS) and the method blank (MB). These quality control measures are performed with each preparation batch to ensure data integrity.

All other exceptions associated with this report have been footnoted on the appropriate analytical page to assist in general data comprehension. Please contact the laboratory directly if there are any questions regarding this project.

Case Narrative

Samples for project TNM 97-04 Townsend were received by TraceAnalysis, Inc. on 2011-08-17 and assigned to work order 11081716. Samples for work order 11081716 were received intact without headspace and at a temperature of 3.3 C.

Samples were analyzed for the following tests using their respective methods.

Test	Method	Prep		QC		Analysis	
		Batch	Date	Batch	Date		
BTEX	S 8021B	71373	2011-08-18 at 11:38	84063	2011-08-18 at 11:38		
BTEX	S 8021B	71487	2011-08-23 at 08:50	84191	2011-08-23 at 08:50		

Results for these samples are reported on a wet weight basis unless data package indicates otherwise.

A matrix spike (MS) and matrix spike duplicate (MSD) sample is chosen at random from each preparation batch. The MS and MSD will indicate if a site specific matrix problem is occurring, however, it may not pertain to the samples for work order 11081716 since the sample was chosen at random. Therefore, the validity of the analytical data reported has been determined by the laboratory control sample (LCS) and the method blank (MB). These quality control measures are performed with each preparation batch to ensure data integrity.

All other exceptions associated with this report have been footnoted on the appropriate analytical page to assist in general data comprehension. Please contact the laboratory directly if there are any questions regarding this project.

Case Narrative

Samples for project TNM 97-04 Townsend were received by TraceAnalysis, Inc. on 2011-11-23 and assigned to work order 11112305. Samples for work order 11112305 were received intact with headspace and at a temperature of 9.9 C.

Samples were analyzed for the following tests using their respective methods.

Test	Method	Prep Batch	Prep Date	QC Batch	Analysis Date
BTEX	S 8021B	73644	2011-11-23 at 11:15	86735	2011-11-23 at 13:10

Results for these samples are reported on a wet weight basis unless data package indicates otherwise.

A matrix spike (MS) and matrix spike duplicate (MSD) sample is chosen at random from each preparation batch. The MS and MSD will indicate if a site specific matrix problem is occurring, however, it may not pertain to the samples for work order 11112305 since the sample was chosen at random. Therefore, the validity of the analytical data reported has been determined by the laboratory control sample (LCS) and the method blank (MB). These quality control measures are performed with each preparation batch to ensure data integrity.

Samples were received on ice.

All other exceptions associated with this report have been footnoted on the appropriate analytical page to assist in general data comprehension. Please contact the laboratory directly if there are any questions regarding this project.

Case Narrative

Samples for project TNM 97-04 Townsend were received by TraceAnalysis, Inc. on 2011-12-16 and assigned to work order 11121924. Samples for work order 11121924 were received intact at a temperature of 11.3 C.

Samples were analyzed for the following tests using their respective methods.

Test	Method	Prep Batch	Prep Date	QC Batch	Analysis Date
PAH	S 8270D	74334	2012-12-21 at 15:00	87535	2012-01-02 at 11:40

Results for these samples are reported on a wet weight basis unless data package indicates otherwise.

A matrix spike (MS) and matrix spike duplicate (MSD) sample is chosen at random from each preparation batch. The MS and MSD will indicate if a site specific matrix problem is occurring, however, it may not pertain to the samples for work order 11121924 since the sample was chosen at random. Therefore, the validity of the analytical data reported has been determined by the laboratory control sample (LCS) and the method blank (MB). These quality control measures are performed with each preparation batch to ensure data integrity.

All other exceptions associated with this report have been footnoted on the appropriate analytical page to assist in general data comprehension. Please contact the laboratory directly if there are any questions regarding this project.
