Hi Glenn,
Is there any need to put something into the FTP site for this (a copy of my email and figures)?

Joe,

As per our discussion of June 5, 2015, OCD approves Kinder Morgan's proposed workplan for the Jacques' sites. This approval by OCD does not relieve Kinder Morgan of responsibility should future information indicate a threat to ground water, surface water, human health, or the environment. Furthermore, it does not relieve Kinder Morgan of responsibility for compliance with any federal, state, or local laws and/or regulations. Please let OCD know when you are about to mobilize so that OCD has an opportunity to witness the investigation.

Please give me a call if you have any other issues.

Hey Guys,

What time is good for you on this meeting for today to discuss Jaquez? I think I can dig up a call in number, or do you want me to call you on you conference room phone line?

Hi Glenn,
Have you had a chance to take a look at this to decide if you need any more monitoring well locations than these? Should we schedule a call to discuss?

Subject: FW: Jaquez Site #3R-194 - Proposed Work Borings and Wells

Hello Glenn,
I would appreciate some feedback on the proposed monitoring well locations for the Jaquez site follow-up work. Three site maps are included in the attached PDF document. The first map (labeled Figure1) shows our proposed monitoring well locations and soil boring locations. The monitoring wells and one soil boring location inside the boundary of the excavated area are located in areas where exceedances of standards were reported for samples collected during the 2011 soil excavation. Additional borings around the excavation perimeter and on the west side of the excavation will be conducted at the request of Mr. Jaquez. The second map (labeled Figure 3) shows the locations of all samples collected at the time of the excavation. The third map (labeled Figure 4) shows the locations where exceedances occurred and the reported concentrations.

It should be noted that EPCGP has made contact with the McCarty family, owners of the property directly north of the Jaquez property, and they appear to be receptive to a plan to remove the trailer house and allow us to excavate remaining impacted soil on their property. If that excavation occurs, the two monitoring wells shown along the northern fence line at the Jaquez property will potentially be relocated onto the McCarty property.

I would like to know if the distribution of the proposed monitoring wells is satisfactory, or if the NMOCD would prefer to see additional monitoring wells in the excavation area. We hope to begin field work on the site in the next month, and your feedback on this issue would be greatly appreciated. Thanks,

Joseph (Joe) Wiley, P.G.

Joe,

I've got two files attached. Both have the cover notes on the current plan indicating the logic behind the monitoring wells and the one soil boring inside the excavation. One file has the historic excavation sample maps and the notes.

I'll get Steve fully downloaded on what is happening here next week.

Mike
