SALADO BRINE SALES
SODIUM LEASE
Quarterly, Mine Inspection
Second Quarter, Fiscal Year 1993
(January-March)
February 23, 1993

Background

Mr. William H. Brininstool of XL Transportation was issued a sodium prospecting permit NM 40527 effective October 1, 1980. A \$5,000 bond was executed October 1, 1980 with the Ohio Casualty Insurance Company (No. 2-160-175-10) as surety covering the permit. The permit authorized the drilling of a 2105 foot sodium exploratory well with 970 feet of 7-inch casing in the SE/4 Section 14, T25S, R37E., NMPM. Authorization was also given to construct a plastic lined brine pit, 90' x 90' x 9' deep. Solution mining of sodium continued until January 1993. The brine solution was used as drilling fluid by operators drilling through salt formations to prevent dissolution of the salt formations surrounding the hole. Halite beds in the area are found principally in the Salado Formation of Permian age, with possible occurrences in the overlying Rustler Formation, also of Permian age. Data from three petroleum (gamma ray-neutron) well logs within the area of interest indicate that the halite beds are from 1,150' to 1,2250' thick, and occur at depths between 860' and 1,060' below the surface. A loss of circulation occurred down hole in January 1993 and as a result the down hole pressure which allowed brine water recovery was lost. A cavity pressure test was run and the pressure would only last one day. A new liner and tubing was used and fresh water was pumped in with negative results. Loss of circulation still occurred. A Braden Head Tracer test was implemented and the loss of circulation was located at the 960' to 980' zone as noted on the accompanying well log(See Attachment 1). Salado Brine Sales have ceased operation of this brine well in January 1993. Salado Brine Sales plan abandonment at this time and intend to seal drill holes in order to protect water bearing aquifers. Salado Brine Sales is in the process of applying for a new sodium prospecting permit to be located in another location containing Federal minerals.

Introduction

In March 1993 Michael McGee conducted the 2nd quarterly FY 93 I & E inspection of the Salado Brine Sales sodium lease held by William H. Brininstool of P. O. Drawer A Jal, New Mexico 88252. I was accompanied by the Chris Brininstool on the above ground inspection. The area inspected was the surface extent of the brine well operation. More specifically, the brine well is located in the SE/4 of Section 14 of T. 25 S, R. 37 E., NMPM. (See Figure 1).

Items Covered:

1) **Mine Plan** - (See Figure 2). Sodium is recovered by solution mining, a process in which water is pumped into a halite bed via a drill hole, and the saline brine resulting from dissolution of the halite is then recovered at the surface. The injection pressure of 250 psi created from pumping in fresh water allows brine water to be recovered without the use of recovery pumps. Fresh water is obtained from the Blocker estates water wells. The fresh water is stored in two 300 bbl fiberglass storage tanks on the facility location. When the tanks levels drop the Blocker water well pumps are automatically turned on. The fresh water is pumped from the 300 bbl storage tanks down the casing to a depth of 2101', dissolution in the Halite formation occurs and positive pressure forces brine water through 2 7/8" tubing then into 3" Polyethylene pipeline buried 1' below ground level and then is released into the storage pit. The brine water is stored in a brine storage pit that is equipped with an underwater probe device that automatically activates the injection well pump when the brine water level decreases (See Figure 3). The well head is equipped with 4 valves for backflushing. Brine is produced at 120 gallons per minute. The produced brine water is then pumped into transport trucks. The loading area is concrete with a drainage system connected to a concrete sump pit covered by a metal grill. A key activates the pump at the storage pit which pumps 150 bbls in 8.6 minutes.

2) **Equipment**

- a. TWO 300 bbl fiberglass water tanks
- b. ONE Fresh Water Pump (120 gallons per minute)
- c. 3" polyethylene water pipelines
- d. 7" Downhole Casing
- e. 2 7/8" Brine Water Recovery tubing
- f. 4 Back Flush valves
- g. Lined Storage Pit
- h. One Brine Pump
- i. One Sump Pump
- j. Pit Liner
- K. 18 Transport Trucks

3) **Uses** - The brine solution is used as a drilling fluid by operators drilling salt formations to prevent dissolution of the salt formations surrounding the hole.

4) We discussed their long and short-term plans. Their long-term plan is to open another injection brine well station in another location in the area. Their short term plan is to cease production from this injection brine well permanently due to recovery problems.

5) General Observations & Concerns - Observed two waterlines entering two fiberglass storage tanks. Two water lines exited the storage tanks and entered a water pump. A water line exited the water pump and entered the injection well. A water line exited the injection well and entered a lined storage pit. Adjacent to the storage pit a pump house enclosed a pump which was connected to a pipeline that would pump into transport trucks. The entire operation was fenced in with barbed wire fencing. No surface water leaks or surface contamination was noted. The entire operation was shut down at the time of inspection.

6) Ms. Chris Brininstool discussed the possibility of opening a new brine well station located on federal surface and federal mineral. There are no plans at this time to continue use of this site due to the inhibitive cost of installing brine water pumps and future maintainence costs.

7) Mining plans have been developed , but none of the actions have been analyzed for NEPA.

Mr. Burleson,

RECEIVED
OCT 8 1982

I received a ^{U.S. Geology} ~~Statement~~ ^{Carlbad, NM} from Minerals Management Service for Credit of \$80.⁰⁰. I deducted this from my August payment. I received another statement from Minerals Management Service for more credit. I talked to Shiley 10-7-82 and was told the first Credit statement should of been \$40.⁰⁰ instead of \$80.⁰⁰ so I am including \$40.⁰⁰ with my September payment. The second Credit statement was they had not received my reports for May + June, only the checks. If you have not received any of your reports please let me know and I will send a copy immediately.

Thank you,
Chris Brunsted

WARNING: PUBLIC LAW 97-451 PROVIDES CIVIL AND CRIMINAL PENALTIES FOR FALSE OR INACCURATE REPORTING. Failure to report as required under the terms of the lease, permit, or contract may result in suspension of operations or other enforcement actions.

The Paperwork Reduction Act of 1980 (44 U.S.C. 3501 et seq.) requires us to inform you that this information is being collected to document details of royalty payments on sales of solid minerals from leases on Federal and Indian lands. MMS will use this information to maintain and audit lease accounts.

19 PAGE TOTAL 130.26
20 REPORT TOTAL 130.26

I have read and examined the statements in this report and agree they are accurate and complete.

OMB 1010-0063
(Expires August 31, 1987)
The Paperwork Reduction Act of 1980
(44 U.S.C. 3501 et seq.) requires us to
inform you that this information is being
collected to document solid
minerals production, disposition, and
sales from Federal and Indian leases.
MMS uses the information to reconcile
surface production to sales and disposition
from the lease.
