## **SITE DETAILS**

**Site Location:** Latitude: 36.856422 N, Longitude: -107.753819 W  
**Land Type:** Federal  
**Operator:** Burlington Resources Oil & Gas Company, LP

## **SITE BACKGROUND**

- **Site Assessment:** 8/94
- **Excavation:** 9/94 (80 cy)

Johnston Fed #6A (Site) is being managed pursuant to the procedures set forth in the document entitled, “Remediation Plan for Groundwater Encountered during Pit Closure Activities” (Remediation Plan, El Paso Natural Gas Company / El Paso Field Services Company, 1995). This Remediation Plan was conditionally approved by the New Mexico Oil Conservation Division (OCD) in correspondence dated November 30, 1995; and the OCD approval conditions were adopted into El Paso CGP Company (EPCGP’s) program methods. Currently, the Site is operated by Burlington Resources Oil & Gas Company, LP and is active.

The Site is located on Federal land. Various site investigations have occurred from 1994 through 2006. Monitoring wells were installed in 1994 (MW-1 through MW-4), 1997 (temporary monitoring wells PZ-01 through PZ-07), 2000 (MW-5), and 2006 (MW-6). Free product recovery has been periodically conducted since 1997. Currently, groundwater sampling is conducted on a semi-annual basis and free product was observed in 2014.

## **SUMMARY OF 2014 ACTIVITIES**

On April 2 and October 23, 2014, water levels were gauged at MW-1, MW-2, MW-3, MW-4, MW-5, and MW-6 and groundwater samples were collected from each well that did not contain free product using HydraSleeve™ (HydraSleeve) no-purge passive groundwater sampling devices. The HydraSleeves were set during the previous sampling event approximately 0.5 foot above termination depth of the monitoring wells using a suspension tether and stainless steel weights to collect a sample from the screened interval. Groundwater samples were placed into laboratory-supplied sample containers, packed on ice, and shipped under standard chain-of-custody protocols to TestAmerica Laboratories, Inc. in Corpus Christi, Texas where they were analyzed for benzene, toluene, ethylbenzene, and total xylenes (BTEX). Additional field parameters were collected including dissolved oxygen, temperature, conductivity, pH, and oxidation-reduction potential (ORP) using a YSI multi-parameter instrument, if free product was not present. The water remaining in the HydraSleeves was combined in a waste container and taken to Basin Disposal, Inc. for disposal.

## **SUMMARY TABLES**

Historic analytical and water level data are summarized in Table 1. When free product was present, static water level elevations were corrected for measurable thicknesses of free product (specific gravity of 0.75).

## **SITE MAPS**

Groundwater analytical maps (Figures 1 and 3) and groundwater elevation contour maps (Figures 2 and 4) summarize the results of the 2014 groundwater sampling and gauging events.

## **ANALYTICAL LAB REPORTS**

The groundwater analytical lab reports are included in Appendix A.

## **RESULTS**

- The groundwater flow direction at the Site is generally to the north-northeast (see Figures 2 and 4).
- Approximately 0.33 foot of free product was detected in MW-1 during the April 2014 sampling event. Approximately 0.21 foot of free product was detected on October 23, 2014. Groundwater samples were not collected from MW-1 during 2014 due to the presence of free product.
- BTEX constituents were not detected in groundwater samples collected from MW-2 during the 2014 sampling events.
- Concentrations of BTEX constituents from groundwater samples collected from MW-3 remained below the New Mexico Water Quality Control Commission (NMWQCC) standards during the April 2014 sampling event. Benzene, toluene, and total xylenes were not detected in the October 2014 groundwater samples, and ethylbenzene was reported below the NMWQCC standard.
- Toluene was reported as an estimated value below the reporting limit (J-flagged) at MW-4 for the April sampling event and non-detect for the October 2014 sampling event. Benzene, ethylbenzene, and total xylenes were not detected in April or October 2014 at MW-4.
- BTEX constituents were not detected in groundwater samples collected from MW-5 during the April 2014 sampling event. Benzene and ethylbenzene were not detected, and toluene and total xylenes were J-flagged during the October 2014 sampling event.

- BTEX constituents were not detected in groundwater samples collected from MW-6 during the 2014 sampling events.

### **PLANNED FUTURE ACTIVITIES**

Installation of additional monitoring wells is planned, after establishment of a right-of-way with the United States Bureau of Land Management. The wells will be installed to further assess the extent of dissolved-phase hydrocarbons and to confirm and/or further define the groundwater gradient at the Site. MW-1 through MW-6 and the newly-installed monitoring wells will be sampled on a semi-annual basis.
