2017 ANNUAL GROUNDWATER REPORT

SITE DETAILS

Site Location: Latitude: 36.296081 N, Longitude: -107.414109 W
Land Type: Federal
Former Operator: Merrion Oil & Gas (well P&A'd)

SITE BACKGROUND

Environmental Remediation activities at the Canada Mesa #2 (Site) are managed pursuant to the procedures set forth in the document entitled, "Remediation Plan for Groundwater Encountered during Pit Closure Activities" (El Paso Natural Gas Company / El Paso Field Services Company, 1995). This Remediation Plan was conditionally approved by the New Mexico Oil Conservation Division (NMOCD) in correspondence dated November 30, 1995; and the NMOCD approval conditions were adopted into El Paso CGP's (EPCGP's) program methods. Formerly, the Site was operated by Merrion Oil & Gas Company and is no longer active.

Canada Mesa #2 is located on Federal land. An initial site assessment was completed in July 1994, and an excavation to approximately 12 feet below ground surface (bgs) was completed in August of 1994. Various site investigations have occurred since 1994. Monitoring wells were installed in 1995 (MW-1) and 2000 (MW-2 and MW-3). Monitoring wells MW-2 and MW-3 were abandoned in May 2016, ahead of Merrion Oil and Gas Company's reclamation activities.

GROUNDWATER SAMPLING ACTIVITIES

Pursuant to the Remediation Plan, Stantec provided field work notifications via email to NMOCD on May 30, 2017, and November 6, 2017, prior to initiating groundwater sampling activities at the Site. Copies of the 2017 NMOCD notifications are provided in Appendix A. Monitoring well MW-1 was gauged on June 7, 2017, and November 14, 2017. Groundwater samples were collected from MW-1 on June 7, 2017, using a HydraSleeve™ (HydraSleeve) no-purge groundwater sampling device. A groundwater sample was not collected from MW-1 on November 14, 2017, due to the presence of free product. The HydraSleeve was set during the previous sampling event approximately 0.5 foot above termination depth of the monitoring wells using a suspension tether and stainless steel weights to collect a sample from the screened interval.

The groundwater sample was placed into laboratory-supplied sample containers, packed on ice, and shipped under standard chain-of-custody protocols to TestAmerica Laboratories, Inc. in Pensacola, Florida where they were analyzed for benzene, toluene, ethylbenzene, and total xylenes (BTEX). As requested by the NMOCD on November 13, 2018, BTEX constituents were analyzed using United States Environmental Protection Agency (EPA) Method 8260. The unused sample water was placed in a waste container and taken to Basin Disposal, Inc. for disposal. Waste disposal documentation was included as Appendix B.

FREE PRODUCT

Free product was observed in monitoring well MW-1 during the November 2017 gauging event, and a trace amount was recovered during this event.

SUMMARY TABLES

Historic analytical and water level data are summarized in Table 1 and Table 2, respectively. When free product was present, static water level elevations were corrected for measurable thicknesses of free-product (specific gravity of 0.75).

SITE MAPS

Groundwater analytical maps (Figures 1 and 3) and groundwater elevation maps (Figures 2 and 4) summarize results of the 2017 groundwater sampling and gauging events. Groundwater elevation contours were not presented for 2017 due to their only being one monitoring well at the Site.

ANALYTICAL LAB REPORTS

The June 2017 groundwater analytical lab report is included as Appendix C. No groundwater samples were collected for analysis during the November 2017 monitoring event.

GROUNDWATER RESULTS

- Only one monitoring well was present at the site during the June and November 2017 monitoring events; therefore, groundwater flow direction could not be determined.
- Benzene in the sample collected in June 2017 at MW-1 exceeded the New Mexico Water Quality Control Commission (NMWQCC) standard (10 µg/L) in groundwater.
- Toluene in the sample collected in June 2017 at MW-1 exceeded the NMWQCC standard (750 µg/L) for groundwater.
- Ethylbenzene was detected in the sample collected at MW-1 in June 2017, but did not exceed the NMWQCC standard (750 µg/L) for groundwater
- Total Xylenes in the sample collected in June 2017 at MW-1 exceeded the NMWQCC standard (620 µg/L) for groundwater. .

PLANNED FUTURE ACTIVITIES

Installation of six monitoring wells, and advancement of one soil boring adjacent to MW-1, is planned for the Site in the spring of 2018. The wells will be used to further assess the extent of dissolved-phase hydrocarbons and to confirm and/or further define the groundwater gradient at the Site. As part of the scope of work, replacement wells for MW-2 and MW-3 will be installed as part of the scope of work. A work plan detailing these activities has been submitted under separate cover, and the NMOCD will be notified at least 48 hours prior to the start of field activities.

Groundwater monitoring events will be conducted from the existing and new monitoring on a semi-annual basis in 2018. Groundwater samples will be collected from monitoring wells not containing free product and analyzed for BTEX constituents using EPA Method 8260. The 2018 Annual Report documenting the activities completed in 2018 will be submitted in March 2019.

Notes:

The groundwater monitoring dates for each monitoring well where no groundwater samples were collected and analyzed have been omitted.

µg/L = micrograms per liter

Results highlighted yellow exceed their respective New Mexico Water Quality Control Commission (NMWQCC) standards.

"J" = Result is less than the reporting limit but greater than or equal to the method detection limit and the result in an approximate value.

"<" = analyte was not detected at the indicated reporting limit (some historic data were reported at the detection limit).

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
