Subject: RE: [EXT] (Resubmittal) COG - MAS Federal 34A CTB 1 RP 5239 (10-9-18) - Closure Request

Ms. Grant:

The available information indicates that the **OPERATOR** has met the requirements of 19.15.29 NMAC and no further corrective action is required. NMOCD considers **1RP-5239** closed.

However, this determination by the Oil Conservation Division does not relieve Operator of responsibility should future information indicate a threat to ground water, surface water, human health, or the environment. Furthermore, it does not relieve Operator of responsibility for compliance with any federal, state, or local laws and/or regulations.

Note: The NMOCD was confused by the sample information provided, as sampling is not strictly necessary when the release is completely contained. In the future please provide an associated site map and description of sampling activities to accompany sample results.

Thanks,

Dylan Rose-Coss

Mr. Rose-Coss/Ms. Weaver,

Please find the attached Closure Request for the COG Mas Federal 34A Central Tank Battery (1RP-5239) Release which occurred on 10/8/18. The closure request was originally submitted to the NMOCD District 1 Office on January 4, 2019 and resubmitted March 5, 2019. COG is requesting that you review this closure request.

Thank you,

DeAnn Grant

Subject: COG - MAS Federal 34A CTB 1 RP 5239 (10-9-18) - Closure Request

Christina and Shelly,

Here is the final inspection and information regarding the clean-up efforts performed at the above mentioned lined facility. All of the free fluids were removed and if present the impacted gravel was removed from the liner and taken to a NMOCD approved disposal facility. The liner was inspected for damage and found the liner integrity to be intact. In addition, there was some overspray (approximately 20' x 20') on the pad located on the edge of the facility. One (1) sample was collected in the over spray area and showed concentration below the Table 1 (<50 feet Closure Criteria), with BTEX concentrations above the laboratory limit, TPH of 27.3 mg/kg and a chloride of 38.3 mg/kg. Based on the liner integrity and results, the Final C-141 and pictures taken during the final inspection conducted by a COG HSE representative are attach for your review. Let me know if you need additional information or have any question, thanks
