Hello all,

The BLM would like a KMZ/shape file indicating the impact outline of this spill and its location. Did any of the lost fluids make it into previously undisturbed areas?

Delineation in previously undisturbed areas is not approved until the BLM can first cross check the area of impact and evaluate what the appropriate BLM advisement would be for this release.

Thank you,

Crystal Weaver

"3 percent of the water on this planet is considered freshwater. Of that 3 percent only 1 percent is considered accessible, meaning the majority of the remaining 2 percent is trapped in glaciers or snowfields." - National Geographic

The **BLM acceptance/approval does not** relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that may pose a threat to groundwater, surface water, human health or the environment or if the location fails to reclaim properly. In such an event that the location does not re-vegetate, or future issues with contaminants are encountered, the operator will be asked to address the issues until the contaminant issues are fully mitigated and the location is successfully reclaimed. In addition, BLM approval does not relieve the operator of responsibility for compliance with any other federal, state or local laws/regulations.

All,

Please see attached C-141 form for the release of 1,200 BBLs of produced water on the Red Hills pipeline in Lea County, New Mexico.

Additionally, OWL has ordered a land survey to be completed to delineate the release area and KJE will forward to this email chain upon receipt.

Please let me know if you have any questions.

Thank you,
