**Subject:** RE: (Resubmittal) COG Stratocaster 20 Fed #3H Work Plan Approval Request (1RP-5255)

Ms. Grant,

The NMOCD has reviewed the Work Plan for the COG Stratocaster 20 Fed #3H (1RP-5255) release which occurred on 10/22/2018. The Division approves the workplan with a few caveats:

- The Division is satisfied the areas meant to be represented by samples AH-5, AH-6 and AH-7 did not contain soils with any constituents above the recommended remedial action levels (RRAL) and that no further action is required within those areas.
- The Division agrees that because the areas represented by samples AH-3 and AH-4 contained soils with TPH concentrations above the RRAL levels, that the soils within that area should be removed and remediated.
- However, pursuant to 19.15.29.13 D (1)  
    "The reclamation must contain a minimum of four feet of non-waste containing, uncontaminated, earthen material with chloride concentrations less than 600 mg/kg as analyzed by EPA Method 300.0, or other test methods approved by the division. The soil cover must include a top layer, which is either the background thickness of topsoil or one foot of suitable material to establish vegetation at the site, whichever is greater."
- Therefore, the areas represented by samples AH-1 and AH-2 require remediation due to the reported chloride concentrations in those locations up to 1.5 ft depth.

To fulfill closure requirements for this site (1RP-5255) the NMOCD requests that all areas meant to be represented by samples AH-1 through AH-4 be remediated to 1.5 ft and that sufficient bottom and sidewall samples be taken to demonstrate compliance with NMAC 19.15.29.

Thanks,
