Mr. Rose-Coss/Mr. Mann,

Attached is the calculation sheet to determine the estimated release volume for Falcon Lined facilities and the location. The liquid lost estimate is based on the spill dimensions, estimated depth of fluid in the liner and in the soil on location. The spreadsheet will calculate the volume lost into the liner and into the soil on location. No gravel was present in this lined facility as it is a Falcon Liner. The unrecovered volume is a residue left behind on the liner and equipment which will be cleaned by pressure wash and the overspray on location. If you have any questions or concerns please do not hesitate to contact me.

Thank you,

**DeAnn Grant**

HSE Administrative Assistant
