Cory,

As discussed, the closure report was being prepared and noted one (1) sample exceeded the Table 1 Criteria for TPH (DRO and GRO) at 0-1'. Instead of preparing a work plan, COG propose scraping the area to remove the shallow impacted soil above the TPH regulatory limit. COG is requesting a 30 -45 days extension in order to conduct remediation activities and prepare a closure report. Let me know if you need additional information, thanks

Mrs. Haskell,

Per 19.15.29.11.A Operators requesting an extension to the times frames to for site characterization or remediation must provide to the Division the reasoning so the Division can determine if the request is for "good cause".

Please keep in mind that if the site cannot be fully be remediated within the 90 days only a full site characterization and work plan are required to be submitted in which the work plan could include alternative time frames for remediation.

A few questions to answer:

Has the release met all the applicable requires of 19.15.29.8.B? ie source elimination, site stabilization/containment.

Provide the reasoning as to why the release cannot be characterized/remediated within the allotted 90 days.

If you have any additional questions give me call.

Thanks,

To Whom It May Concern/Mr. Mann,

Under the new spill rule a work plan or closure report is due for the above release on 3/29/19. We are currently getting this scheduled for an at risk remediation. COG is requesting a three month extension until June 28, 2019 in order to conduct remediation activities and prepare a closure report.

**** External email. Use caution. ****

Ms. Grant:

Please be advised that

1. Provide dated, geo-referenced photo documentation for verification that the initial response activities have been employed to contain the release.
2. Per 19.15.29.13 NMAC, regulations of corresponding agencies supersede NMOCD's.

The 1RP for this incident is

5327	2/4/2019	A	COG	Boone 16 State Com #003H	30-025-41432	21S-33E-16O	12/
-------------	----------	---	-----	--------------------------	--------------	-------------	-----

Please remember to include this 1RP identifier to all communications. Revised NMAC 19.15.29 was effective on August 14, 2018. Delineate and remediate per regulation. Mind the timelines for submittal of requisite information.

Please be advised that NMOCD recommends a completed site characterization/delineation report be reviewed or approved by NMOCD BEFORE any significant remediation work towards closure.

Thanks,

Christina Hernandez

OCD approval does not relieve the operator of liability should their operations fail to adequately investigate and remediate contamination that may pose a threat to ground water, surface water, human health or the environment. In addition, OCD approval does not relieve the operator of responsibility for compliance with any other federal, state, local laws and/or regulations

Subject: [EXT] (C-141 Initial) Boone 16 State Com #003H Battery (30-025-43553) 12-29-2018

Ms. Hernandez/Mr. Mann,

Please find the attached C-141 for your consideration. Also, attached is the calculation sheet to determine the estimated release volume. The liquid lost estimate is based on the spill dimensions, estimated depth of fluid (wet soil depth) and type of formation. The spreadsheet will calculate the volume lost in the ground and does not include the recovered amount in the calculation. The calculated volume in the ground and the volume recovered were added together and reported on the C-141. If you have any questions or concerns please do not hesitate to contact me.

Thank you,

DeAnn Grant
