

*Spills Matter
When spills happen Aspen Grow is
your answer*

- ◆ **Bioremediation of Contaminated Soils**
- ◆ **Less Intrusive process**
- ◆ **Lower cost solution than Excavation**
- ◆ **Pipeline/Flowlines/Tank Batteries**
- ◆ **Landowner and Operator Communica-tions**
- ◆ **Surface Damage Assessment**
- ◆ **Soil Sampling**
- ◆ **TPH and Benzene levels determination**
- ◆ **Site Sketch Affected Areas**
- ◆ **Reseeding**
- ◆ **Moisture Monitoring**
- ◆ **Irrigation Alternatives**
- ◆ **Woman Owned Business**

Aspen Grow

Aspen Grow's approach to remediating and restoring contaminated soils to a healthy productive condition begins with rebuilding the biological health of the soil. This can be accomplished through the application of products rich in beneficial microorganisms, bio stimulants, organic acids and biologically produced enzymes and chelating agents. By restoring the population and proper ratio of beneficial micro and macro-organisms even the most contaminated soils can be revitalized to a healthy productive soil.

Environmentally Safe

The active ingredients in Aspen Grow's products are organically-based to work in harmony with nature's soil and plant systems.

Reconditions the Soil

Aspen Grow's products nourish the soil systems by supplying special humic acids, minerals and nutrients that promote the growth of natural aerobic microbes while improving the soil's structure and natural fertility.

Saves Water

Microbial action produces complex sugars which coat and bridge soil particles, breaking even hard clay soil down into an aerified crumb structure that improves water penetration and retention, and reduces runoff.

Call us today and we will remediate your spills!
