Santa Fe, NM 87505

Mr. Anderson:

Dynegy Midstream Services, L. P. is constructing two new pipelines near the Eunice Plant. One of them is a 20" line that is 8439 feet long and the other is a 16" also 8439 feet long. Both of these lines connect existing lines located approximately 1.6 miles west of the Eunice Plant to the Eunice Plant. The plant referenced is the former Eunice Warren Petroleum Gas Plant. The new lines will be hydrostatically tested using Eunice City water. B&H Construction of Eunice will do the testing. The 20" will require approximately 127,000 gallons of water and the 16" approximately 80,000 gallons of water.

As per OCD guidelines for hydrostatic test dewatering Dynegy would like a discharge permit to dump this water on Dynegy property adjacent to the Plant after analysis demonstrates the water exceeds the WQCC Regulations.

Please find attached the pipeline surveys showing line location. The water will be collected for retention in clean Frac Tanks set on sight by B&H Construction of Eunice. The groundwater in this area is approximately 175 feet deep.

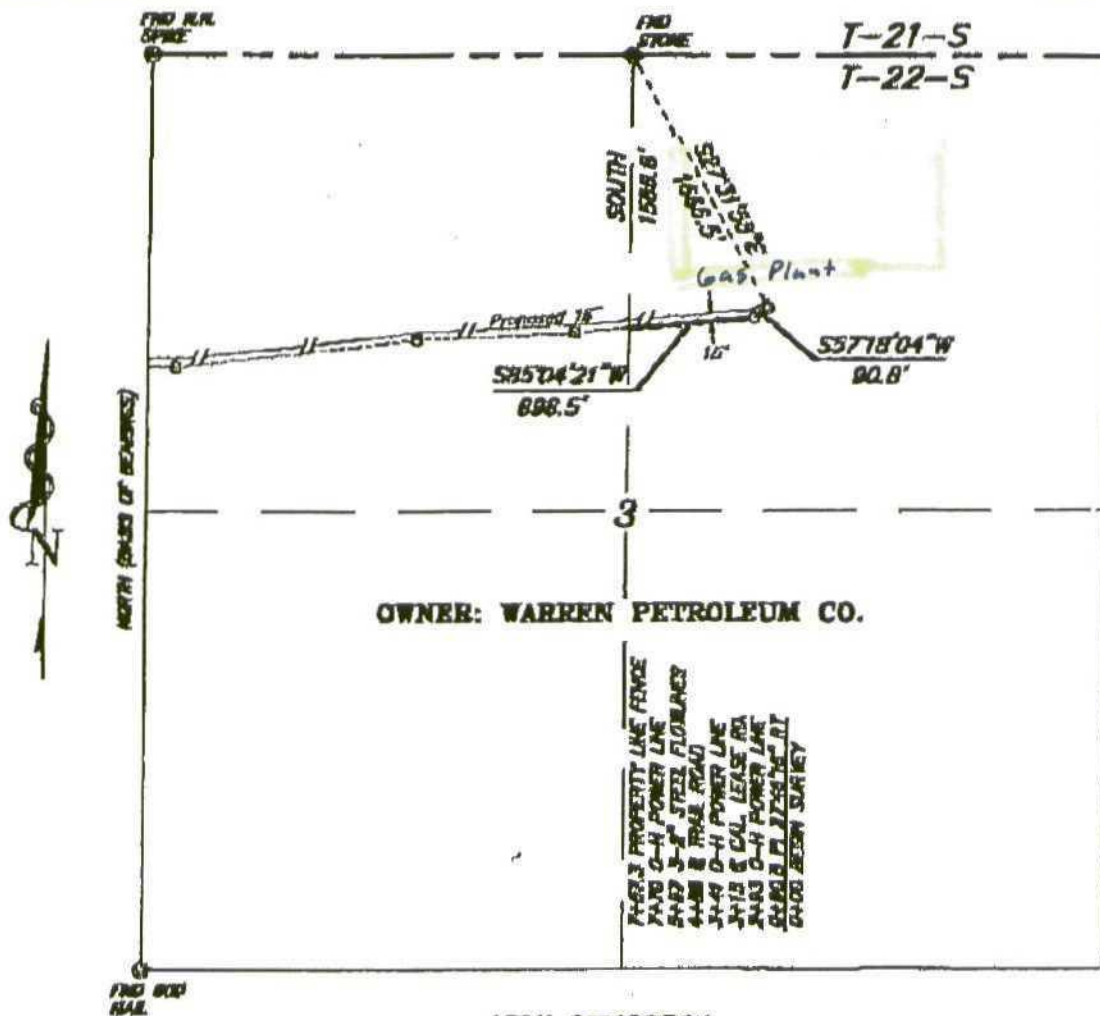

Please call with any questions (915) 688-0542.

Sincerely,

Cal Wrangham
ES&H Advisor
