Re: Hobbs Trucker's #2 Brine Station
1502 West Broadway Place
Hobbs, New Mexico

Dear Mr. Price:

Enclosed for your review you will find the Hobbs Trucker's #2 Brine Station Closure Compliance Report prepared by Terracon.

If you have any questions or wish to discuss any items contained in this report, please let me know.

Sincerely,

A handwritten signature in cursive script that reads "Jason Henry".

Jason Henry
Corporate Environmental Specialist

Re: Closure Compliance Report
Truckers # 2 Brine Station
1502 West Broadway Place
Hobbs, Lea County, New Mexico
Terracon Project No. 94057446

Dear Mr. Henry:

Terracon is pleased to submit three copies of the Closure Compliance Report for the above referenced site.

We appreciate the opportunity to participate in the site remediation project at Truckers # 2 Brine Station for Key Energy Services, Inc. Please contact either of the undersigned at (432) 684-9600 if you have questions regarding the information provided in the report.

Sincerely,

Terracon

**Closure Compliance Report
Truckers # 2 Brine Station
1502 West Broadway Place
Hobbs, Lea County, New Mexico**

Terracon Project Number 94057446

1.0 INTRODUCTION

The property consists of a brine station located in Hobbs, Lea County, New Mexico at 1502 West Broadway Place. The property is owned by Key Energy Services, Inc.

The brine station operates with a concrete loading area and brine pond. Due to structural problems with the concrete loading area, brine loading operations were temporarily relocated west of the brine pond. Loading of brine in this area impacted the surface and subsurface soils with elevated chloride concentrations.

1.1 Site Description

Site Name	Truckers # 2 Brine Station
Site Location	1502 West Broadway Place, Hobbs, Lea County, New Mexico
General Site Description	The area of concern is on a caliche pad on the west side of the brine pond. The surrounding area is oil field industrial use.

A topographic map (Figure 1) and a site map (Figure 2) are included in Appendix A.

1.2 Scope of Services

The proposed scope of work was to provide remedial efforts to satisfy the New Mexico Oil Conservation Division (NMOCD) requirements.

The scope of work of the remedial efforts was as follows:

- Excavation of the heavily chloride-impacted soils near the surface (0-3 feet bgs) and stockpile onsite, as verbally approved by Mr. Wayne Price – NMOCD;
- The excavation was subdivided into 10 sampling areas and confirmation samples were collected to determine adherence to approved cleanup standards for chlorides of <3,000 mg/kg. Based on laboratory results, further excavation as needed, of areas exceeding 3,000 mg/kg chlorides;

**Closure Compliance Report
Truckers # 2 Brine Station
Hobbs, Lea County, New Mexico
Terracon Project #94057446
October 31, 2005**

- The disposal of excavated soil at an approved landfill under manifest;
- Installation of a clay liner in the base of the excavation to prevent vertical migration of water through chloride-affected soils left in place. A Standard Proctor Survey of the clay liner using method ASTM D698, as provided to Terracon by RWI, Inc., was submitted to the NMOCD for approval prior to installation;
- Backfill and site restoration of the excavation using backfill soil subsequent to compaction.

1.3 Regulatory Framework

As reported by Mr. Wayne Price – NMOCD, Santa Fe, NM, there are no published cleanup standards for chloride affected soils in the state of New Mexico. However, Mr. Price indicated that soil impacts should be delineated to 250 milligrams per kilogram (mg/kg). Such delineation efforts have already been performed by Arcadis, Brown and Caldwell, and eTech for Key Energy. Mr. Price further stated that soils with elevated concentrations (in the general range of 1,000 to 3,000 mg/kg) could be left in place and capped with a hydraulically impervious barrier to prevent water percolation through the affected soils. Such efforts would be acceptable in the state of New Mexico to provide groundwater protection and remediate the site to the satisfaction of the NMOCD.

2.0 FIELD ACTIVITIES

2.1 Site Investigation

Previous environmental work performed by Arcadis, Brown and Caldwell, and eTech, included soil boring advancement, surface and subsurface soil sampling, and the installation of two groundwater monitoring wells. Soil samples collected within the area of impact indicate that chloride concentrations decreased with depth and the release had been vertically delineated. Groundwater is present at approximately 65 feet below ground surface (bgs). Based on a review of the data provided to Terracon by Key Energy, groundwater samples previously collected from the two monitoring wells contained chloride concentrations which slightly exceed the New Mexico Water Quality Control Commission (NMWQCC) groundwater protection limit of 250 milligrams per liter (mg/l). However, the chloride concentration reported from the groundwater sample collected from the down-gradient on-site well (327 mg/l) was lower than the concentration from an on-site up-gradient well (527 mg/l). Copies of the reports documenting the site investigations have previously been submitted to the NMOCD by Key Energy.

**Closure Compliance Report
Truckers # 2 Brine Station
Hobbs, Lea County, New Mexico
Terracon Project #94057446
October 31, 2005**

2.2 Soil Excavation

On September 20, 2005, excavation of the chloride impacted soil commenced using a John Deere 850 dozer. The area of concern, on the caliche pad to the west side of the brine pond, was flagged and measured approximately 110 feet long by 52 feet wide. Based on the site investigation data, the western half of the flagged area was excavated to approximately 26 feet wide, 115 feet long, and 12 inches below ground surface (bgs). The eastern half of the flagged area was excavated to approximately 26 feet wide, 115 feet long, and 18 to 42 inches bgs. Soil from the excavated area was stockpiled onsite adjacent to the north side of the excavation. (See Figure 2)

The excavated area was divided into ten sections for confirmation sampling. Each section was approximately 572 square feet of surface area. A four point composite sample from each section was collected and the samples were labeled BH-1 through BH-10. One five point composite soil sample was collected from each of the two stockpiles and labeled SP-1 and SP-2.

The soil samples collected were placed in laboratory prepared glassware, and relinquished to Environmental Lab of Texas in Odessa, Texas for analysis of chlorides using EPA method 300.0.

Laboratory results indicated chloride concentrations in sections BH-1 and BH-6 were above the approved cleanup standard for chlorides of 3,000 mg/kg. Further excavation of the impacted soil in these two areas was conducted on September 23, 2005. Composite confirmation samples were collected from the two areas and labeled BH-1A and BH-6A.

Laboratory results indicated chloride concentrations in the excavated area were below the approved NMOCD cleanup standard for chlorides of 3,000 mg/kg. A summary table of analytical results and the Laboratory Analytical Reports are contained in Appendix B.

2.3 Soil Sampling

Terracon's soil sampling program included the collection of 12 confirmation soil samples from the impacted area and two stockpile soil samples of the excavated material transported to the disposal facility. The soil samples were analyzed for chlorides using EPA method 300.0.

The soil samples collected were placed in laboratory prepared glassware, sealed with custody tape and placed on ice in a cooler which was secured with a custody seal. The sample and completed chain-of-custody form was relinquished to Environmental Lab of Texas in Odessa, Texas for analysis. The executed chain-of-custody forms and laboratory data sheets are provided in Appendix B.

Closure Compliance Report
Truckers # 2 Brine Station
Hobbs, Lea County, New Mexico
Terracon Project #94057446
October 31, 2005

2.4 Liner Installation, Backfilling, and Disposal

The clay used for the liner installation was purchased from Wallach, Inc. in Eunice, NM. A Standard Proctor Survey of the clay soil, using method D698 (as provided to Terracon by RWI, Inc.) from Wallach, was approved by Mr. Wayne Price of the NMOCD on September 7, 2005, prior to installation. The clay liner was installed in four to six inch lifts and watered and compacted using heavy equipment. Approximately 120 cubic yards of clay was used for the liner installation. In sections BH-1A through BH-5 a final compacted layer of three to four inches of clay was placed in the base of the excavation. In sections BH-6A through BH-10 a final compacted layer of five to six inches of clay was placed in the base of the excavation. The clay liner was installed in an effort to provide a hydraulically impervious cap over the chloride impacted soil left in place.

Backfill soil from RWI, Inc. was transported to the site using dump trucks and spread in four to six inch lifts and compacted using heavy equipment. The excavated area was returned to grade and slightly mounded to redirect precipitation away from adjoining property. Approximately 480 cubic yards of backfill soil was used for site restoration.

The excavated material was transported to Sundance Landfill (Sundance) in Eunice, New Mexico using covered dump trucks. Each load delivered to Sundance was accepted and signed for by a facility representative. Approximately 664 cubic yards of material was transported and accepted by Sundance. Copies of the manifests are included in Appendix D.

Photographs documenting the remediation activities are contained in Appendix C

3.0 DATA EVALUATION

Twelve confirmation soil samples were collected in the excavated area and two stockpile soil samples were collected from the excavated material transported to the disposal facility. The laboratory results from the confirmation soil samples collected in the excavated area indicated chloride concentrations ranging from 1,280 mg/kg to 2,840 mg/kg. The laboratory results from the soil samples collected from the excavated material transported to the disposal facility indicated chloride concentrations of 8,860 mg/kg and 2,690 mg/kg.

4.0 FINDINGS AND CONCLUSIONS

Terracon respectfully submits this closure compliance report on behalf of Key Energy Services, Inc. Based on results of our field activities and laboratory analyses, the NMOCD approved cleanup

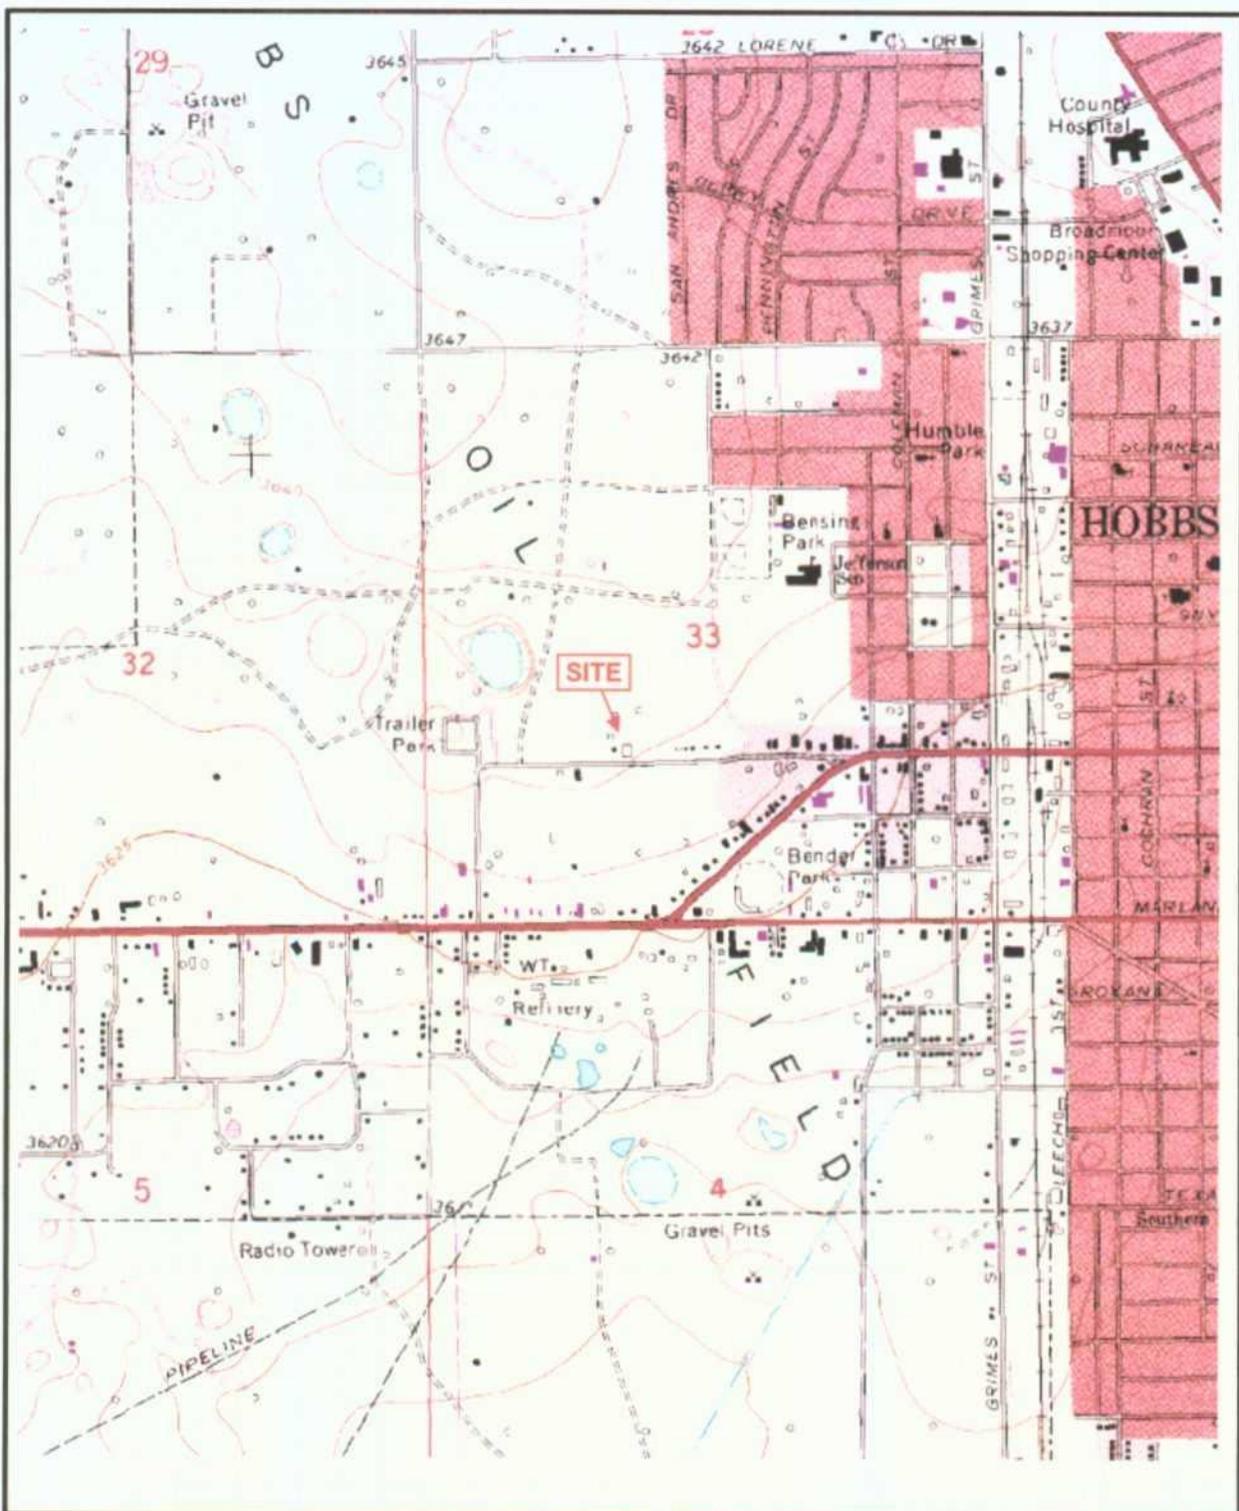

**Closure Compliance Report

standard for chlorides of <3,000 mg/kg, as verbally approved by Mr. Wayne Price, has been achieved. The excavation bottom was capped with a clay liner and the site restored to grade using caliche backfill, pursuant to Mr. Price's direction.
