RE: River Terrace - 12/05

Order No.: 0512175

Dear Cindy Hurtado:

Hall Environmental Analysis Laboratory received 2 samples on 12/14/2005 for the analyses presented in the following report.

These were analyzed according to EPA procedures or equivalent.

Reporting limits are determined by EPA methodology. No determination of compounds below these (denoted by the ND or < sign) has been made.

Please don't hesitate to contact HEAL for any additional information or clarifications.

Sincerely,

Andy Freeman, Business Manager
Nancy McDuffie, Laboratory Manager

RE: Giant Refining Company, Bloomfield Refinery
EPA ID# NMD089416416
GW - 001

Dear Mr. Price,

Please find attached analytical results for the October 19, 2005 and November 9, 2005 sampling events for Tank #33 Effluent and the Fresh Water Ponds at the Giant Refining - Bloomfield facility. Note that the results for Tank #33 had a detection of benzene at a concentration of 0.93 ug/L for October and 0.61 ug/L for November. BTEX samples were taken from the fresh Water Pond outlet during each sampling event. The results of both of those samples were non detect. We will continue to monitor Tank #33 Effluent on a monthly basis and evaluate the concentration trends.

The fourth quarter 2005 sampling event for the San Juan River was conducted October 24, 2005. Analytical results are enclosed with this packet. There was not an exceedance of any WQCC standard or EPA maximum contaminant level during this sampling event.

If you need additional information, please contact me at (505) 632-4161.

Sincerely,

A handwritten signature in cursive script that reads "Cindy Hurtado".

RE: TK #33 - Effluent-10/05

Order No.: 0510199

Dear Cindy Hurtado:

Hall Environmental Analysis Laboratory received 2 samples on 10/20/2005 for the analyses presented in the following report.

These were analyzed according to EPA procedures or equivalent.

Reporting limits are determined by EPA methodology. No determination of compounds below these (denoted by the ND or < sign) has been made.

Please don't hesitate to contact HEAL for any additional information or clarifications.

Sincerely,

Andy Freeman, Business Manager
Nancy McDuffie, Laboratory Manager

RE: Giant Refining Company, Bloomfield Refinery
EPA ID# NMD089416416
GW - 001

Dear Mr. Price,

Please find attached analytical results for the September 21, 2005 and October 4, 2005 sampling events for wells MW #48 and MW #49 located on the river terrace at the Giant Refining-Bloomfield facility. Note that the results for well MW #49, located down gradient of the barrier wall, had a detection of benzene at a concentration of 28 ug/L for September and 13 ug/L for October. BTEX samples were taken out of the San Juan River adjacent to MW #49 during each sampling event. The results of both of those samples were non detect. We will continue to monitor both wells on a monthly basis and evaluate the concentration trends.

If you need additional information, please contact me at (505) 632-4161.

Sincerely,

Cindy Hurtado

RE: River Terrace 9/05

Order No.: 0509241

Dear Cindy Hurtado:

Hall Environmental Analysis Laboratory received 3 samples on 9/22/2005 for the analyses presented in the following report.

These were analyzed according to EPA procedures or equivalent.

Reporting limits are determined by EPA methodology. No determination of compounds below these (denoted by the ND or < sign) has been made.

Please don't hesitate to contact HEAL for any additional information or clarifications.

Sincerely,

Andy Freeman, Business Manager
Nancy McDuffie, Laboratory Manager

Bloomfield, NM 87413
TEL: (505) 632-4161
FAX (505) 632-3911

RE: River Terrace - 10/05

Order No.: 0510030

Dear Cindy Hurtado:

Hall Environmental Analysis Laboratory received 3 samples on 10/5/2005 for the analyses presented in the following report.

These were analyzed according to EPA procedures or equivalent.

Reporting limits are determined by EPA methodology. No determination of compounds below these (denoted by the ND or < sign) has been made.

Please don't hesitate to contact HEAL for any additional information or clarifications.

Sincerely,

Andy Freeman, Business Manager
Nancy McDuffie, Laboratory Manager

Re: **River Samples**

Dear Mr. Price,

Giant Refining Company – Bloomfield Refinery conducted river sampling events per the "Monitoring and Contingency Plan". Enclosed in this packet is the hardcopy of the analysis of samples taken from December 7, 2004. There was not an exceedance of any WQCC standard or EPA maximum contaminant level during the monitoring event.

GRC – Bloomfield has completed four months of sampling with results that indicate no evidence of pollutants in the San Juan River. As per the Monitoring and Contingency Plan issued in August 2004, GRC – Bloomfield will reduce the river sampling frequency to quarterly.

Please contact me if you have any questions.

Sincerely,

Cindy Hurtado

RE: River Sampling December 2004

Order No.: 0412087

Dear Cindy Hurtado:

Hall Environmental Analysis Laboratory received 4 samples on 12/8/2004 for the analyses presented in the following report.

These were analyzed according to EPA procedures or equivalent.

Reporting limits are determined by EPA methodology. No determination of compounds below these (denoted by the ND or < sign) has been made.

Please don't hesitate to contact HEAL for any additional information or clarifications.

Sincerely,

Andy Freeman, Business Manager
Nancy McDuffie, Laboratory Manager

RE: River Sampling December 2004

Order No.: 0412103

Dear Cindy Hurtado:

Hall Environmental Analysis Laboratory received 2 samples on 12/9/2004 for the analyses presented in the following report.

These were analyzed according to EPA procedures or equivalent.

Reporting limits are determined by EPA methodology. No determination of compounds below these (denoted by the ND or < sign) has been made.

Please don't hesitate to contact HEAL for any additional information or clarifications.

Sincerely,

Andy Freeman, Business Manager
Nancy McDuffie, Laboratory Manager

Corrective Action _____

REFINING COMPANY

CERTIFIED MAIL # 7099 3220 0010 2242 4863

January 11, 2005

Mr. Wayne Price
New Mexico Oil Conservation Division
1220 S. Saint Francis Drive
Santa Fe, New Mexico 87505

Re: Giant Bloomfield Refinery – OCD Conditional Approval of North Boundary
Barrier Corrective Action Plan

Dear Mr. Price:

Giant received the December 17, 2004 letter from the New Mexico Oil Conservation Division (OCD) stating OCD's conditional approval of the November 17, 2004 Corrective Action Plan (CAP) submitted by Giant for the Bloomfield facility. The purpose of this letter is to provide OCD with the anticipated starting date of the barrier construction and to respond to several of the conditions stated in OCD's letter.

Giant has entered into a contract with Remedial Construction Services, L.P. (RECON) to construct the north boundary barrier. RECON, based in Houston, Texas, is a contractor that specializes in the construction of barrier walls for environmental applications. RECON is tentatively scheduled to mobilize to the Bloomfield refinery the week of January 17, 2005, with barrier excavation activities expected to begin the following week. Construction is anticipated to be completed by the end of March 2005. Giant's environmental consultant (Malcolm Pirnie) will provide a senior geotechnical engineer and a full-time resident engineer to oversee and document the barrier construction activities. The barrier type will be a soil-bentonite slurry wall with permeability less than or equal to 1×10^{-7} cm/sec and a minimum thickness of 30 inches.

Response to OCD Conditions of Approval

The following responses correspond to the conditions in OCD's December 17, 2004 approval letter.

1. Condition accepted by Giant.

PHONE
505-632-8013
FAX
505-632-3911

2. Giant initially planned to key the barrier wall 5 feet into the Nacimient Formation. However, discussions with a local excavation contractor with experience at the site revealed that achieving a 5-foot key depth using conventional excavation equipment is improbable without using rock-sawing and impact-hammer techniques. Further, hydraulic conductivity testing of samples taken from the Nacimient Formation along the barrier alignment indicates the formation is essentially impervious to water migration in its upper one-foot interval (soil boring SB2-1004, permeability of 6×10^{-7} cm/sec at a depth of 12.0 to 12.5 feet below ground surface (bgs); soil boring SB5-1004, permeability of 1.2×10^{-9} cm/sec at 9.5 to 10.5 bgs). Refer to the November 11, 2004 investigation report by Precision Engineering (Appendix A of CAP) for the testing results. An annotated test results summary table is included with this letter (Attachment A).

Based on the conditions noted above, the construction specifications for the barrier state the following requirements to minimize the potential underflow of fluids: The slurry wall shall be constructed with a minimum key-in depth of 3 feet into the Nacimient Formation or until refusal is met, whichever is less in depth. Refusal shall be defined as 3 passes for a horizontal distance of 5 feet with less than 0.2 feet of total penetration. Passes shall be made utilizing 90 percent of the manufacturer's maximum-rated down pressure and breakout power of the excavator. The excavator shall have a minimum rated gross power of 140 horsepower.

Flow net analyses are typically used to model seepage through earthen embankments (e.g., dams) and beneath impervious barriers (e.g. sheet pile and clay-material walls) where porous media flow conditions exist under appreciable hydraulic head. Since the proposed soil-bentonite wall will have a permeability less than or equal to 1×10^{-7} cm/sec, and the Nacimient Formation into which it will be keyed is less permeable, any seepage, if it occurs, will not be through porous media exhibiting Darcy's Law behavior. As such, it is Giant's opinion that a flow net analysis is not technically applicable in this case and will not add technical benefit towards understanding seepage potential.

Giant believes that seepage beneath the wall will be insignificant for these reasons:

- A) The groundwater seeps that have been observed and documented at the river bluff indicate that fluid movement is restricted to the sand and gravel deposits (Jackson Lake Terrace) at the interface of the Nacimient Formation. No seepage has been observed from within the Nacimient Formation. This observation is consistent with Precision Engineering's conclusion that the Formation does not contain or transmit water. (Appendix A of CAP).
- B) Groundwater levels measured in piezometers installed along the proposed barrier alignment show there is generally one foot of water or less on the top of the Nacimient Formation. This is an inappreciable amount of hydrostatic head.

C) The quantity of flow migrating from the facility to the river bluff in the Jackson Lake Terrace gravels (across the entire proposed slurry wall alignment - over 2,600 feet in length) has been estimated (using the Darcy equation) to be less than 20 gallons per minute. This estimate assumes a saturated thickness of 2 feet on top of the Nacimientto Formation (greater than measured), a uniform gradient, and a moderate Jackson Lake Terrace permeability. This relatively low quantity of flow is consistent with the observed "isolated seeps" at the river bluff. As such, the amount of water anticipated to accumulate against the barrier is low.

D) It appears the flow in the gravels at the interface of the Nacimientto Formation is controlled by the surface topography of the Formation and is not a uniform flow through the Terrace Gravels. Therefore, fluids that exist at the interface tend to migrate to low elevations in the top of the Nacimientto Formation and move along depressional troughs. These depressions will be targeted for fluids collection points that will be used to control hydrostatic head against the barrier. It is unlikely that water will accumulate along the full length of the barrier.

G) The hydrostatic head against the barrier at the collection points, even in a worst-case scenario (i.e., no fluid collection system), cannot exceed approximately 4 to 5 feet due to the hydraulic relief drain that exists beneath the Hammond Ditch. This small hydraulic head would not be sufficient to cause seepage beneath the wall through the Nacimientto Formation and would not likely cause seepage through the soil-bentonite barrier, even with its' higher permeability.

3. The barrier type will be a soil-bentonite slurry wall with permeability less than or equal to 1×10^{-7} cm/sec and a minimum thickness of 30 inches. The construction specifications require the soil-bentonite backfill mix design to be approved by Malcolm Pirnie. The specifications also require industry-standard quality control testing by the contractor during construction and verification permeability testing by an independent third-party laboratory.
4. As-built drawings and photo documentation are included in the construction procedures and will be provided to OCD as requested. Daily logs will be kept by the full-time on-site resident engineer.
5. Weekly progress reports and photos will be provided as requested.
6. Giant anticipates installing the fluid collection points in the second quarter of 2005 after construction of the barrier is complete. The contour of the Nacimientto Formation along the barrier alignment will be surveyed during construction to aid in locating collection points. A fluid collection system design will be submitted to OCD for approval prior to installation of the collection points.
7. A senior geotechnical engineer and a full-time resident engineer from Malcolm Pirnie will oversee and document the barrier construction activities. Due to the character of the Jackson Lake Terrace soils, a slurry trench excavation method will be used. As such, collection of representative soil samples from the trench at

prospective collection system locations is not technically possible. If these soil samples are necessary, Giant proposes they be obtained separately after barrier construction.

8. RECON will prepare a detailed construction activity schedule and Giant will provide a copy to OCD prior to start of construction. The schedule will be reviewed weekly during construction progress meetings and revisions will be made as necessary. Schedule changes will be communicated to OCD on a weekly basis.
9. Giant anticipates developing a monitoring plan concurrent with the collection system design. Conceptually, the plan will be based on monitoring hydraulic conditions on both sides of the barrier at locations where fluid accumulation is anticipated. The monitoring plan will be submitted to OCD for approval.

If you have any questions in this matter, please contact me at 505-632-4171.

Sincerely,

GIANT REFINING COMPANY

Release North of MW#45 Progress Report

Weekly Progress

On 9/29/2004 Giant-Bloomfield was directed to take an additional river water sample 100 yards downstream of any draw area and include this sample point in future sampling events. This river sample was taken on 9/30/2004 and sent to Hall Environmental labs for analysis. The sample came back "Non-Detect" for BTEX and TPH (results are attached). This sampling point will be included in the "Monitoring and Contingency Plan". Giant continues to monitor all the draws along the property boundaries.

Giant continues to work with Malcom Pirnie on the Engineering and Design of a cut system.

COVER LETTER

RE: River Downstream

Order No.: 0410010

Dear Cindy Hurtado:

Hall Environmental Analysis Laboratory received 1 sample on 10/1/2004 for the analyses presented in the following report.

These were analyzed according to EPA procedures or equivalent.

Reporting limits are determined by EPA methodology. No determination of compounds below these (denoted by the ND or < sign) has been made.

Please don't hesitate to contact HEAL for any additional information or clarifications.

Sincerely,

Andy Freeman, Business Manager
Nancy McDuffie, Laboratory Manager

HALL1829_000.pdf

Wayne, here's is the electronic copy of the second set of river samples taken on 9/7/04. The cover page indicates that Hall received 4 samples. The extra sample is a trip blank that is used for quality control. I will follow this up by mailing you the hard copies from both sampling events.

RE: River Sampling Sept 2004

Order No.: 0409062

Dear Cindy Hurtado:

Hall Environmental Analysis Laboratory received 4 samples on 9/8/2004 for the analyses presented in the following report.

These were analyzed according to EPA procedures or equivalent.

Reporting limits are determined by EPA methodology. No determination of compounds below these (denoted by the ND or < sign) has been made.

Please don't hesitate to contact HEAL for any additional information or clarifications.

Sincerely,

Andy Freeman, Business Manager
Nancy McDuffie, Laboratory Manager

Re: **RIVER SAMPLES**

Dear Mr. Price,

Giant Refining Company – Bloomfield Refinery conducted river sampling events per the "Monitoring and Contingency Plan". Enclosed in this packet is the hardcopy of the analysis of samples taken from October 7, 2004.

River samples were pulled again on November 3, 2004 and the analysis will be forwarded on to you when it is completed.

Please contact me if you have any questions.

Sincerely,

Cindy Hurtado

RE: River Sampling October 2004

Order No.: 0410074

Dear Cindy Hurtado:

Hall Environmental Analysis Laboratory received 5 samples on 10/8/2004 for the analyses presented in the following report.

These were analyzed according to EPA procedures or equivalent.

Reporting limits are determined by EPA methodology. No determination of compounds below these (denoted by the ND or < sign) has been made.

Please don't hesitate to contact HEAL for any additional information or clarifications.

Sincerely,

Andy Freeman, Business Manager
Nancy McDuffie, Laboratory Manager

RE: Giant Refining Company, Bloomfield Refinery
EPA ID# NMD089416416
HWB-GRCB-01 001

Dear Gentlemen,

This letter is notification that you requested. Giant Refinery – Bloomfield will be collecting semi-annual groundwater samples starting the week of August 16, 2004.

Please note that if any representatives from the NMED Hazardous Waste Bureau or New Mexico Oil Conservation Division would like to participate, Giant requires all incoming personnel to undergo safety orientation training before entering the plant.

If you need additional information, please contact me at (505) 632-4171.

Sincerely,

Randy Schmaltz
Environmental Supervisor
Giant Refining – Bloomfield

Cc: Denny Foust – New Mexico Oil Conservation Division – Aztec
Ed Riege – Environmental Superintendent – Giant Refining
